EXECUTIVE SUMMARY

Over recent years, the influence of EC law on the Members States’ direct tax systems has drawn growing attention from European institutions, national governments, tax specialists and the media. The focus of this attention has been less on the adoption of European legislation in this area, than on the development of the case-law of the European Court of Justice in direct tax matters.

Unlike for indirect taxes, as VAT and excise duties, which have been significantly harmonized by Community legislation, the EC Treaty does not contain explicit rules for the adoption of secondary legislation aimed at approximating the national income tax systems of the Member States. As to corporate taxation, the existing direct tax directives, adopted on the basis of Article 94 EC, are scarce and deal with specific cross border tax obstacles to intra-Community operations, such as corporate reorganizations or intra-group dividends, interests and royalties.

However, differences between the national direct tax systems may distort the allocation of resources and may generate double taxation, which hinders the achievement of the Internal market, an objective affirmed in Article 14 EC. This objective has certainly a political dimension, but is also reflected in Treaty provisions conferring on taxpayers certain rights which are directly applicable and enforceable by Community and national courts.

Also in unharmonized areas, like direct taxation, Member States are bound to respect their general commitment to Community loyalty under Article 10 EC. According to the Court, “although direct taxation falls within their competence, the Member States must none the less exercise that competence consistently with Community law”\(^1\). In particular, national direct tax provisions (including international tax conventions) must not compromise the freedoms enshrined in the EC Treaty.

Since the 1986 Avoir fiscal case (C-270/83), the Court has repeatedly reaffirmed this principle. The number of decided cases is growing each year, together with the areas within direct taxation that have been subject to Court scrutiny. EC law has by now not only affected Member States’ personal and corporate income taxes, but also wealth and property taxes, inheritance and gift taxes and taxes on commercial activities, whether adopted at national, regional or local level.

As to personal income tax, the Court’s case-law has been particularly able to highlight discriminations experienced by EU workers, both employed and self-employed, who had chosen to carry their economic activity in other Member States. The Court has accepted that Member States can apply different tax rules or tax systems to resident and non-resident natural persons, since these two categories of persons are generally not comparable\(^2\).

---

2 According to the Court “there are objective differences between them, both from the point of view of the source of the income and from the point of view of their ability to pay tax or the possibility of taking account of their personal and family circumstances” (ECJ, 14 February 1995, Case C-279/93, Finanzamt Köln-Altstadt v Schumacker, ECR I-225, paras. 31-34; Wielockx, para. 18; ECJ 27 June 1996, Case C-107/94 Asscher, ECR I-3089 para. 41). In Asscher, however, the ECJ ruled that Member States could not apply a higher tax rate to non-residents without proper justification (Asscher, para. 49; see also ECJ, 12 June 2003, Case C-55/98, Gerritse v Finanzamt Neukölln-Nord, ECR I-5933, para. 54).
However, depending on the circumstances of the case, the Court has considered that a specific tax burden imposed only on non-residents, or the denial by a Member States to non-residents of a tax advantage available to residents, can constitute a discrimination if “there is no objective difference between the situations of the two such as to justify different treatment in that regard”.

According to the principle laid down in the famous Schumacker case, a non-resident taxpayer is deemed to be in the same situation of a resident if he derives his income entirely or almost exclusively from the economic activity which he performs in that State.

The Court of Justice has developed a case-law on personal income tax which, starting from the application of the economic freedoms, has progressively widened its scope to a much broader recognition of European citizenship in tax matters, based on Article 12 and on Article 18 EC, introduced by the Maastricht Treaty. As a consequence, many other direct tax obstacles have been removed as a result of the Court’s judgements, among others as regards pension contributions and benefits, immovable property, or cross-borders services whether provided to or received from other Member States.

As to corporate income tax, landmark judgements on the freedom of establishment and on the equal treatment of branches and subsidiaries, on the cross-border compensation of losses, on the taxation of cross-borders services can be seen as significant steps towards the achievement of the Internal market.

Restrictions to the freedom of establishment can be created by tax measures adopted by the Member State where a company has its primary establishment (the Home State) that hinder the establishment of subsidiaries or branches in another Member State or by national tax measures of the State of the secondary establishment of a non-resident company (the Host State). For example, EU law thus prohibits Member States to treat branches and subsidiaries of non-resident EU companies less favourably than resident companies as to the tax rate, the right to interest on overpaid tax or to a tax deduction of research expenses carried out in other Member States.

In particular, important obstacles to the achievement of the Internal market are the difficulties to take into account losses incurred by multinational companies. When places of business are located in different countries, difficulties arise when neither the State of residence nor the State of activity admits the deduction of losses. This can be seen as a consequence of the lack of cross-border compensation of losses through a consolidation mechanism at the EU-level. Similarly, tax restrictions exist as to transfers of assets and services between associated companies established in different Member States.

At the junction of corporate and personal taxation, numerous cases have addressed the taxation of individual and corporate shareholders in one Member State of companies established in other Member States. The issues concerning the taxation of company shareholders are mainly – but not only – related to the potential (and often actual) risk of economic double taxation of distributed income. National tax measures can dissuade residents from investing in other Member States in many different ways. They can restrict incentives to the acquisition of shares to participations in resident companies. They can subject dividends received from non-resident companies (inbound dividends) or distributed to non-resident shareholders (outbound dividends) to a less favourable treatment than domestic dividends; they can overtax capital gains realized on the alienation of foreign shares. As to corporate shareholders in particular, the Court of Justice also applied the Treaty freedoms to national rules limiting the deduction of participations costs in foreign subsidiaries and to anti-abuse measures specifically targeted at multi-national groups.
The Court has nevertheless admitted that not all restrictions to intra-Community trade and movement were incompatible with EC law: In the absence of harmonizing measures, Member States keep to a certain extent the right to allocate their taxing jurisdictions among them through double taxation conventions, the right to fight tax avoidance and tax evasion, as well as the right to prevent that taxpayers engaging in cross-border activities end up in a more favourable situation than “domestic” taxpayers by benefiting from multiple tax advantages granted by different jurisdictions. In particular, EU law does not preclude – yet – Member States to apply non-discriminatory rules that may lead to situations of double taxation or to apply anti-abuse rules targeted at economic operators having cross-border activities, provided that they do not increase their tax burden as compared to a person operating in a purely national context or that they are aimed specifically at combating purely artificial arrangements entered into for tax reasons alone.

As to the implementation of the Court’s case-law into national legislation, Member States have to comply with judgements. However, the effectiveness of the implementation by the Member States of the EC freedoms, as interpreted by the Court of Justice, is difficult to assess. Substantial differences exist between Member States as to the number of cases referred to the Court, as well as to the manner in which they adapt (or not) their tax systems to the requirements of EC law subsequent to ECJ judgements. However, there is no direct link between the number of cases referred to the ECJ and the legislative changes made by Member States to adapt their direct tax system to the EU requirements. Considering these differences, the term of negative harmonization, often used to describe the role presently played by the European Court of Justice in the area of direct taxation, may appear excessive.

In any case, the Court’s case law in direct tax matters, especially on the EC freedoms, has potentially a rather large and at least originally not expected impact on the exercise by Member States of their taxing powers. If taxation on the basis of residence by Member States is not fundamentally jeopardized by this case-law, non-residents benefit under EU law from legal protection against discriminatory measures that are applied to them by the Member State where their income is sourced. However, uncertainties continue to exist as to the exact tax status of non-resident taxpayers. Member States’ tax policy choices in the areas of tax incentives, of anti-abuse rules and of the exercise of taxing powers by regional and decentralized bodies are or could also be strongly influenced by the development of the Court’s case-law.

In the international context, EC freedoms as interpreted by the Court affect the existing double taxation conventions (DTCs) signed between Member States, and even between Member States and third countries. If, according to the Court, “Member States are at liberty, in the framework of [double taxation conventions], to determine the connecting factors for the purposes of allocating powers of taxation...”\(^3\), they are nevertheless bound by the superior EC Treaty obligations. A DTC as such is no justification for restricting the EC Treaty freedoms. DTCs can be taken into consideration in order to assess the overall situation of the taxpayer and its compatibility to the EC freedoms. A restriction in one Member State of a freedom may be admitted if its effects are neutralized by a DTC which produces compensating effects in the Member State other than the one of residence. However, the Court has been reluctant to decide that EC law requires extending the benefits, granted by a given Member State in a DTC to residents of another Member State, to all EU residents (most favoured nation clause).

