Request the help of an advisor of your Knowledge Transfer Office (KTO)

This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 3.0 Unported License except the illustrations.
In response to a request from researchers, the LIEU Network has developed an interactive guide enabling any researcher, new or experienced, to have an overall view of the process leading to knowledge transfer and to have concise summarised information at each step.

By making the process of research promotion more transparent and accessible, the LIEU Network hopes to see more initiatives among universities and Higher Education Institutions (HEI) leading to knowledge transfer within civil society.

1 Via the Knowledge Transfer Offices (KTOs) of the universities and HEI of the Fédération Wallonie-Bruxelles (SynHERA, UCL, ULB, ULiege, UMONS, UNamur, USL-B)

The information in this guide is necessarily summarized and not exhaustive. Also, do not hesitate to contact us to find out more.

Finally, this guide only makes sense if it is really useful to you: all your suggestions for improvements are therefore welcome!

Have fun surfing and reading!

Important note: many links allow you to move around inside this guide. If you use Foxit Reader, don’t forget to activate the hand tool function. This is not necessary with Adobe Reader.
If knowledge transfer is envisaged, scientific publication should be done in agreement with the KTO.

**TOOLS AVAILABLE TO RESEARCHERS DURING KEY STEPS OF THE KNOWLEDGE TRANSFER**

- **R&D**
  - Call for projects
  - Setting-up and submission of projects
  - Project launch

- **KNOWLEDGE TRANSFER**
  - PROTECTION OF RESULTS?
  - Material Transfer Agreement
  - Call for projects
  - Setting-up and submission of projects
  - Project launch
  - Project monitoring

- **SPIN-OFF**
  - Fundraising
  - Business Plan

  - Business Model Canvas

- **LICENCE**
  - Negotiation
  - Business Model
  - Partnership research

- **RESEARCH CONTRACT**
  - Transfer or collaboration opportunities
  - Copyright protection
  - Patent
  - Designs or models

**FOCUS AREA**
- Patent as a source of information
- Valuation of computer software
- Partnership research
- Distribution strategy
- Marketing strategy
- Technology Readiness Level
- Prior art searching
- Invention disclosure form
- Software disclosure form
MATERIAL TRANSFER AGREEMENT

MTA – Material Transfer Agreement

WHAT IS AN MTA?

The MTA (Material Transfer Agreement) is a contract governing the transfer of material between two parties, whether public or private usually for research purposes only.

It defines the terms and conditions of the transfer of material, including those regarding ownership of the material and its modifications. Such a contract also defines the terms of use, of publication, and those related to confidentiality, etc.

IN RESPECT OF WHAT?

→ For any shipment or receipt of material used generally for research purposes
→ For all types of material

BACTERIA STRAINS • HYBRIDOMAS • ANTIBODIES • CELL LINES

SOFTWARE • SOURCE CODE • DATA

ANIMAL MODELS • TISSUES • PLASMIDS • PEPTIDES • BIOLOGICAL SAMPLES

Do you receive or provide material from research?

The MTA defines the TERMS AND CONDITIONS of the transfer of material!
The research project relying on the use of the material and the objectives pursued to limit the permitted use of the material within this framework, i.e.:

- ownership of the transferred material
- ownership of modifications, discoveries and inventions made by the receiving party
- the conditions of use that the receiving party is entitled to do (manipulations, improvements, etc.)
- the persons authorised to use the material
- confidentiality related to the material, for example in the case where a patent application is being considered
- the conditions related to scientific publications that may be written about the material
- Liability for damages which may arise from use of the material

As soon as there is a possibility of exchanging the material.

You should then contact your KTO as soon as possible because the agreement must be concluded before the transfer of any material between the providing and the receiving organisations.

The MTA is negotiated by your KTO.

It may be drafted by your KTO or proposed by the external providing party in which case your KTO will anyway carefully review such a contract.

The MTA is concluded between legal entities.

Within the Academic institution, it is signed by the legal representative authorised to engage the academic institution (Rector) and by the recipient researcher.

THE PATENT AS A SOURCE OF INFORMATION

- Direct your R&D strategies
- Get to know the research teams in a field
- Determine emerging, promising technologies
- Search for precise technical information
- Discover potential partners, monitor your competitors
- Identify new players entering the market
- Define market trends and opportunities

WHY?

PATENTS = AVAILABLE INFORMATION

The patent is an industrial property right which gives the patent owner the exclusive right to exploit an invention and exclude others from so doing as from a certain date and for a limited period. In return, the technical information relating to the invention must be disclosed in the patent application so that anyone can reproduce it. Patent applications are published 18 months after the filing date.

Patent applications contain technical, economic and legal information.

* The claims define the scope of the legal protection
The Patent as a Source of Information

How?

Scope of the search

Search in patent databases

Structured data
Classification codes, references, etc.

Unstructured data
Documents: abstracts, descriptions, etc.

Images

Tools for extracting and viewing data

Gathering information

Statistical analyses, documents, etc.

Sets of patents (applications or granted)

These databases allow you to process information contained in patents through statistics.
What could block my research?

It is important as soon as possible to identify in which context your software will be distributed: commercially? open source? This choice has a strong impact on your research as it could open or close doors. It will also help you identify what you should or shouldn’t do in terms of collaboration, code reuse, and distribution.

Here are some examples of problematic situations you must be aware of:

If part of the code belongs to an external partner, this partner has the right to veto any project that includes the software, be it a research programme or a commercialisation.

In every research project, try to keep the software property undivided.

Once all or part of the software has been licenced with exclusive rights, or is developed under confidentiality, the licencee can block future collaboration research.

Try to keep confidentiality on data, not on code (nor algorithm or methods) and limit exclusivity by sector and geographic zone.

If you include open source code, check the licence beforehand: some licences may prevent you from distributing a proprietary software.

If you want to keep your know-how private (proprietary code), integrate only open source code with a permissive licence: MIT, BSD, Apache, (LGPL), etc.

If you include code with different open source licences, beware of legal incompatibility between those licences (e.g.: GPLv2 and Apache are incompatible). This could prevent you from distributing your software (even free, even with source code, etc.).