---

Neither can be derived from the case-law so far that juridical double taxation must be considered as a breach of the EC freedoms per se. Double taxation, whether juridical or economical (see Annex 1, Glossary, “Double taxation”), hinders the establishment of the Internal market. Sometimes, double taxation results from the application of national rules that provide for an unjustified different tax treatment to domestic and to cross-borders situations: such rules have been declared incompatible with EU law. However, the case-law of the Court has in some circumstances resulted in accepting national rules by which cross border transactions are taxed more heavily than domestic transactions.

The fact that the EC freedoms primarily rely on the – juridical – concept of discrimination makes it difficult to analyze the Court’s case-law on the basis of economic efficiency, using criteria such as capital import neutrality (in the state of source) and capital export neutrality (in the state of residence). On the one hand, economic efficiency relates to the optimal allocation of factors of production resulting in the highest possible productivity and entails the elimination (or at least the mitigation) of international double taxation. On the other hand, most of the case-law must be read as favouring “capital movement neutrality” from the perspective of non-discrimination principles, from the viewpoints of both the State of residence and the State of source, which may seem logically and economically almost impossible to achieve without full harmonization of the national direct tax systems.

Further progress towards a coordination of the national direct tax systems should nevertheless be made in order to remove remaining obstacles to the achievement of the Internal market. The case-law method has indeed various limitations, among which the fact that it is slow, expensive, often influenced by individual situations and thus not always predictable. Moreover, it is inadequate to remove situations of double taxation, where no issue of discrimination is at stake.

Targeted measures should be taken in order to avoid negative legal and economic consequences of the uncoordinated exercise of Member States’ tax jurisdiction. As to corporate taxation, and in particular for multinational groups of companies, sensitive areas in this respect are the tax burdens imposed on the transfer of residence or of assets between Member States, the treatment of cross-border losses, the application of anti-abuse rules or the taxation of outbound or inbound dividends. The important judgments of the Court as well as the Commission’s recent initiatives on these issues are certainly steps in the right direction.

Finally, the question is raised whether a more comprehensive scheme, such as harmonization of corporate taxation by the introduction of a common consolidated corporate tax base (CCCTB) or any other EC instrument on the elimination of double taxation, would not effectively better serve not only Community objectives, but also Member States’ and taxpayers’ interests.

INTRODUCTION

This study aims at describing the impact of the rulings of the European Court of Justice (the “Court”) on the Members States’ direct tax systems. The study contains materials available until December 31, 2007. The case-law of the Court is characterized by its continuing development, in a changing institutional, political, social and economic context.

The area of taxation, and in particular the area of international taxation, is also an evolving field, in which conflicting or converging interests between States, or between States and taxpayers, play an important role in the shaping of the applicable national rules, which face new realities due to the economic globalization.

The study is divided in four chapters.

In the first chapter, preliminary remarks are made as to the legal context in which the Court decides on its cases. The basic elements of the income tax systems of the Member States are briefly recalled, as well as the EC Treaty provisions and secondary legislation relevant for direct taxation. Finally, the methods of reasoning used by the Court of Justice are outlined, with particular reference to direct taxation.

In the second chapter, the Court’s judgements in the area of direct taxation are analyzed. To facilitate comprehension, the cases have been divided in three main categories, viz. taxation of individuals, taxation of companies and taxation of company shareholders, with emphasis on the last two categories. Within each part, sub-categories have been drawn, which do not always correspond to classical schemes but which are intended to offer a systematic view of the dynamics at stake in the Court’s case-law.

This chapter includes also, for each type of cases an attempt to describe the major trends in the implementation of the Court’s case-law by Member States. Particular attention is given to Member States whose legislations have been directly assessed by Court decisions as to their compatibility with EC law.

The third chapter draws up provisional conclusions on the manner in which the development of the Court’s case-law influences the direct tax systems of the Member States.

In a fourth chapter, the limits of the so-called “negative integration” through the case-law of the Court are discussed and suggestions are also made as to room for further European action, notably the adoption of EC legislative acts in direct tax matters.
I. TAXATION OF COMPANIES AND INDIVIDUALS WITHIN A EUROPEAN CONTEXT: SOME PRELIMINARY REMARKS

A. DIRECT TAXATION IN THE INTERNAL MARKET

1. States raise taxes in order to fund their budget. Taxation is thus directly linked to the exercise of sovereignty. Since the early 20th century, (direct) income taxation has become an important component of the total State revenue4.

2. Income taxation first bears on the income of individuals. It also bears on the income of incorporated entities, the income of which on the one hand may find its substance in dividends distributed by subsidiaries which have paid income tax and on the other hand is eventually distributed to individuals. Taxation of the same economic income at the level of the subsidiary, of the parent and of the individual shareholder gives rise to the problem of “economic double taxation”.

3. States traditionally affirm their jurisdiction to tax on the basis of criteria involving a nexus (link) with the income. This link may exist either with the beneficiary of the income, who is e.g. a resident of the State, or with the income itself, which finds e.g. its source in the State. The result of the interaction between the two types of criteria and of varying definitions of each type is that the same income may be taxed in two or more States, giving rise to the problem of “international double taxation”. As to corporate taxation, the two types of double taxation interact and reinforce one another when the subsidiary, the parent and the individual shareholder are located in different States, each of which may indeed be less prone to solve a problem which concerns a foreign taxpayer.

4. Relief for international double taxation can be granted either by unilateral measures, pursuant to which a State agrees to withdraw its tax claim, or by international double taxation conventions (hereafter DTCs). Two main methods are proposed in order to avoid double taxation: the exemption method and the imputation or tax credit method. According to the OECD Commentary, “under the principle of exemption, the State of Residence R does not tax the income which according to the Convention may be taxed in the State of Source”. With the ordinary “imputation” or “credit” method, “the State of Residence allows, as a deduction from its own tax on the income of its resident, an amount equal to the tax paid in the other State … but the deduction is restricted to the appropriate proportion of its own tax”5. It must be noted that those methods serve not only to relieve juridical double taxation, but also to alleviate or eliminate economic double taxation, be it at a domestic or at an international level.

5. Which of these methods – exemption or imputation – leads to the optimal use of economic factors? According to some economists (see nos. 179-189), the best allocation is reached by imposing worldwide taxation combined with an imputation system. This combination ensures “capital export neutrality”, meaning that wherever the taxpayer invests, he will pay the same amount of tax in his State of residence. In contrast, “capital import neutrality” implies taxation only in the State of source, leading to territoriality that is to say to different tax burdens depending on the source country (see Annex 1, Glossary, “Territorial taxation”). Capital import neutrality allows foreign investors to compete in the State of source on an equal footing with a local investor.

---

4 In 2005, the share of direct taxes collected by EU Member States amounted on average to one third of their total tax revenue (including social contributions). Source: European Commission, Taxation Trends in the European Union, Luxembourg, Office for official publications of the European Communities, 2007.

5 OECD Model Convention (2005), Commentary, 23/13 and 23/57.
From this perspective, capital import or export neutrality is appreciated from the point of view of the State of residence. Most tax systems use a hybrid structure of capital export and capital import neutrality rules. However, a great variety of regimes can be observed, reflecting the diversity of the international tax policies pursued by States.

6. Within the EU, most of the tax treaties concluded by the Member States follow the **OECD Model Convention**. This Model Convention includes first the general provisions as to applicability and general definitions of treaty terms, which are followed by so-called “distributive rules” defined in Articles 6 to 22 of the Model Convention providing for allocation of taxing powers between the Contracting Parties. The Model Convention also contains provisions as to exchange of information and sometimes arbitration procedures.

7. Since income taxation can be regarded as a cost linked to the production of income, it influences economic choices. The obvious result of international double taxation is to discourage cross-border economic activity, hereby directly hindering the achievement of the Internal market (Article 14 EC).

B. EXTENT AND SCOPE OF EC COMPETENCE IN THE AREA OF TAXATION

1. EC Treaty provisions regarding taxation

8. Unlike Member States, the European Community does not exercise its competences in the field of taxation having primarily a revenue objective in mind. The rules governing the financing of the EU budget are indeed adopted on a different legal basis and by different institutional bodies. These differences are reflected in the EC Treaty by the distinction drawn between “tax provisions” (Articles 90 to 93 EC) under Title III (Common Policies) and “financial provisions” (Articles 269 to 280 EC).

9. Therefore, European tax law exists despite the absence of a genuine European tax system. As a consequence, those few EC Treaty Articles which explicitly or implicitly refer to taxation find their justification in their contribution to Community policies, and in particular to the objective of the **achievement of the Internal market**. In order to further the Internal market, the EC Treaty provides for two types of tax provisions which aim at removing obstacles to intra-Community trade that result from the exercise of taxation powers by Member States.