Choose a licence as soon as you begin developing the software, and choose to integrate only open source code with a compatible licence (see chart).
Version control system (Git, SVN, Mercurial, etc.)
As soon as you start, store all your code in a Version control system (Git, etc.). This will allow to:
• Easily collaborate and keep track of every contribution
• Make reproducible science (identify the specific version linked to a publication)

Source code header
Start all your code files with a Copyright and Licence header. These examples should be adapted to each case:

- **GPL**
- **MIT**
- **Proprietary (commercial)**

**PROTECTION**

Don’t forget: only the institution is entitled to protect Intellectual Property.

- **Copyright**: protects the form (source code).
- **Patent**: protects functionality (~algorithm). And yes, software is patentable, even in Europe.
- **Trademark and domain name**: protects reputation.
- **Confidentiality agreement**: necessary for collaborating on proprietary software.
- **Industrial design**: protects original graphic interface.
- **Sui generis law on databases**: protects the investment necessary to obtain a quality database.

**GOOD CODING PRACTICES**

**Tools**

- **FOSSOLOGY**: Software which detects open source in code files
- **SONARQUBE**: Software which analyses code to provide quality metrics
- **SOFTWARE QUALITY METRICS EXPLAINED**: Report on how to understand those metrics
- **SOFTWARE DISCLOSURE FORM**: A preparation to a first meeting about your software with your KTO
- **THE RESEARCHER'S GUIDE FOR CREATING SOFTWARE**: Guidelines mainly about software protection, and the use of open source.

**MORE INFORMATION**

- Licence Families
- Compatibility Chart
- Free and Open source
- Distribution

BEFORE ANYTHING ELSE...

Any transfer involving code requires the origin and the status of the software components to be established and any components that may require a rewrite to be identified. The use of some external libraries can, for example, compromise the marketing scheme being considered.

This can also have a significant impact on

THE DISTRIBUTION OF THE SOFTWARE

Key points to consider in developing a marketing strategy:

1. **REVENUE:**
   free, freemium, fixed payment, etc.

2. **ARCHITECTURE:**
   software, mobile app, cloud/SaaS service, etc.

3. **INTELLECTUAL PROPERTY:**
   patent protection, business commercial secrecy, open source, etc.

4. **CHANNEL:**
   third-party company, spin-off, service delivery, online platform, etc.

5. **PRODUCT**
   software, consultancy, hardware/software hybrid solution

6. **REFERRED RETURN**
   economic revenue, visibility, societal impact, etc.

A well thought-out (software) marketing strategy increases the impact and the visibility of your research!
Pricing has to rely on the usual methods, and in particular a market study, a comparative analysis of the competition... There is no universal method for estimating the value of a piece of software. It is also common to combine several evaluation criteria, which are not necessarily specific to the software. It is also usual practice to base it on the following criteria:

- **NPV** (Net Present Value)
  This allows a calculation of the value of a technology based on a financial plan, which requires some knowledge of the market.

- **benchmark**
  This allows a royalty rate to be offered based on the rates usually observed in similar transactions. Alternatively, you can also set a royalty rate based on the percentage of the budget allocated to R&D in the company or sector under review.

- **Replication cost**
  An estimation of the number of men multiplied by the months required for a competitor to redevelop the technology from scratch.

Compensation mechanisms are varied:

- royalties
- up-front
- milestones
- collaboration prospects
- etc.

### WHAT BUSINESS MODEL SHOULD YOU CHOOSE?

1. The quality and relevance of a **Business Model**
   - is measured by its relevance to the needs of the market
   - requires analysis of the expectations of the end users
   - must rely on the strengths of the developed solution

2. Examples of business model

<table>
<thead>
<tr>
<th>Proprietary</th>
<th>The creator sets the price of his product</th>
<th>Windows</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dual Licencing</td>
<td>Paid version supported by a free community version</td>
<td>MySQL</td>
</tr>
<tr>
<td>Value-added service</td>
<td>Sale of intellectual services in all their forms: advice, expertise, package development, in-house, TMA</td>
<td>Odoo</td>
</tr>
<tr>
<td>In-app purchases</td>
<td>Free application with additional paid features</td>
<td>Candy Crush</td>
</tr>
<tr>
<td>Software as a service (SaaS)</td>
<td>Application available online via subscription</td>
<td>Office365</td>
</tr>
<tr>
<td>Subscription</td>
<td>Pricing based on the volume of data exchanged/stored</td>
<td>Amazon Cloud</td>
</tr>
</tbody>
</table>

### WHAT METHODS CAN YOU USE TO SET THE PRICE?

Pricing has to rely on the usual methods, and in particular a market study, a comparative analysis of the competition... There is no universal method for estimating the value of a piece of software. It is also common to combine several evaluation criteria, which are not necessarily specific to the software.

*It is also usual practice to base it on the following criteria:*

- **NPV** (Net Present Value)
  This allows a calculation of the value of a technology based on a financial plan, which requires some knowledge of the market.

- **benchmark**
  This allows a royalty rate to be offered based on the rates usually observed in similar transactions. Alternatively, you can also set a royalty rate based on the percentage of the budget allocated to R&D in the company or sector under review.

- **Replication cost**
  An estimation of the number of men multiplied by the months required for a competitor to redevelop the technology from scratch.

### TOOLS

The **COCOMO II method** estimates the value of software based on the development budget calculated from the number of lines of code (replication cost), from which technical debt is usually drawn.

TECHNOLOGY READINESS LEVEL
A scale of maturity and a tool to help innovate and collaborate

“What?”

Originating in the aerospace sector, the concept of TRL is a means to manage the development of a technology toward a practical application. Transposed to research, this tool will help you launch successful collaborative projects.

Comprising 9 levels corresponding to validation phases, it is generally divided into 3 time periods based on the predominant character of the work at a given time in the innovation process.

TECHNOLOGY READINESS LEVELS

EXPLORATION MARKET ORIENTATION EXPLOITATION

Share the same language to assess the levels of maturity of a project
TECHNOLOGY READINESS LEVEL

A scale of maturity and a tool to help innovate and collaborate

The TRL concept is very useful since it provides a common reference framework for defining and evaluating objectives, risks and investments by the parties involved in a collaborative project.

The partners agree on a starting point at the outset of a project and together define the level of maturity to be reached within the scope of their collaboration, and the tasks to be undertaken.

It is therefore primarily a communication tool used for more effective collaboration by the partners in an innovation process, including enterprises, researchers but also financial backers. Indeed, identification of adequate funding can be more easily defined based on the levels of maturity to be passed through in the course of a project.

The generic scale presented here can of course be adapted using vocabulary specific to the area of collaboration and the partners’ circumstances.

**SUCCESSFUL PRODUCT**

9. Product suitable for different applications and subject to competitive production

**MARKETED PRODUCT**

8. Complete, clearly qualified commercial product is available

**MANUFACTURED PRODUCT**

7. Product demo approved in an operational environment

**PRODUCT DEMO**

6. Product demo approved in a meaningful environment performing in a similar way to expectations

**PROTOYPE PRODUCT**

5. Prototype approved for all of its critical functions in a meaningful environment

**INTEGRATIVE PROTOTYPE**

4. Prototype incorporating the solution approved in the laboratory

**FEASIBILITY**

3. Proof of concept for the solution/application and feasibility study

**INVENTION**

2. Concept of the solution and/or the application formulated

**IDEA**

1. Basic principles observed and described

Based on a work carried out by the LIEU (Liaison Entreprises-Universités) Network and AEI (Agence pour l’Entreprise et l’Innovation)

**CONTACT**

Why?
To launch a research project, file a patent application, identify partners or competitors, and to assess freedom to operate.

What is a patent?
A patent is a right of ownership granted by a public authority on a geographical territory and for a determined period. This official right gives the patent owner the right to prohibit a third party from exploiting - in other words manufacturing, using, marketing and/or importing - the protected invention without the owner’s authorization.

Patent = technical solution to a technical problem

What are the conditions for an invention to be patentable?
- Novelty
- Inventive step
- Industrial applicability

What is prior art searching?
Prior art searching involves determining the state of the art, in other words all the information, patents or other publicly available sources before the filing date of an application.

Given that patents (currently several tens of millions of applications) contain a large amount of technical information that cannot be found anywhere else, patent databases are essential tools for effective state of the art analysis.

80% of the world’s technical information is only to be found in patents!
1) Conduct a prior art search BEFORE filing a research project or patent application.

2) Define the technical problem you want to resolve.

3) Stay alert to everything that is/has been published by third parties or by inventors themselves! (patent application, scientific article, presentations by public speakers, article in non-specialist journal, invention exhibition at a trade show, commercialization of inventions, etc.) since these form part of the state of the art and are therefore likely to kill the novelty and/or inventiveness of an invention.

4) Know the state of the art in the field in question so that you can distinguish what is commonly known from what will be innovative.

5) Prepare your research strategy by combining various search parameters: key words, classification codes, names of applicants (partners, competitors) or of inventors and citations. Adapt it using an iterative process based on documents found. Document it so that you don’t lose the main thread!

6) Use public databases that are free to use (or free in part) as a first line approach.
   - PatentInspiration
     http://www.patentinspiration.com
   - Esp@cenet
     http://worldwide.espacenet.com
   - Google Patents
     https://patents.google.com
   - PatentScope
     http://www.wipo.int/patentscope/search/en/search.jsf

7) Complete the information with the help of a an advisor or specialist organization such as PICARRÉ.
**USE THE LABORATORY NOTEBOOK WITHOUT MODERATION**

*Your research down in black and white!*

---

**Traceability tool:** the researcher’s and the laboratory’s memory

**Legal tool:** evidences

**Scientific tool:** log book

---

**WHOM DOES IT AND FOR WHOM?**

- Each researcher (including students) should have their own lab notebook to RECORD AND DATE their research experiments and findings.

- The lab notebook must be signed by the researcher AND countersigned by the promoter.

- The book remains within the laboratory and serves as its memory.

---

**HOW TO COMPLETE IT**

- Chronologically and daily

- Clearly and exhaustively (dates, procedures, references of the products and reagents used, results and observations, interpretations and comments, new ideas and hypotheses, etc.) so that a third party can reproduce the experiments.

- With non-erasable ink

- Regularly signed and countersigned

---

The information contained in the lab notebook is confidential and the property of the University or the Higher Education Institution.
Electronic versions exist

- To improve the management and traceability of data
- To simplify the search for information
- To optimize reporting
- To facilitate teamwork and collaborations
- To better take into account the needs and constraints of certain disciplines such as the Humanities and Social Sciences, Information and Communication Technologies, etc.

But they are often difficult to implement and have high purchase costs. The LIEU Network is considering this other version of the laboratory notebook.

How to get it

This document is an essential preliminary to any procedure related to the protection of research results.

The purpose of this document is to collect the information required to understand the results of scientific research and to evaluate these results for protection and commercial potential. To this end, it contains a technical section and a section concerned with the economic opportunities afforded by the results. These aspects in combination will enable a decision to be made as to the best method of exploitation.

Any university is faced with choices when it intends to disseminate and exploit the results of its scientific research. Should they publish the results, keep them secret or exploit them by means of a spin-off, collaborative research with industry. Should they protect them by means of a patent, a drawing and model, or a brand?

It is important to realize that the entire exploitation process can prove costly. In order to maximize the return on the effort, time and money expended by knowledge transfer officers and researchers, it is appropriate to clarify a few points:

1. Usable results are a set of new results that can be exploited industrially or commercially, it is therefore inadvisable to begin a complete process of exploitation when the commercial potential is limited (for example, more advantageous alternatives are already on the market; the market is too restricted or immature, etc).

2. An invention does not necessarily form the subject of a patent application. It is important to bear in mind that other methods of exploitation can be taken up, depending on the context. The non-technical section of the invention disclosure therefore proves its worth here, since it makes it possible to specify the general context and evaluate the opportunity to select one method of exploitation over another.

3. The exploitation procedure is a long-term partnership between researchers and the Knowledge Transfer Office (KTO). As such, both parties need to assess the importance of investing time and effort in the process.

4. Any researcher wishing to give an industrial dimension to his research will need to show prudence in reporting his results and in making use of the tools provided material transfer agreement (MTA), confidentiality agreements, etc.