---

6 The exemption and imputation methods can both be applied on an “overall” and on a “per country” basis. With a “per country” limitation, an excess tax credit in relation to one State cannot be offset against tax credits remaining unused in relation to other States. The “overall” limitation allows the credit to be calculated on the global amount of income earned abroad.

7 The OECD MC governs relations between developed countries. The UN Model Convention (the 1st edition of which was published in 1980) has been developed in order to cover the specific needs for tax treaties between developed and developing countries based on the statement that the OECD Model was less suitable for capital importing or developing countries. The general pattern of the articles follows the one of the OECD Model (Introduction. to the OECD MC Commentary, at 14). However, the UN Model globally grants more taxation rights to the source State (Introduction. to the UN MC Comm. at 3).

The first type of EC Treaty provisions enables the Council (and only the Council) to adopt harmonization directives in the field of taxation. The second type regards general prohibitions for Member States to establish or maintain obstacles to intra-Community movement and trade. From the taxpayers’ perspective, such prohibitions create individual rights and freedoms, directly enforceable before national and European courts.

10. In respect of indirect taxation, a distinction between empowerment provisions and – directly applicable – tax prohibitions is clearly drawn in the EC Treaty. On the one hand, Article 93 EC empowers “the Council ... acting unanimously on a proposal from the Commission and after consulting the European Parliament and the Economic and Social Committee, [to] adopt provisions for the harmonisation of legislation ... of indirect taxation to the extent that such harmonisation is necessary to ensure the establishment and the functioning of the internal market ...”. This legislative power in the area of indirect taxation has been exercised as regards value added tax, excise duties and indirect taxes on the raising of capital9. On the other hand, Article 90 EC prohibits discriminatory internal taxation10. Together with Article 25 EC, prohibiting customs duties and charges having an equivalent effect, these tax prohibitions aim at ensuring the free movement of goods in the Community and the effectiveness of the Customs Union11.

11. As regards direct taxation, the above-mentioned two types of provisions –empowerment and prohibitions – are to be found in the EC Treaty, although their wording does not explicitly refer to taxation. Concerning Treaty articles founding the power to adopt regulations or directives in direct tax matters, it must be emphasised that the EC Treaty does not explicitly grant legislative competence to the Council in the area of direct taxation, neither alone or jointly with the European Parliament12. Moreover, Article 95 EC explicitly excludes taxation from its scope of application. This does not mean however that legislative acts regarding direct taxation cannot be adopted, but rather that such provisions can only be adopted on the basis of general clauses such as Articles 94 or 308 EC, and only to the extent that these acts serve Community objectives. Moreover, and independently of the provisions on taxation, the EC Treaty confers upon European citizens general rights and freedoms aimed at guaranteeing non-discrimination and freedom to circulate and to undertake economic activities throughout the Community. These rights and freedoms are the free movement of workers (Articles 39 to 42 EC), the right of establishment (Articles 43 to 48 EC), the freedom to provide and to receive services (Articles 49 to 55 EC), the free movement of capital and payments (Articles 56 to 60 EC), and, since the Treaty of Maastricht, the right to move and reside freely within the territory of the EU (Article 18 EC). Since the scope of application of these rights and freedoms is not limited to the extent of the Community's legislative competence, it encompasses the direct tax provisions of the Member States.

9 A complete list of Community legislation in the field of indirect taxes is available on the EUR-Lex site (http://eur-lex.europa.eu/).
10 Article 91 EC, on excessive export tax repayments and Article 92 EC on direct taxes paid affecting exports, have lost their original relevance, due to the evolution of the legislative framework in the area of the taxation of goods, See Farmer, P., and Lyal, R., EC Tax Law, Oxford, Clarendon Press, 1994, p. 77-82.
11 Articles 25 and 90 EC have distinct but complementary scopes of application. See ECJ, 8 June 2006, Case C-517/04, Visserijbedrijf D. J. Koonstra & Zn. vof v Productschap Vis, ECR I-5015; 9 September 2004, Case C-72/03, Carbonati Apuani v Comune di Carrara, ECR I-8027.
12 Article 293 EC is viewed as a mere exhortation to the Member States to negotiate agreements in order to remove double taxation. It does not grant competence to the Community and is not directly enforceable by the courts (ECJ, 12 May 1998, Case C-336/96, Gilly v Dir. Services fiscaux Bas-Rhin, ECR I-2793, paras. 15-17). Moreover, it has been abrogated by the Treaty of Lisbon.
According to settled case-law, “although, as Community law stands at present, direct taxation does not as such fall within the purview of the Community, the powers retained by the Member States must nevertheless be exercised consistently with Community law.”

2. EC legislative acts in the field of direct taxation

12. Relatively scarce secondary legislation has been enacted by the Council in the area of direct taxation on the basis of Article 94 EC on the approximation of laws. Direct taxes may cause distortions with regard to the location of employment, to the investment in, and to the establishment of companies inside the European Union. Some of these obstacles to the achievement of the Internal market have been the object of two “packages” of EC legislation, adopted in 1990 and in 2003.

13. Concerning company taxation, the Council has so far adopted three directives. The Merger Directive aims at mitigating the negative tax consequences that arise from reorganising one or more companies at a European level.

The Parent-Subsidiary Directive ensures that cross-border payments of dividends within the same group of companies established in different Member States do not suffer economic double taxation.

The Interest-Royalties Directive provides for the elimination of double taxation of interest and royalties between associated companies which are resident in different Member States, by exempting them from taxation in the State of source.

These three Directives are supplemented by the Arbitration Convention, adopted by the Member States on the basis of Article 293 EC in order to address the problems of transfer pricing of goods, services and intangibles between associated companies.

14. In the area of personal taxation, the only legislative act adopted by the Council is the Savings Directive. This Directive does not harmonize the provisions of the Member States as regards the taxation of interest received from savings. Its objective is rather to enhance the exchange of information between Member States, and even between Member States and a number of third countries (Switzerland, Andorra, Liechtenstein, San Marino and Monaco). In its intra-Community role, it aims at reinforcing the administrative co-operation mechanisms contained in the Mutual Assistance Directive 77/799/EEC and in Directive 76/308/EEC on mutual assistance for the recovery of claims.

---

18 Convention 90/436/EEC, OJ L 225, 20.8.1990, pp. 10–24 and OJ C 160, 30.6.2005, pp. 11–22, amended by the Convention of 21st December 1995 on the accession of Austria, Finland and Sweden to the Arbitration Convention, the Protocol of 25 May 1999 amending the Arbitration Convention and the Convention signed on 8 December 2004 by the Czech Republic, Estonia, Cyprus, Latvia, Lithuania, Hungary, Malta, Poland, Slovenia and Slovakia on their accession to the Arbitration Convention. This instrument has not yet yielded significant results. However, several Communications containing guidelines should render its application more effective. More details on the EU Joint Transfer Pricing Forum are available on the DG TAXUD website (see fn 17).
3. Other EC acts and initiatives in the field of direct taxation

15. Besides the EC legislation and the case-law of the Court of Justice, several initiatives of the EC Commission deserve a mention. These actions have not only been taken in order to enhance co-ordination between national tax systems and to remove obstacles to the freedoms of movement, but also in order to reduce harmful tax competition between Member States.

a) Fight against harmful tax competition

16. The problems caused by divergences between the corporate income tax systems of the Member States, among which (harmful) tax competition, have been the object of numerous reports and studies on behalf of the Commission since the very start of European integration. In the 1990’s, the difficulties faced by the Commission in its attempts to achieve an agreement among the Member States on a legislative act in this field led to the adoption of a soft law approach, reflected in the Monti Report. This method was the basis of the Council's Code of Conduct for Business taxation, the implementation of which, namely through the “Primarolo Report”, led to the dismantling of national tax regimes that had been found “harmful”, like the Belgian Coordination Centres, the Irish International Financial Services Centre (Dublin) or the Dutch finance companies. The Code has been extended to the new Member States.

b) Prohibition of fiscal State aid and use of tax incentives

17. The effectiveness of the soft law approach has been strengthened by the parallel actions of the Commission concerning fiscal State aid. Indeed, harmful tax measures may also constitute State aid incompatible with the Common Market within the meaning of Articles 87 and 88 EC. In 1998, following the Code of Conduct, the Commission released a “notice on the application of the State aid rules to measures relating to direct business taxation”, the implementation of which was examined in a Commission Report in 2004. These documents confirm the applicability of Articles 87 and 88 EC to direct tax measures and provide guidelines for the Member States.

The Court of Justice substantially agrees with the Commission’s views on fiscal State aid, although certain divergences can be observed in respect of the time frame for the implementation of the Code of Conduct as to regimes which are also covered by Articles 87 and 88 EC29 and to regional taxation30. Nevertheless, tax incentives in favour of undertakings have also been the object of more positive attention by European institutions, especially in the field of research and development, in line with the Lisbon objectives31.

c) Towards coordination and harmonization of corporate taxation

18. The Code of Conduct and the rules on State aid restrict the power of the Member States to adopt measures that are liable to affect free and fair tax competition between enterprises and even, to a certain extent, between the Member States themselves. However, recent initiatives tend to promote a more co-operative manner of achieving the objectives of the Internal market, while taking into account the Member States’ need to preserve their tax resources and to fight tax evasion and avoidance. Besides the initiatives in the field of transfer pricing (implementation of the Arbitration Convention 90/436/EEC), the Commission addresses concrete issues, in line with a strategy set out in the 1996 Monti Report and in the programmatic Communications of 2001, 2003 and 200632. Co-ordinated solutions have been proposed in two areas in which the Court of Justice has issued important decisions that have triggered the need to adopt a common approach, i.e. exit taxes and compensation of cross-border losses33 – this latter issue having also been the object of a Parliament resolution34. The fight against tax fraud and tax evasion has also been the object of recent initiatives, in the fields of both direct and indirect taxation35. However, as regards corporate taxation, the most significant project of the Commission is its proposal for a Common consolidated corporate tax base (CCCTB), announced for the end of 2008. This ambitious project had already been suggested in 2001 in line with the Lisbon Strategy36.

30 ECJ, 6 September 2006, Case C-88/03, Portugal v Commission, ECR I-7115.
33 Commission Communications of 19 January 2006, Treatment of Losses in Cross-Border Situations, COM (2006) 824 and Exit taxation and the need for co-ordination of Member States’ tax policies, COM (2006) 825. These Communications refer respectively to the Marks and Spencer (C-446/03), the de Lasteyrie du Saillant (C-9/02) and the N. (C-470/04) cases.
Since 2004, working groups of Members States’ experts and Commission’s delegates have been clearing the ground. The Parliament has issued resolutions to support the project, and the Commission intends to present a proposal for 2008.

The CCCTB should provide a comprehensive and sustainable solution to remove numerous existing tax obstacles faced by European undertakings operating in more than one Member State. More precisely, the objectives are the adoption of common rules defining the tax base and not the tax rate of companies, in order to reduce the compliance costs arising from the differences between the 27 national corporate tax systems and the creation of a consolidation mechanism at European level, in order to permit cross-border compensation of losses and to avoid transfer pricing disputes. This latter goal implies inevitably the setting up of a fair, equitable and simple - sharing mechanism (“apportionment”) of the consolidated tax base between the Member States concerned, mainly in order to avoid artificial profit shifting between Member States and to mitigate harmful tax competition. Since the project only concerns the tax base, each Member State would then remain competent to apply its own tax rate to the portion of the companies’ pan-European tax base attributed to its jurisdiction.

19. Of course, such a thorough reform raises a number of issues. Some of them are more technical, such as, among others, the relation between the rules for the determination of the tax base and the existing accounting rules - national or international -, the perimeter of the consolidation group or the optional or compulsory character of the CCCTB. Other issues are more political, i.e. the willingness to accept further integration in (direct) tax matters, the abandonment of the Member States’ power to grant tax incentives in the form of a reduction of the tax base, not to mention the necessity to improve the cooperation between Member States. Indeed, one cannot underestimate the administrative and judicial apparatus that should be put in place to make the system work. At the moment, since various Member States have clearly declared that they would not participate in such a project, the possibility of enhanced cooperation has already been mentioned, although such option would be, according to the Commission, a “last resort approach”. Moreover, enhanced cooperation would certainly add further complexity to the already sensitive issues to be solved.

C. THE ROLE OF THE EUROPEAN COURT OF JUSTICE IN MATTERS OF DIRECT TAXATION

20. As regards direct taxation, the Court of Justice becomes involved following either an infringement procedure initiated by the Commission (and possibly by a Member State – Article 227 EC) or the request of a national jurisdiction for a preliminary ruling concerning the interpretation of EC law.

---

Contrary to infringement procedures, where the Court may declare national rules to be incompatible with EC law, preliminary rulings admit merely indirect control of national legislation. In fact, in a preliminary decision, the Court interprets Community law to the extent it may affect the specific legal provisions at stake in particular proceedings before a national judge.

On the basis of Article 10 EC, Member States are obliged to accept all the consequences of the Court's rulings and to implement them in their national law, in accordance with general principles forming part of the Community’s legal order, such as **effectiveness**, **equivalence** and **legal certainty**. According to the Court, when a national tax measure is found to infringe European law, taxpayers may obtain a refund of unduly paid taxes by claiming it before national jurisdictions according to the national procedural rules, which can lead to serious financial repercussions for the budget of a Member State (see no.219).

21. The role of the Court is not limited to the strict application and interpretation of the Treaty and of the secondary legislation. The Court has also developed an array of general legal principles which are relevant in the area of taxation. An eloquent example can be found in the principles of **protection of the taxpayers’ legitimate expectations** or of legal certainty. Although this principle is not written in the Treaty nor in any tax directive, it is part of Community law, and it can protect taxpayers against, for example, retroactive tax laws, at least in harmonized areas. Another important principle in the area of taxation is the principle of **proportionality**, according to which national measures restricting the individual freedoms cannot exceed what is necessary to attain their legitimate objectives. In tax matters, the Court has made applications of this principle in order to limit the scope of national anti-abuse provisions.

22. Some cases concern the application and interpretation of the direct tax Directives. Concerning the Parent Subsidiary-Directive, the Court of Justice has for example clarified the notions of “withholding tax” (**Epson Europe**, **Athinaiki Zithopoïaa**, **Océ van der Grinten**) and “holding period” (**Denkavit and others**). Concerning the Merger Directive, the Court has also contributed to the definition of the operations which fall within its scope of application (**Andersen og Jensen**, **Leur-Bloem**, **Kofoed**).

---

40 See for example ECJ, 3 December 1998, Case C-381/97, *Belgocodex v Belgian State, ECR* I-8153.
44 This principle has to be distinguished from the principle laid down at Article 5 EC Treaty, governing the attribution of powers to the EC. See Protocol (no 30) on the application of the principles of subsidiarity and proportionality (1997).
45 See e.g. ECJ, 13 March 2007, Case C-524/04, *Test Claimants in the Thin Cap Group Litigation, ECR* I-2107, p. 83.
46 ECJ, 8 June 2000, Case C-375/98, *Epson Europe, ECR* I-4245.
52 ECJ, 5 July 2007, Case C-321/05, *Kofoed v Skatteministeriet*. 
23. However, the overwhelming majority of the cases decided by the Court of Justice deal with the compatibility of direct tax provisions of the Member States with the EC Treaty freedoms, in particular the free movement of persons, the free provision of services and the free movement of capital.\(^{53}\)

The **free movement of persons** covers the right of employees to take up residence for work purposes (Article 39 EC) and the right of undertakings (i.e. companies) and self-employed people to set themselves up or to open branches, subsidiaries or agencies in other Member States (Articles 43 to 48 EC). As regards shareholders, the Court has held that the situation must be appreciated from the perspective of the freedom of establishment when the “holding gives [the shareholders] definite influence over the company’s decisions and allows them to determine its activities”\(^{54}\).

In contrast to the right of establishment, which addresses permanent establishments, the **free movement of services** encompasses temporary economic activity carried out in another Member State. Article 49 EC not only assures the provider of a service the right to enter the market of another Member State and to be treated there in the same way as a domestic service provider, but it also protects the recipient of that service.

The **free movement of capital** prohibits obstacles to cross-border investments such as direct investments, portfolio investments, or the acquisition and sale of immovable property. It applies in situations where a person neither pursues an economic activity nor has a permanent presence in the State in which the tax measure under challenge has been enacted\(^{55}\), or where a shareholder has an “insufficient level of participation” in a company in order to benefit from Article 43 EC\(^{56}\).

In ascertaining which freedom is to be applied, the Court states that “the purpose of the legislation concerned must be taken into consideration”\(^{57}\). The distinction between the free movement of capital and the other freedoms is of particular importance with regard to non-EU States, since the free movement of capital extends to such third States\(^{58}\), whereas the exercise of other freedoms is restricted to Community borders.