The role of knowledge transfer officers is to support the researcher in the exploitation process. Thus, we remain at your service for any assistance you think it might be useful to obtain.

DISTRIBUTION: Please submit the completed disclosure form by e-mail or via postal mail to your KTO.

### I. General information

#### Why/How?:

- **HIGHER PROFIT MARGIN.** Their product or process is easier and cheaper to make than currently available products or processes, but can be sold at a comparable price.

#### 1.g. specify the positioning of your invention on the market

- **LASTING MARKET.** The need or demand for the product will last for a very long time.

- **LARGE MARKET.** There is already a large market for this product or process, or the appeal of the product or process can be expected to create a large market where none previously existed.

- **HARD TO DUPLICATE.** Competitors will have difficulty producing an equivalent product or process, or in solving problems without it.

#### 2. Type of invention

- new compound, molecule
- new production process
- new product
- new use for a known product / process
- new device
- new method
- new service
- other, please explain:

#### 3. Oral and/or written public disclosures made by inventors

By checking the appropriate box, please indicate whether this invention, in full or in part, has been subject to a disclosure:  

<table>

3 Non-Disclosure Agreement. Please supply a copy of the non-disclosure agreement.

- A sequence (DNA, protein, etc.) has been placed on a database or biological material (plasmid, microorganism, ...) has been deposited in a collection?

If Yes please mention the database or the collection:..................
4. Funding. If you have benefited from funding, even if only in part, at any stage of the research, please state the source by filling in the appropriate boxes below. If the funding contract includes conditions relating to ownership of results of the research, please enclose the contract as appendix, together with a copy of the scientific program.

<table>
<thead>
<tr>
<th>Type</th>
<th>Name/acronym</th>
<th>Duration</th>
<th>Nature of the contract</th>
<th>Industrial sponsor/patron</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

1 Type: European, Regional (Walloon Region, etc.), National (FNRS, etc.), Internal funding, Other

5. Contractual background:

- Does the invention incorporate any material supplied by a third party? [ ] Yes [ ] No
- Does the invention incorporate any confidential results supplied by a third party? [ ] Yes [ ] No

If yes, please supply a copy of the MTA (material transfer agreement) or CDA (confidential disclosure agreement)

6. Laboratory notebooks:

- Is the invention described in / supported by laboratory notebooks? [ ] Yes [ ] No
- If so, are those notebooks available on request? [ ] Yes [ ] No
NOTICE:
This page is to be completed following the procedures put in place by the various universities and universities of applied sciences. Please contact your KTO for further information.

1. Bibliographical search

Are there other research or industrial teams who work in the field of the invention? ☐ Yes ☐ No

If yes, please list and attach copies of any publications (oral or written) most closely related to the invention:

1. 
2. 
3. 

What were the keywords used to perform the search?

<table>
<thead>
<tr>
<th>A. Concepts</th>
<th>B. Keywords/synonyms</th>
</tr>
</thead>
<tbody>
<tr>
<td>Concept 1:</td>
<td></td>
</tr>
<tr>
<td>Concept 2:</td>
<td></td>
</tr>
<tr>
<td>Concept 3:</td>
<td></td>
</tr>
<tr>
<td>Concept 4:</td>
<td></td>
</tr>
<tr>
<td>Concept 5:</td>
<td></td>
</tr>
<tr>
<td>Exclusion concept:</td>
<td></td>
</tr>
</tbody>
</table>

2. Patent search

➢ Was a first search carried out by PICARRE in collaboration with the researchers

☐ Yes date:.................... ☐ No

If yes, please enclose the search strategy in an appendix, together with an analysis of previous work that is relevant in terms of its difference in relation to this invention and the drawn conclusions.

If not, has a search been carried out based on patents databases? ☐ Yes ☐ No

If yes, complete the following table:

<table>
<thead>
<tr>
<th>ID</th>
<th>Keywords or classification code</th>
<th>Search tool</th>
<th>Search field</th>
<th>Number of documents</th>
<th>Number of relevant documents</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>to fill in</td>
<td>to fill in</td>
<td>to fill in</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>to fill in</td>
<td>to fill in</td>
<td>to fill in</td>
<td></td>

</tr>
<tr>
<td>3</td>
<td>to fill in</td>
<td>to fill in</td>
<td>to fill in</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>to fill in</td>
<td>to fill in</td>
<td>to fill in</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

➢ Select the most relevant document(s) (1-3 docs) and explain in a few words the technical differences with your invention.

The most relevant document is generally the one that corresponds to a similar use and requires the minimum of structural and functional modifications to come to the invention.
### III. Go to Market

#### 3.a. Technology Readiness Level (TRL).
Select the most suitable TRL for the technology (TRLs may be not perfectly adapted to your specific technology, select what seems closest)

<table>
<thead>
<tr>
<th>IDEA</th>
<th>TRL 0: Idea</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Unproven idea/proposal. Paper concept. No analysis or testing has been performed.</td>
</tr>
<tr>
<td>TRL 1:</td>
<td>Research and Development begins</td>
</tr>
<tr>
<td></td>
<td>Basic functionality/principles demonstrated by analysis. Shall show that the idea is technologically conceivable.</td>
</tr>
<tr>
<td>TRL 2:</td>
<td>Basic principles confirmed</td>
</tr>
<tr>
<td></td>
<td>Analytic studies, small scale testing in laboratory environment. Shall show that the technology can is likely to meet specified objectives with additional development. Practical applications can be invented. Applications are speculative and there may be no proof or detailed analysis to support the assumptions.</td>
</tr>
<tr>
<td>TRL 3:</td>
<td>Validation at lab scale</td>
</tr>
<tr>
<td></td>
<td>Analytical studies and/or laboratory studies deliver results that validate predictions/objectives. If relevant, validation of separate elements of the technology. (Examples may include components that may not yet be integrated or representative)</td>
</tr>
<tr>
<td>TRL 4:</td>
<td>Prototype(s) available, first tests</td>
</tr>
<tr>

Confidential - January 2016
III. Go to Market

3.b. RESOURCES: what are the key resources that are required to continue the development of your invention: people (yourself, lab team,…), lab involvement (team, identified research program,…), funding, need for external partner? Please indicate whether these resources are -and will remain- available.