24. The four freedoms encompass two dimensions: a right of **cross-border circulation** and a **prohibition of discrimination** on grounds of nationality. In applying EC freedoms in tax matters, the Court of Justice examines first whether the national tax provisions in question create an overt (direct) discrimination on the grounds of nationality, then, if not, whether these provisions have a restrictive effect on cross-border movement, which indirectly lead to the same result (covert or indirect discrimination)\(^{59}\). Income tax raises a specific difficulty in this context, as it usually refers to residence as a connecting factor rather than to nationality.

---

\(^{53}\) The free movement of goods has rarely been invoked in respect of direct taxation matters. See ECJ, 7 May 1985, Case 18/84, *Commission v France*, *ECR* 1339 and ECJ, 7 March 1990, Case C-69/88, *Krantz v Ontvanger der directe belastingen*, *ECR* I-583.

\(^{55}\) See, e.g. ECJ, 11 October 2007, Case C-451/05, *ELISA v Directeur général des impôts*.

\(^{56}\) *X and Y*, para. 67.

\(^{57}\) For instance, see ECJ, 24 May 2007, C-157/05, *Holleböck*, *ECR* I-4051 para. 22.

\(^{58}\) Nevertheless, Article 57 EC provides for a standstill clause regarding relations with third countries and allows the continued application of restrictive measures that existed already on 31 December 1993.

\(^{59}\) For example, ECJ, 13 July 1993, Case C-330/91, *Commerzbank*, *ECR* I-4017, paras.14, 15, 19.
However, since the Court considers that the use of the residence criterion by Member States is likely to favour their own nationals\(^{60}\), the key to identifying whether a measure at issue is incompatible with EC Law lies therefore in establishing whether an unjustified difference of treatment is made between residents and non residents that are in “objectively comparable” situations for the purpose of the application of the challenged tax provisions\(^{61}\).

25. According to the Court of Justice, overt discrimination may be justified either by those grounds set out explicitly in the EC Treaty (such as public policy, public security and public health) whereas a restrictive measure is permissible “only if it pursues a legitimate objective compatible with the Treaty and is justified by imperative reasons in the public interest”. Furthermore it must “not go beyond what is necessary to attain the objective pursued”\(^{62}\). In the field of direct taxation, several justifications could potentially apply: the need for effective fiscal supervision\(^{63}\); the need to maintain fiscal cohesion\(^{64}\), the prevention of abuse\(^{65}\) or the need to protect the balanced allocation of taxing powers between Member States\(^{66}\). In contrast, the Court has never accepted justifications like the prevention of a reduction of tax revenue\(^{67}\) or the existence of other, compensating, tax advantages\(^{68}\).

\(^{60}\) Schumacker, para. 28 : “However, national rules of that kind, under which a distinction is drawn on the basis of residence in that non-residents are denied certain benefits which are, conversely, granted to persons residing within national territory, are liable to operate mainly to the detriment of nationals of other Member States. Non-residents are in the majority of cases foreigners”.

\(^{61}\) An increasing number of ECJ rulings seem to focus rather on the restrictive effect of national measures on cross-border movements (“non-discriminatory restrictions”). For example, ECJ, 15 May 1997, Case C-250/95, Futura Participations and Singer, ECR I-2471, para 26.

\(^{62}\) For example ECJ, 11 March 2004, Case C-9/02, de Lasteyrie du Saillant, ECR I-2409, para. 49.

\(^{63}\) For example, Futura Participations and Singer, para. 31; ECJ, 8 July 1999, Case C-254/97, Baxter, ECR I-4811, paras. 18-19 and ECJ, 22 March 2007, C-383/05, Talotta, ECR I-2555, paras. 34-37.

\(^{64}\) ECJ, 28 January 1992, Case C-204/90, Bachmann v Belgian State, ECR I-249.

\(^{65}\) ECJ, 18 July 2007, Case C-231/05, Oy AA, paras. 62-63.

\(^{66}\) See ECJ, 8 November 2007, C-379/05, Amurta, para. 56.

\(^{67}\) ECJ, 16 July 1988, Case C-264/96, ICI, ECR I-4695, para. 28; ECJ, 21 September 1999, Case C-307/97, Saint-Gobain, ECR I-6163, para. 50.

\(^{68}\) Saint-Gobain, para. 53 and C-294/97, Eurowings, para. 44.
II. ANALYSIS OF THE CASE-LAW OF THE COURT AND OF ITS IMPLEMENTATION BY THE MEMBER STATES

26. In the field of direct taxation, the Court of Justice is faced primarily with questions referred to it for a preliminary ruling. The Court provides to the national judges answers enabling them to decide the case pending before them. Furthermore, the number of infringement procedures launched by the Commission against Member States potentially not complying with EC law that comes before the Court is growing.

27. Member States have the obligation under the Treaty to respect the Court’s decisions, be it preliminary rulings or decisions in infringement procedures. Therefore, national jurisdictions must apply Community law as interpreted by the Court and Member States have to adapt their domestic rules accordingly. While they are free as to the means, they must respect efficient implementation. Court’s decisions are part of the “acquis” to be implemented by candidate countries before their accession.

28. However, the Court’s rulings give rise to interpretation. In this context, it is not surprising that implementation of the Court’s rulings varies amongst Member States, even at the level of domestic jurisdictions. A great difference exists between Member States as to the number of cases in which their legislation has been scrutinized by the Court. On December 31st, 2007, no case had been decided involving the direct tax system of “old” Member States like Italy or Ireland (outside State aid), while the tax legislations of the Netherlands, Germany, the United Kingdom and even Finland are regularly challenged before the ECJ. Moreover, different attitudes can be observed as to the efforts made by Member States to adapt their tax legislation to the EC requirements. Regarding the new Member States, it is difficult to appreciate in which measure the gaps noticed in the integration of the “acquis” stem from difficulties of interpretation of the case law of the Court.

29. However, it seems that there is no direct link between the number of cases referred to the ECJ and the legislative changes made by Member States to adapt their direct tax system to the EU requirements. For example, very few direct tax cases involve Austria, while that Member States has undertaken numerous reforms in order to comply with the EC freedoms as interpreted by the ECJ in judgements regarding other countries. The same diligence can be observed in Finland, a country whose legislation is often the object of ECJ rulings. On the other hand, despite the lack of ECJ direct tax decisions concerning Italy, the Italian direct tax system seemingly presents features that could hinder the effectiveness of the EC freedoms.

69 Cf. the annexes at this end of the study.

71 As an example, some new Member States apply tax incentives that are likely to contravene State aid provisions (see Devereux, M., “Taxes in the EU New Member States and the Location of Capital and Profit”, 2006, University of Warwick, IFS and CEPR, 2006, p. 9)

72 Potential incompatibilities of the Finnish income tax system with EC law remain, such as the rule extending the tax sovereignty of Finland to former resident taxpayers during a period of three years after their moving abroad. See Aima, K., “Finland”, in Brokelind (2007), p. 209.

73 Pistone, P., “Italy”, in Brokelind (2007), p. 330-331. The Porto antico di Genova case (ECJ, 25 October 2007, Porto Antico di Genova v. Agenzia delle Entrate Genova) is connected to direct taxation, but cannot be considered relevant since it does not concern either the tax Directives or the EC freedoms, but the taxation of Community grants. Moreover, the Commission has decided almost two years ago to bring Italy before the ECJ on the tax treatment of foreign shareholders, but has not yet acted accordingly. See Commission decision of 12.12.2006 in the infringement procedure 2004/4350 and Commission Press release IP/07/66 of 22 January 2006. However, numerous ECJ tax cases concerning Italy have been decided in the area of indirect taxation (mainly VAT).
This section aims at providing an analysis of the Court’s decisions in the field of direct taxation rendered until 31st of December 2007. In addition, it gives an overview of the implementation of the Court rulings in the Member States in grey shaded boxes. The case-law has been subdivided according to the types of taxpayers involved, e.g. individuals (A), companies (B) and shareholders (C).

A. TAXATION OF INDIVIDUALS

Regarding the application of EC freedoms, the issues addressed in the area of personal taxation cover a very wide range of situations. In the income tax systems of the Member States, individuals are treated not only as economic operators but also as persons enjoying certain rights and benefits in relation to their individual or social needs, whether or not these are connected to their economic activity. For example, most Member States grant tax advantages to married persons, or allow tax deductions for contributions to pension schemes. Throughout the years, the Court of Justice has developed a case-law which, starting from the application of the economic freedoms, has progressively widened its scope to a much broader recognition of European citizenship in tax matters, based on Articles 12 and 18 EC, introduced by the Maastricht Treaty74.

1. Transfer of residence

According to the Court's settled case-law, “provisions which prevent or deter a national of a Member State from leaving his State of Origin to exercise his right to freedom of movement constitute an obstacle to that freedom ...”75. The Court dealt with such a provision in an early case on direct taxation of individuals (Biehl76). The case concerned a Luxembourg tax provision that excluded the possibility of a refund of an excess of income taxes withheld in a case where the employee had transferred his residence from Luxembourg to another Member State in the course of the year. The Court held such provision incompatible with the free movement of workers under Article 39 EC: “the principle of equal treatment with regard to remuneration would be rendered ineffective if it could be undermined by discriminatory national provisions on income tax ...”77. Luxembourg did not comply with the ruling. Hence, the Commission launched an infringement procedure, in which the Court decided that the relevant provisions were in breach of EC law (Biehl II)78.

The Court has dealt in more recent cases with national tax provisions which hinder an individual's ability to transfer his residence from one Member State to another79. For example, the application of exit taxes on unrealized capital gains on shares owned by individuals transferring their residence to another Member State or of taxes on persons emigrating to another Member State after their retirement often lead to situations of double taxation80.

74 ECJ, 11 July 2002, Case C-224/98, D'Hoop v Office national de l'emploi, ECR I-6191.
75 ECJ, 12 December 2002, Case C-385/00, de Groot v Staatssecretaris van Financiën, ECR I-1181, para. 79; ECJ, 13 November 2003, Case C-209/01, Schilling v Finanzamt Nürnberg-Süd, ECR I-13389, para. 25. This principle is also applied outside the field of taxation: ECJ, 2 October 2003, Case C-232/01, Criminal proceedings against Van Lent, ECR I-11525, para. 16.
76 ECJ, 8 May 1990, Case 175/88, Biehl v Administration des contributions du Luxembourg, ECR 273.
77 Biehl, para. 12.
78 ECJ, 26 October 1995, Case 151/94, Commission v Luxembourg (Biehl II), ECR I-3685.
79 The double payment of social security contributions can also be a deterrent to a transfer of residence: ECJ, 26 January 1999, Case C-18/95, Terhoeve, ECR I-345, para. 42.
80 On the taxation of pensions, see no. 44 et seq. On the taxation of capital gains, see no.126 et seq.
33. However, “the EC Treaty offers no guarantee to a citizen of the Union that transferring his activities to a Member State other than the one in which he previously resided will be neutral as regards taxation.” 81 The Treaty indeed prohibits only direct or indirect discrimination or unjustified obstacles to the exercise of the EC freedoms. It does not address disadvantages which arise out of mere disparities between the tax systems of the Member States, like the transfer of residence from a Member State which applies progressive taxation on income to another Member State which applies a similar system with higher brackets. 

_A fortiori_, the Treaty, and in particular Article 18 EC, does not as a rule protect taxpayers against the negative tax consequences of a relative’s transfer of residence. In _Schempp_, the transfer of residence from Germany to Austria of the taxpayer's ex-wife gave rise to the consequence that he could no longer deduct from his income the maintenance allowance which he paid to her. The Court held that there was no breach of Article 18 EC, since the wife had moved to a Member State in which income derived from maintenance payments was not taxable, while in Germany the deductibility of such payments from the income of the payer was balanced by the taxation of such income in the hands of the beneficiary. 82

Finally, in relation to a transfer of residence from a Member State to a third country, the Court has stated, in _Van Hilten-Van der Heijden_, that “the mere transfer of residence from one State to another” does not fall within the scope of free movement of capital (Article 56 EC) 83, the only freedom applicable to third countries.

2. Income from cross-border economic activity (employed or self-employed)

34. The core of the Court's case-law in the area of cross-border economic activity concerns discrimination by Member States towards non-resident workers, whether employed or self-employed, and irrespective of the fact that they were previously resident in this Member State. For employed workers, such situations are not only generally covered by Article 39 EC, but are also explicitly mentioned in Article 7 of Regulation 1612/68, which states that non-resident workers “shall enjoy the same … tax advantages as national workers” 84.

According to the Court, those provisions do not impede the application by Member States of different tax rules or tax systems to resident and non-resident natural persons, since these two categories of persons are generally not comparable 85.

81 ECJ, 12 July 2005, Case C-403/03, _Schempp v Finanzamt München_, ECR I-6421, para. 45. The Court has issued the same statement in cases involving indirect taxation, for example, ECJ, 29 April 2004, Case C-387/01, _Weigell v Finanzlandesdirektion für Vorarlberg_, ECR I-4981, para. 55 (on Article 39 EC) and also in cases concerning social security regulations, e.g. 19 March 2002, Cases C-393/99 and C-394/99, _INASTI v Herven and Hervilli and Lorthios and Comtexbel_, ECR I-2829, para. 51 (on Article 43 EC).

82 _Schempp_, para. 46. This case has been the object of criticism by authoritative European academics. See among others Lang, M., ‘Das EuGH-Urteil in der Rechtssache Schempp - Wächst der steuerpolitische Spielraum der Mitgliedstaaten?’, _SWI_, 2005, p. 411.

83 ECJ, 23 February 2006, Case C-513/03, _Van Hilten-Van der Heijden_, ECR I-1957 para. 49. See also Opinion AG Léger in this case, para. 58.

85 According to the Court “there are objective differences between them, both from the point of view of the source of the income and from the point of view of their ability to pay tax or the possibility of taking account of their personal and family circumstances” (ECJ, _Schumacker_, paras. 31-34; 11 August 1995, Case C-80/94, _Wielockx v Inspecteur der Directe Belastingen_, ECR I-2493, para. 18; ECJ 27 June 1996, Case C-107/94 _Asscher_, _ECR_ I-3089 para. 41). In _Asscher_, however, the ECJ ruled that Member States could not apply a higher tax rate to non-residents without proper justification (_Asscher_, para. 49; see also ECJ, 12 June 2003, Case C-55/98, _Gerritse v Finanzamt Neukölln-Nord_, ECR I-5933, para. 54).
However, depending on the circumstances of the case, the Court may consider that a specific tax burden imposed only on non-residents, or the denial by a Member States to non-residents of a tax advantage available to residents, constitutes a discrimination if “there is no objective difference between the situations of the two such as to justify different treatment in that regard”\textsuperscript{86}.

An example of the first situation was found in \textit{Talotta}\textsuperscript{87}, which concerned a self-employed resident of Luxembourg who was running a restaurant in Belgium. The Court stated that a Belgian provision which laid down minimum tax bases, and which was only applicable to foreign undertakings operating in Belgium, was not compatible with the freedom of establishment and could not be justified by the need to ensure the effectiveness of fiscal supervision.

\begin{table}[h]
\centering
\begin{tabular}{|l|}
\hline
Belgium amended its legislation so that, as of assessment year 2005, resident taxpayers could also be subject to taxation on a minimum basis\textsuperscript{88}.
\hline
\end{tabular}
\end{table}

As regards the second situation, a distinction can be drawn, for the sake of clarity, between national measures denying to non-residents advantages conditional upon their personal and family situation, and national measures denying the deduction of costs and expenses in relation to an economic activity undertaken by non-residents.

\paragraph*{a) Tax advantages related to the personal and family situation}

35. The leading case in that respect is \textit{Schumacker}\textsuperscript{89} which concerns a Belgian resident employed in Germany. Because of his non-resident status, Mr. Schumacker was denied in Germany the “splitting regime”, an income tax regime allowing couples to benefit from a lower progression, and the procedural advantage of an overall tax assessment at the end of the year, as both advantages were only granted to German residents. Such legislation was considered to be contrary to Article 39 EC.

The \textit{Schumacker} doctrine can be summarized as follows:

- The Court accepts the general principle of international tax law, embodied in the OECD Model convention, according to which personal and family circumstances have to be taken into account in the State of residence applying \textit{worldwide taxation}\textsuperscript{90}.

- Exceptions to this principle must be made when the non-resident taxpayer undertakes \textit{significant economic activity} in the Member State. In this case, he is deemed to be in a situation comparable to that of the taxpayers resident of that State if he derives his income entirely or almost exclusively from the economic activity which he performs in that State\textsuperscript{91}.