3.c. ACTIVITIES: What are the key activities (lab analysis, prototyping, scaling-up, methods, know-how…) that are required to continue the development of your invention?

3.d. COMPETITORS: Why are the benefits significantly better than the competition? What are the alternatives?

3.e To whom (users, customers, industry) is this invention dedicated? List the names of companies you think might be interested in using your technology to make, use or sell products or services. Please specify with examples (company names, press articles…) + Applications?
If you have a contact at any of these companies, be sure to provide name, position, e-mail and telephone. (We will obtain your permission before contacting anyone).

<table>

**SIGNATURES**

**WARNING:** inventorship is a matter of law and the below list should include the name of all persons who may qualify as legal inventor. An incomplete list of inventors, or a list that includes persons who have not in fact contributed to the inventive work, may therefore result in the lapse or invalidity of a patent.

**Inventors (to be signed before witnesses)**

I have acquainted myself with the University's rules, which I accept.

My signature at the foot of this document confirms my agreement to the Research Department's administrative procedure for an invention disclosure. I agree to co-operate fully with the KTO by supplying any document or information required for the registration, upkeep and possible defense of patents, negotiations of license contracts and the exploitation of the results of my research. I undertake to sign any document required for the registration or issue of patent applications, also an inventor's agreement, whose purpose is to settle the method of distributing income earned by exploiting the invention. I **undertake not to disclose the invention either orally or in writing during the priority period of the patent application without notifying the KTO.**

## Annex 1 -- Software TRL Scale developed with the LIEU Network

<table>
<thead>
<tr>
<th>TRL</th>
<th>Description</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Idea</td>
<td>Basic research begins to be translated into applied research and development. Examples may include a concept that can be implemented in software or analytic studies of an algorithm’s basic properties.</td>
</tr>
<tr>
<td>2</td>
<td>Invention</td>
<td>Once basic principles are observed, practical applications can be postulated. The application is speculative and there is no proof or detailed analysis to support the assumptions.</td>
</tr>
<tr>
<td>3</td>
<td>Feasibility</td>
<td>Active research and development is initiated. This included analytical studies to produce code that validates analytical predictions of separate software elements of the technology. Examples include software components that are not yet integrated or representative but satisfy an operational need. Algorithms run on a surrogate processor in a laboratory environment.</td>
</tr>
<tr>
<td>4</td>
<td>Integrated prototype</td>
<td>Basic software components are integrated to establish that they will work together. They are relatively primitive with regard to efficiency and reliability compared to the eventual system. System software architecture development initiated to include interoperability, reliability, maintainability, extensibility, scalability, and security issues. Software integrated with simulated current/legacy elements as appropriate.</td>
</tr>
<tr>
<td>5</td>
<td>Product prototype</td>
<td>Reliability of software ensemble increases significantly. The basic software components are integrated with reasonably realistic supporting elements so that it can be tested in a simulated environment. Examples include “high fidelity” laboratory integration of software components. System software architecture established. Algorithms run on a processor(s) with characteristics expected in the operational environment. Software releases are “Alpha” versions and configuration control is initiated. Verification, Validation, and Accreditation initiated.</td>
</tr>
<tr>
<td>6</td>
<td>Product demonstrator</td>
<td>Representative model or prototype system, which is well beyond that of level 5, is tested in a relevant environment. Represents a major step up in software demonstrated readiness. Examples include testing a prototype in a live/virtual experiment or in a simulated operational environment. Software run on processor of the operational environment are integrated with actual external entities. Software releases are “Beta” versions and configuration controlled. Software support structure is in development. Verification, Validation and Accreditation are in progress.</td>
</tr>
</tbody>
</table>
| 7   | System prototype demonstration | Represents a major step up from Level 6, requiring the demonstration of an actual system prototype in an operational environment. Algorithms run on processor of the operational environment are integrated with
<table>
<thead>
<tr>
<th>TRL 8: Actual system completed and qualified through test and demonstration</th>
<th>Software has been proven to work in its final form and under expected conditions. In most cases, this level represents the end of true system development. Examples include test and evaluation of the software in its intended system to determine it meets design specifications. Software releases are production versions and configuration controlled, in a secured environment. Software deficiencies are rapidly resolved through support infrastructure.</th>
</tr>
</thead>
<tbody>
<tr>
<td>TRL 9: Technology System proven through successful operations</td>
<td>Application of the software in its final form and under usage conditions, such as those encountered in operational test, evaluation and reliability trials. In almost all case, this is the end of the last “bug fixing” aspects of the system development. Examples include using the system under operational conditions. Software releases are production versions and configuration controlled. Frequency and severity of software deficiencies are at a minimum.</td>
</tr>
</tbody>
</table>
TRADEMARKS
for getting noticed and standing out!

WHAT IS A TRADEMARK?

It's a sign that can be represented. There are different types of trademark:

• **Word trademark**: one or more words, name of a product or service, brand's company name
• **Figurative trademark**: a logo
• **Semi-figurative trademark**: a word and a logo
• **Shape trademark**: shape or packaging of a product (3D)
• **Slogan**
• **Colour(s)**
• **Olfactory trademark**: an odour
• **Sound trademark**: sound, musical notes

WHEN?

- Spin-off being created
- **Project, laboratory or platform** that could lead to commercialization
- **Product or service** to be marketed
- **Software**
- Etc.

WHY?

A trademark makes it possible for you to:

• Distinguish your products and services from those of your **competitors**
• Become **well-known**
• Establish and protect your **reputation**
• Convey your **values**
• Create an **asset** of commercial value

First to file - first served!
The first to protect a trademark on a given territory and within a market may object to its competitors using the same sign or a similar sign.
TRADEMARKS
for getting noticed and standing out! 2/2

WHAT REQUIREMENTS ARE THERE?

• **Distinctiveness**
The sign must be neither descriptive nor generic

• **Legality**
The sign must not contain deceptive elements that may mislead the consumer, or be contrary to morality or public order

• **Availability**
The sign, must not already have been acquired as a trademark or have been earlier appropriated by a third party as its company name, trade name, domain name, etc.