\textsuperscript{86} Schumacker, paras 36-38, and Asscher, para. 42.
\textsuperscript{87} ECJ, 22 March 2007, Case C-383/05, Talotta v Belgian State, ECR I-2555.
\textsuperscript{88} However, discrimination might still subsist in some cases: see Malherbe, J. and Wathelet, M., 'Incompatibilité avec l'article 43 du traité CE de la législation belge prévoyant une assiette minimum pour les seuls contribuables non-résidents', \textit{Dr. Fiscal}, 2007, p. 850.
\textsuperscript{89} ECJ, 14 February 1995, Case C-279/93, Finanzamt Köln-Altstadt v Schumacker, ECR I-225.
\textsuperscript{90} See also ECJ, 14 September 1999, Case C-391/97, Gschwind v Finanzamt Aachen-Außenstadt, ECR I-5451, para. 23; Gerritse, para. 44; ECJ 6 July 2006, Case C-346/04, Conijn v Finanzamt Hamburg-Nord, ECR I-6137, para.17.
\textsuperscript{91} \textit{De Groot} para. 89. However, according to the Court the application of criteria adopted in double taxation conventions between Member States could justify, in some circumstances, differences in treatment between resident and non-resident taxpayers. See, concerning frontier workers, ECJ, 12 May 1998, Case C-336/96, \textit{Gilly v Directeur des services fiscaux du Bas-Rhin}, ECR I-2793.
Interestingly, the 1995 Court judgement followed the **Commission’s unsuccessful attempts** to harmonize the income tax systems of the Member States in this respect, first through the 1979 Commission proposal for a directive concerning the harmonization of income taxation provisions with respect to freedom of movement for workers within the Community, which was withdrawn in 1993, and then through “soft law”, with the Commission Recommendation 94/79/EC of 21 December 1993 on the taxation of certain items of income received by non-residents in a Member State other than that in which they are resident\(^2\).

### 36. The Court refined its position in *Gschwind*. It considered the German legislation, as amended after *Schumacker*, to pose no further problems of compatibility with EC law\(^3\). German law extended the treatment given to residents to non-resident couples earning at least 90% of their taxable income in Germany or alternatively earning less than 24,000 DEM outside Germany\(^4\). This doctrine has been applied in other cases involving joint taxation of married couples. In *Zurstrassen*, the Court declared the denial of the lower tax scale applicable in joint assessments resulting from the fact that the spouses resided in two different Member States to be incompatible with Article 39 EC\(^5\). In *Meindl*, the Court held that, in order to calculate the 90% fraction, the State of activity could not take into consideration income of one of the spouses which was not considered taxable by the Member State of such spouse’s residence\(^6\).

\(^3\) *Gschwind*, para. 6;
\(^4\) *Gschwind*, para. 32. Commission Recommendation 94/79/EC (see above) referred to a 75% threshold.
Even though the Schumacker doctrine is clear in principle, it appears to be difficult to implement in practice. Only some Member States seem to comply with the Schumacker doctrine. Moreover, amongst these Member States, there are several important differences. Some countries, like the Netherlands, Austria, Germany, Luxembourg or Sweden grant non-residents the choice to opt for the worldwide taxation regime of residents under certain conditions, usually linked to the proportion of the overall income earned on their territory. Others grant to non-residents the benefit only of some, but not of all the tax advantages linked to the resident status, also provided that the non-residents earn a minimum of 75% or of 90% of their worldwide income in the State of source.

A brief comparison between the Dutch, the Austrian and the German system shall enlighten the differences in the first category of States. The Netherlands have adopted an optional system allowing non-residents to be treated like resident taxpayers, which means that they are taxed on their worldwide income, provided that they are resident in an EU Member State or in countries with which the Netherlands has concluded a DTC containing an exchange of information clause.

Austria allows the same option to EU nationals, wherever they reside, who earn more than 90% of their income in Austria or earn less than 10,000 € outside Austria and limits the resident treatment to the income sourced in the country.

A third system applies in Germany, which also has the 90% threshold, but sets up the alternative maximal foreign sourced income criterion at 6,136 € and leaves the option of being taxed as a resident open to all non-residents, while, amongst these, only EEA nationals are entitled to certain tax benefits such as the deduction of alimony payments (Schempp) or the joint assessment of spouses (Zurstrassen).

Luxembourg grants the resident treatment to non-residents earning more than 90% of their professional income in the country; the tax is computed taking into account foreign professional income (reserve of progression); the regime is optional and does not apply if less favourable. Belgium, Cyprus, the Czech Republic and Latvia extend the benefit of personal and family provisions to qualifying non-residents.

97 This seems to be generally the case in Austria, Germany, Greece, Luxembourg, the Netherlands, Slovenia, Spain and Sweden (Lenaerts, K., and Bernard, L., “L’encadrement communautaire de la fiscalité directe”, Cah. dr. eur., 2007, p.75).
98 Dutch Income Tax Law, Article 2(5). The non-resident is however entitled to a tax relied for the items of income that are taxable in other States according to DTCs or Dutch national law.
99 Income tax law, sec. 1(4). This regime is also applicable to EEA nationals and to nationals of countries with which Austria has signed a DTC. See Köfler, G., ‘Austria’ in Brokelind (2007), p. 70-71.
100 TNS-218 (1997).
102 A.o. Belgium, Denmark, Estonia, Finland (as from 1st January 2006), Hungary, Ireland, Latvia, Spain.
103 For example the Czech Republic, Greece, Luxembourg.
104 Wet op inkomstenbelasting, Art. 2(5). The non-resident is however entitled to a tax relied for the items of income that are taxable in other States according to DTCs or Dutch national law.
106 Austrian Income tax law, sec. 1(4). This regime is also applicable to EEA nationals and to nationals of countries with which Austria has signed a DTC. See Köfler, G., (2007), pp. 70-71.
107 Information on Member States tax legislation has been found on the IBFD online database (December 2007).
108 Art. 157 ter LIR ; circ. of 8 January 2003, http://www.impotsdirects.public.lu. The reference to “professional income” reflects the limited scope of application of the Treaty provisions. It should be abrogated in order also to put the provision in conformity with the Lakebrink case (see Draft Law 5801 (2007/2008), art. 31 modifying art. 157ter LIR.
37. More generally, as a result of the Court’s case-law, Member States can no longer apply to non-residents a tax system differing from the system which applies to residents, such as a withholding tax based on gross earned income, denying any allowance or deduction which exists for resident taxpayers and which is linked to their personal circumstances, provided that such non-residents are in the same situation as residents. This principle has been applied by the Court in *Wallentin* to Sweden’s refusal to grant the basic allowance (minimum taxable income) to a German student without taxable income in Germany, whose only taxable income had been earned in Sweden.\(^{109}\)

After *Wallentin*, Sweden subsequently amended its legislation, provided that the taxpayer’s worldwide net earned income is exclusively or almost exclusively from Swedish source.\(^{110}\)

38. However, the EC freedoms do not oblige Member States to grant these benefits to non-residents in all circumstances. For example, insofar as the basic allowance is concerned, objective differences between residents and non-residents, such as whether the person in question is affiliated to the national social security system (*Blanckaert*)\(^{111}\) or benefits from a comparable advantage in the State of residence (*De Groot* and *Gerritse*)\(^{112}\), could justify a difference in treatment. However, the State of residence is not allowed to reduce personal and family advantages in proportion to the income earned by its residents abroad (*De Groot*)\(^{113}\).

In implementing *De Groot*, the Netherlands amended their legislation but, it would seem, not perfectly.\(^{114}\) Belgium still does not grant certain personal tax deductions to residents who earn part of their income abroad, Belgium and Austria are currently being investigated by the Commission in this respect.\(^{115}\) Finland adjusted the domestic tax rules to make the tax burden on cross-border situations equal to the domestic ones.\(^{116}\)

---

\(^{109}\) On the legitimate refusal by Member States to grant a basic allowance to non-residents, see also *Gerritse*, paras. 51-54 and ECJ, 5 July 2005 Case C-376/03, *D. v Inspecteur van de Belastingdienst*, ECR I-5821, para. 36.

\(^{110}\) Muten L.: “The effects of ECJ rulings on Member States direct tax law: introductory speech” in Brokelind (2007), p. 36. It seems that this measure is not sufficient to remove tax obstacles to the free movement of persons. When, for instance, one half of the income is earned in one country and the other half in another country. See also, as to the deduction of mortgage interests, the Commission Press Release IP/07/1163 of 24 July 2007.