HOW TO FILE A TRADEMARK

In order to make the most of your rights, consider:

• Contacting your KTO
• Checking the availability of the trademark in specific databases
• Choosing the sign or name to be registered
• Thinking about the marketing strategy
• Precisely choosing the products or services from a specific list: classification
• Choosing the route for registering: national, European, international

ALSO...

The trademark may be cancelled for lack of use:
It is subject to a duty of use within five years.

A sign can become generic:
a brand can be a victim of its own success and become a common name.
e.g.: Aspirin, Thermos, Escalator, Trampoline, Linoleum, etc.

HOW MUCH DOES IT COST?

• **In Benelux**
Around €240 for 10 years for three classes and €37 per additional class.

• **For the European Union**
Around €850 for 10 years in one class, €50 for the second class, plus €150 per additional class from the third class onward.

• **Internationally**
[www.wipo.int/madrid/fr/fees/calculator.jsp](http://www.wipo.int/madrid/fr/fees/calculator.jsp)
is a tool that can provide a quote.

Please note that these costs do not take account of trademark attorneys or lawyers' fees.

COMMERCIAL SECRECY

When search results may not be protected by a patent or another intellectual property right

A pretty broad concept that affects all researchers throughout their careers because it can encompass all knowledge and information, of any type whatsoever, held by a natural or legal person.

Examples
• trade secret
• formulation
• recipe
• chemical compound

WHAT ARE THE CONDITIONS FOR PROTECTING COMMERCIAL SECRECY?

The European legislator requires*:

• **“secret” character**: information is secretive when, in its entirety or in the exact configuration and assembly of its elements, it is not generally known to the persons forming part of the circles who normally deal with this kind of information or it is not easily accessible to them;

• **commercial value**, because of its secret nature;

• **measures taken by the person who has control of the information in order to keep the information secret.**

* Directive (EU) 2016/943 of the European Parliament and of the Council of 8 June 2016 on the protection of undisclosed know-how and business information (trade secrets) against their unlawful acquisition, use and disclosure (not yet transposed into Belgian law at the time of writing this memo)

© Céline Lefèbvre / UCL

Your know-how is valuable!
COMMERCIAL SECRECY
When search results may not be protected by a patent or another intellectual property right

WHY RESORT TO COMMERCIAL SECRECY?

To offer protection, without any specific registration formality or renewal with an administration, and without time limit, based on results of research or expertise that have a potential for the institution but:

- cannot be protected by an intellectual property right
- must be kept secret for strategic reasons

→ In all instances, contact your KTO to define the most suitable protection strategy.

TO REFLECT ON

The Coca-Cola Strategy
the Coca-Cola formula is the most famous example of a business secret. Now written and stored in a safe, it is – according to legend – only known to two people in the world, who are not allowed to travel together.

The Michelin strategy:
An example of the difficulty in finding a balance between protection by commercial secret or by patent is the one of Michelin. Until recently, the group filed very few patents, for fear of disclosing its technologies to competitors. Until it became a victim of espionage...
This demonstrates that the policy of an institution regarding commercial secret can evolve over time.

More info

A FEW THOUGHTS

- via the procedure specific to your institution, establish with your KTO a strategy to ensure that the secret character can be maintained in the medium and long term,
- do not reveal confidential information which are secret in your personal circle or in a professional framework (meeting, conference, poster, publication...),
- establish a system of information security,
- lock physical access to offices and labs,
- secure IT access,
- etc.

The breeder’s right is only granted where the variety is:

- New
- Distinctness
- Uniform
- Stable
- Suitable denomination

TO WHOM DO THE RIGHTS BELONG?

Before taking any steps to protect a new plant variety or to grant any rights to this plant variety to third parties (which could otherwise be detrimental to its protection), check with your KTO by whom and in what context the variety has been developed:

- by you in the exercise of your duties and/or your research at your institution and/or with the means made available by the latter:
  - the rights probably belong to your institution.
- by two or more persons:
  - the right is jointly owned by these people or their beneficiaries or their respective successors, unless otherwise agreed.
- by different people, independent from each other
  - the rights are granted to the first person who applies for protection by making a filing in accordance with the legal requirements.
- by a person who is not entitled
  - the rights can be claimed through a legal proceeding.
**Why should you protect the vegetal variety that you have developed?**

- To avoid others using your protected plant variety without permission.
  - for example, the holder of the certificate (called the "breeder") might prohibit reproduction or multiplication, offer for sale, marketing, import and export of the plant variety that he has developed, without his consent.
- to write off the investment that you have made for the development of the new plant variety.
  - the user might grant licenses to third parties (mainly to companies) in order for them to be legally able to commercially exploit the plant variety against a commercial fee to be negotiated.

**How can you protect this new plant variety?**

If the new plant variety rights belong to your institution, the KTO will provide you with support (technical, commercial or legal) for the negotiation of such license agreement and will proceed with the necessary administrative procedures.

**Who bears the costs?**

Your institution will bear all (or most) costs associated with the filing and the administrative requirements prescribed by law:
- if the new plant variety rights belong to it
- if it takes a positive decision to protect it
  - Contact your KTO who will ensure that appropriate steps are taken at the Office of Intellectual Property.

**How long does legal protection last?**

- **Belgian protection:**
  - 30 years for trees, vines and potatoes
  - 25 years for other plant species
- **Community protection** (for all other member countries of the European Union either together or on a per country basis):
  - 30 years for trees and vines
  - 25 years for other plant species

These time limits start to run as soon as the breeder’s right has been granted.

**How much does it cost?**

The filing and procedure fees varies depending on the class to which the variety belongs.

**Fees grids**
- **In Belgium**
- **At Community level**

**Useful links**

- Verification of the novelty of the plant variety
- General information for the breeder

To ensure creations are effectively protected
To stand out from the competition
To increase the economic value (registration results in value added)
To have a future development tool
To increase awareness

Why file?

What is a design or model?
The design (2D) or model (3D) is a piece of intellectual property that protects the new aspect of an object.

The appearance of a product or a part of a product can be considered as a design or model.
The appearance of a product is conferred on it, in particular, by the characteristics of the lines, outlines, colours, shape, texture or materials of the product itself or its decoration.

What are the conditions?
To be valid, a design or model must meet several conditions:

→ Novelty
The requirement is not to publish the model in a catalogue, in a newspaper article or on the internet, and that this model is not exhibited at a fair or any other public place before the filing, otherwise the model falls into the public domain.

BE CAREFUL!
The publication of a model on the internet means that the model has been disclosed worldwide.

→ Individual character
The informed user must not have the feeling of “déjà vu”.

→ It must not be contrary to public order or good morals

The appearance of a product or its aesthetic appearance can be protected! Think about it!
Above all, check novelty in the databases of the offices mentioned below with the help of your KTO

Then register/file the design or model with:

- **The Benelux Office of Intellectual Property (BOIP)**
  For protection in Benelux (Benelux drawing or model)

- **EUIPO**
  For protection in all Member States of the EU (Community design or model)

- **WIPO**
  For international filing aimed at specific countries of interest to be designated among the list of countries having acceded to the system (so-called “The Hague System”)

- **National Office**
  For national filing, in countries that are not members of the international model system, for protection that is limited territorially to this specific territory (a search must be carried out based on the country of interest)

### What is the procedure?

- At any time (if the drawings and models have not yet been disclosed)
- Soon after the creation of the design or model
  - Contact your KTO as soon as possible!

### For how long?

In the majority of cases:
- 5 years from the date of the filing, renewable 4 times successively up to a maximum of 25 years.
- A design or model that is the subject of filing cannot be changed during the registration period nor on the occasion of its renewal.

### When to file?

- At any time (if the drawings and models have not yet been disclosed)
- Soon after the creation of the design or model
  - Contact your KTO as soon as possible!

### One notable exception

Unregistered Community designs are protected anyway in the European Union against any identical reproduction, without any requirement of filing, for 3 years from the date upon which they were first available to the public within the territory of the European Union.

However, the difference with filed models is that the proof required to establish a copy is much more restrictive and difficult to provide.

What are the conditions for copyright protection?

- **Originality**
  
The original work must reflect the author's personality and be the fruit of the author's intellectual effort.

- **Format**
  
The original work must be materialised, wathether the medium.
  
The following in particular are covered by copyright: books, scientific papers, correspondence, software, databases, graphs, drawings, plans, photographs, paintings, sculptures, etc.
  
Copyright protection is acquired automatically when the original work is generated and does not depend on the completion of any specific formalities.

It continues to apply for 70 years after the author's death, after which period it falls into the public domain.

Who is the author, the owner of the copyright?

The original owner of the copyright is the physical person who created the work.

He or she may assign his or her copyright (economic rights) or grant a licence to any third party (an editor for example) wishing to exploit the work.

The law provides for cases where transfer to a third party is presumed. So for software, the employer is presumed, unless there is evidence to the contrary, to be the owner of the copyright on software created by its employees in the course of their duties.
The law does however provide for certain exceptions where use of a work without the author’s agreement is permitted. Two of these apply more particularly to scientific publications.

- **The exception regarding quotation** allows copying of a short extract of a work for the purposes of review, teaching or scientific work provided that the source and author’s name are acknowledged.

- **The exception regarding use for the purposes of teaching and research** allows copying of all or part of a work, for the purposes of illustration for teaching or research, provided that there is no commercial purpose, no conflict with normal exploitation of the work by the author and provided that the source and author’s name are acknowledged.

Copyright covers the FORM in which an idea is expressed (a text or a drawing for example), but not the IDEA itself!

### Exceptions

The law does however provide for certain exceptions where use of a work without the author’s agreement is permitted. Two of these apply more particularly to scientific publications.

- **Moral rights**
  
  Right of disclosure, right to claim authorship, right of integrity.
  
  They are intended to protect the integrity of the work and the author’s reputation. Being closely linked to the author’s personality, they are inalienable rights and cannot be assigned to a third party.

- **Economic rights**
  
  Right of reproduction and communication to the public, right of adaptation and translation, etc.
  
  They allow dissemination and economic exploitation of the work. These are exclusive rights of the copyright owner.
  
  This means that the third parties are prohibited from using the work without the copyright owner’s approval through a licence or assignment.

PATENT

What happens when a patent application is filed?

Illustration of a typical procedure. Variations may be considered by your KTO.

Filing of an International Patent Application (PCT)

Receipt of the search report

Filing a first patent application

Receipt of the international search report (ISR)

Illustration of a typical procedure. Variations may be considered by your KTO.

Publication of the patent applications

National/regional entry phases (final choice of the territories to be protected)

Examination in different countries/regions

Issuing of patent

Patent expiry

Click on each button for more information
A transfer or collaboration opportunity is a form, usually written in English, containing:

- A brief description of the research results
- The benefits and advantages of the results compared to existing solutions
- The targeted areas of application
- The intellectual property status
- The state of maturation of the results ([TRL scale](#))
- The type of partnership sought
- The keywords
- The laboratory/institution's references
- The KTO's contact details

### SPECIFICALLY

### ADD VALUE

Bringing value by transferring, selling or pursuing research through new academic and/or industrial collaboration.

### TRL SCALE

**(TECHNOLOGY READINESS LEVEL)**

The TRL scale defines nine levels of maturity for a technology, from the idea to the market.

It provides a common frame of reference for defining the state of maturity of a project and specifies the technical developments accomplished at each level.

### TYPES OF PARTNERSHIP

Licensing, transfer, academic collaboration, industrial collaboration, knowledge transfer, etc.

### WHY?

- To promote and/or transfer research results, whether protected or not, from Universities and Higher Education Institutions to various partners and potential users.
- To enable the Society (companies, associations, research centres, etc.) to benefit from the advances in research.

GOOD IDEA! IT MAY ALSO ENCOURAGE A COMPANY OR ANOTHER PARTNER TO COLLABORATE WITH MY LAB TO MOVE FORWARD WITH THE LAST NECESSARY DEVELOPMENTS!

MY RESEARCH IS VERY ADVANCED BUT NOT COMPLETE ENOUGH TO OFFER IT TO A COMPANY. FILING A PATENT AND WRITING A TRANSFER OPPORTUNITY ARE NOT POSSIBLE. WHAT SHOULD I DO?

WHAT IF YOU WERE TO ISSUE A COLLABORATION OPPORTUNITY? IT WOULD ALREADY SHOW OFF THE RESULTS OF YOUR RESEARCH.

WHAT SHOULD I DO?

WHAT IF YOU WERE TO ISSUE A COLLABORATION OPPORTUNITY?
IT WOULD ALREADY SHOW OFF THE RESULTS OF YOUR RESEARCH.

FILING A PATENT AND WRITING A TRANSFER OPPORTUNITY ARE NOT POSSIBLE.

MY RESEARCH IS VERY ADVANCED BUT NOT COMPLETE ENOUGH TO OFFER IT TO A COMPANY. FILING A PATENT AND WRITING A TRANSFER OPPORTUNITY ARE NOT POSSIBLE. WHAT SHOULD I DO?

WHAT IF YOU WERE TO ISSUE A COLLABORATION OPPORTUNITY? IT WOULD ALREADY SHOW OFF THE RESULTS OF YOUR RESEARCH.

FILING A PATENT AND WRITING A TRANSFER OPPORTUNITY ARE NOT POSSIBLE.
The researcher writes up the transfer opportunity or the collaboration opportunity together with his/her KTO, for the following recipients:

- Commercial and non-commercial companies
- Research centres
- Associative sector
- End-users
- Business operators

The timing of the writing and publication of the transfer opportunity or the collaboration opportunity can thus vary and is defined in consultation with the KTO.

The researcher always after identifying results to which value can be added.

According to the strategy for protecting intellectual property.

When?

- Always after identifying results to which value can be added.
- According to the strategy for protecting intellectual property.

WHO WRITES IT UP AND FOR WHOM?

GOOD IDEA! IT MAY ALSO ENCOURAGE A COMPANY OR ANOTHER PARTNER TO COLLABORATE WITH MY LAB TO MOVE FORWARD WITH THE LAST NECESSARY DEVELOPMENTS!

MY RESEARCH IS VERY ADVANCED BUT NOT COMPLETE ENOUGH TO OFFER IT TO A COMPANY.

The Business Model Canvas - often referred by the acronym BMC - is a visual representation that facilitates iterative development (or adaptation) of new (or existing) business models. It is composed of nine blocks which helps an entrepreneur to build a value-added proposal to customers and understand the financial in- and outflows involved in his/her business.

**WHAT?**

The BMC is designed for building business models through brainstorming sessions.

It provides a holistic view of the business as a whole and gives people a shared language, leading to better strategic conversations and better ideas on the table.

**WHY?**

In 2004, Alexander Osterwalder completed a Ph.D. thesis on business models with Prof. Yves Pigneur (HEC Lausanne, Switzerland).

The Business Model Canvas was born!

Two years later the approach outlined in his thesis began to be implemented around the world.

Describe, design, challenge, invent and pivot your business model!
VALUE PROPOSITION
What need/problem does your project address? What is your added value? What are the strong points compared to the competition?

KEY PARTNERS
Do you need external providers to promote your product/service, to complete your service offer etc.?

KEY ACTIVITIES
Which activities are essential to allow your economic model to work (production, supply chain, software development, network, platform, problems solving etc.)?

KEY RESOURCES
What resources are essential to the functioning of your business: premises, equipment, machinery, financial resources, human resources, software, brands etc?

COST STRUCTURE
What are the different types of costs related to the business model (cost logic, value logic, fixed costs, variable costs, economies of scale etc.)?

CUSTOMER SEGMENTS
For each product and/or service, what groups of individuals or organizations do you want to reach? Are you targeting mass markets, niche markets, segmented markets or others?

CUSTOMER RELATIONSHIPS
What are the types of relationships established with each customer segment based on strategic objectives: to acquire, retain, upsell (personal assistance, self-service, automated services, communities, co-creation)?

CHANNELS
- How will you promote/sell your product and/or service?
- How will your customers assess your product and/or service?
- What after-sales service will you provide?

REVENUE STREAMS
What kind of income will be generated from each customer segment (from sale, subscription, rental/loan, licencing, brokerage, advertising etc.)?
A social enterprise is a business
- the main objective of which is to **have a social impact** rather than generating profit for its owners or partners,
- which predominantly **uses its surplus** for these social objectives,
- which is **managed** by a social entrepreneur **in a responsible, transparent and innovative manner**, including combining employees, clients and stakeholders affected by its activities.

**WHAT IS A SOCIAL ENTERPRISE?**

**WHY CHOOSE A SOCIAL BUSINESS MODEL CANVAS?**

Submitting to this allows the social entrepreneur:
- to anticipate the social impact of its activities,
- to measure its financial viability,
- to best predict the challenges he will face.

**IN PRACTICAL TERMS**

The SOCIAL business model canvas allows the:
- understanding, design, articulation and discussion of the heart of the concept;
- testing and development of prototypes to see if it is possible to passionately believe the impact of the project and its economic viability.

The **SOCIAL Business Model Canvas**
takes into account the special characteristics of social enterprises!
**WHAT IS THE DIFFERENCE WITH THE INITIAL TOOL?**

Marketing outside the classical mechanisms of the market implies thinking more broadly about the blocks of the Business Model Canvas. For example:

---

### VALUE PROPOSITION

The value proposition must go beyond the simple offer of a product or service. More broadly, it must consider the improvements generated by the activity (environmental, social cohesion, etc.).

---

### KEY PARTNERS

In the same vein, the target of beneficiaries must often be extended to those who will benefit from the created impact (consumers but also users, citizens, public authorities, suppliers, etc.).

---

### KEY RESOURCES

The key resources that will enable the company to function and achieve its goals also need to be widely understood (partnerships, collaborations, volunteering, subsidies, etc.).

---

### SURPLUS

One special characteristic of the SOCIAL business model canvas is to add a block involving a definition of the management of surplus generated by the activity (captured value).

It is then necessary to consider set-aside, distribution of dividends, drawback or repayments, investment in another project, etc.

---