\(^{111}\) ECJ, 8 September 2005, Case C-512/03, *Blanckaert v Inspecteur van de Belastingdienst*, ECR I-7685. This case was decided on the ground of the free movement of capital, because Mr Blanckaert, a Belgian resident, had no income from employed or self-employed activity in the Netherlands, but only an income from savings and investments.

\(^{112}\) See the comments of Essers, P., and Elsweier, F., ‘Dutch experience with European developments: a story of Dr. Jekyll and Mr. Hyde’, *EC Tax Rev.*, 2003, p. 82.

\(^{114}\) According to Austrian tax law certain personal expenses can be deducted from income when calculating income tax ("*Steuerabsetzbeträge*"). However, if the resident taxpayer has foreign income which is tax exempt but subject to progression, the same legislation limits this deduction to a pro rata amount of these expenses, whereas a resident with only domestic income will receive the full allowances. Cf. Commission Press Release of 26 March 2007, IP/07/414. As regards Belgium, see Commission Press Release of 20 July 2006, IP/06/1048, and comments by the Minister of Finance (P.Q. n° 13561 of 10 January 2007, Repr. Govaerts, *CRA Com. Fin. Chambre*, Com 1152, p. 8-9).

\(^{115}\) *TNS Online* 15 February 2006.
b) Deduction of costs related to the economic activity of the taxpayer

39. Income from activity performed by non-residents cannot be taxed more heavily than income earned by residents, as regards costs and expenses which are directly linked to the economic activity that generated the taxable income.

In Gerritse, German legislation which excluded almost entirely the deduction of business expenses from the taxable gross income earned in Germany by non-residents, while permitting this deduction to residents, was found to be incompatible with Article 49 EC. Moreover, in Scorpio the Court considered that a legislation which allowed the deduction of such expenses for non-residents, but only after the payment of income tax, through a refund procedure which had to be initiated by the taxpayer himself, was also contrary to EC law. According to the Court, “in that commencing such a procedure involves additional administrative and economic burdens, and to the extent that the procedure is inevitably necessary for the provider of services, the tax legislation in question constitutes an obstacle to the freedom to provide services ...”.

The Court issued a similar ruling in relation to the freedom of establishment in Conijn, a case which concerned the deduction of costs incurred in obtaining tax advice, which was only granted to residents under German legislation.

Following Scorpio, the Netherlands changed their legislation by simply abolishing, under certain conditions, the taxation of non-resident artists. This case also gives an illustration of another type of “extended” implementation of the EC freedoms, in that the Netherlands simultaneously abolished a (very similar) direct tax regime applicable to non-resident sportsmen.

On the contrary, the circular issued by the German Ministry of Finance seems to restrict the application of Scorpio, especially as regards proving a deduction for costs, the timing of cost deductions and the introduction of a net tax rate of 40%.

Likewise, the German implementation of Gerritse consisted of the release of federal administrative instructions in form of a circular issued by the Ministry of Finance. It provided an ad hoc solution, which was only available to non-residents who were both nationals of and residents in an EEA country.

117 For a comment, see Hinnekens, L., 'European Court challenges flat rate withholding taxation of non-residents: comments on the Gerritse decision', EC Tax Rev., 2003, p. 207.
118 ECJ, 3 October 2006, Case C-290/04, FKP Scorpio Konzertproduktionen GmbH/Finanzamt Hamburg-Eimsbüttel, ECR I-9461, para. 44. Cf. with Futura Participations and Singer, para. 43 (no. 61).
119 Scorpio, para. 47.
120 Conijn, para. 20-25.
122 Belgium has also abolished the specific regime applicable to non-resident sportsmen since 1 January 2008. See Belgian Ministry of Finance Circular Ci. RH.244/587.755 (AFER 45/2007) dd. 21.11.2007 published on www.fisconet.be.
123 BMF-Schreiben IV C 8 – S 2411/07/0002 of 5 April 2007.
124 See also Bundesfinanzhof, 24 April 2007, I R 39/04 giving the final decision in Scorpio that Germany can continue to charge WHT of 20%; Bundesfinanzhof, 22 August 2007, I R 46/02 and 29 November 2007, I B 181/07 applying a restrictive view of Scorpio. The Bundesfinanzhof ruled that the denial of interest on the refunded withholding tax is compatible with EC law (13 February 2008, TNS Online, 19 February 2008).
Currently, the Commission requests Germany in a reasoned opinion to modify the withholding tax system applied particularly on the income of non-resident artists and sportsmen\(^\text{126}\). Changes made by Germany to its law are not fully satisfactory to the Commission which issued a supplementary reasoned opinion\(^\text{127}\).

Some other tax systems seem not to fully comply with the ECJ case-law: the Czech Republic\(^\text{128}\), Estonia\(^\text{129}\), Italy\(^\text{130}\), Latvia\(^\text{131}\), Poland\(^\text{132}\), Portugal a.o. still apply a final withholding tax system on gross income from certain types of income or activities.

40. Discrimination in respect of income or expenses related to economic activity in other Member States may also be rooted in the legislation of a worker’s State of residence. Article 49 EC implies that Member States must allow the deduction of costs and expenses incurred in another Member State in the same manner as they allow deductions of business expenses incurred on their territory. In Vestergaard\(^\text{133}\), a Danish certified auditor, employed by a company of which he was the sole shareholder, was denied deduction of the expenses incurred attending a training course in Crete, on the grounds that such courses were deemed under Danish tax law to serve primarily touristic purposes. In contrast, such a presumption did not apply for expenses incurred on similar courses in Danish tourist resorts. This difference in treatment was held to be incompatible with the freedom to provide services.

3. Income or expenses related to pensions and social benefits

41. The Treaty freedoms provide a protection that goes beyond a mere guarantee that income (including related deductions) directly earned from cross-border activity will not be treated in a discriminatory manner by any Member State. Other items of income and corresponding deductions also enjoy Treaty protection. This is the case for pensions, whether public or private, and other social benefits. In the fiscal systems of the Member States, such items of income usually enjoy a more favourable regime than the one bearing on income from work, and the related social contributions are usually deductible for income tax purposes. At a European level, numerous harmonization directives have been adopted, although none concerning direct taxation\(^\text{134}\).

\(^{128}\) 25% final withholding tax (WHT) on income from independent activities and from services paid to non-residents.

\(^{129}\) Final WHT on gross income from artistic and sport activities and on fees from professional services provided in Estonia.

\(^{130}\) Final 30% WHT on compensation for independent work carried out in Italy by non-residents (including director’s fees).

\(^{131}\) Final WHT on artists, sportsmen and coaches, directors’ fees (25%), management and consultancy fees (10%).

\(^{132}\) Final 20% WHT on some advisory and management services, entertainment and sport activities, directors’ fees.

\(^{133}\) ECJ, 28 October 1999, Case C-55/98, Skatteministeriet v Vestergaard, ECR I-07641.

42. The case-law provides a large number of examples where the freedom of movement has been held to apply to this area. In an early example, *Bachmann*\(^{135}\), a Belgian provision that excluded the deductibility, for income tax purposes, of insurance contributions paid in another Member State, while allowing the deductibility for contributions paid in Belgium, was held to be contrary to Articles 39 and 43 EC. At that time, eight Member States out of fifteen limited in the same way the deductibility of insurance premiums to the ones paid to a resident insurance company\(^{136}\). The Court admitted that this non-deductibility was nevertheless justified by "the need to safeguard the cohesion of the applicable tax system"\(^{137}\). This is the only case in which the Court has admitted such a justification and it is likely to remain so in the light of the subsequent judgements on the income tax treatment of insurance contributions, which have progressively restricted and then abandoned the justification used in *Bachmann*\(^{138}\).

The refusal by Member States to grant the same tax treatment to insurance contributions paid to insurance companies established on their territory and to contributions paid to companies established in other Member States has also been considered by the Court to be incompatible with the free provision of services, both from the perspective of the insurance companies established in other Members State and of their clients (*Safir, Danner, Skandia/Ramstedt*\(^{141}\)).

43. The case-law contains a number of other instances of discrimination or unjustified restrictions under the EC freedoms where pensions are involved. In *Turpeinen*, the Court considered incompatible with Article 18 EC a national law subjecting a retirement pension paid in a Member State to a resident of another Member State to a higher tax burden than the same pension paid in the first Member State to one of its residents\(^{142}\). In *Pusa*, the Court considered that, in a situation involving a resident of Spain who received a pension in Finland, “[Article 18 EC] in principle precludes legislation of a Member State under which the attachable part of a pension paid ... in that State to a debtor is calculated by deducting ... the income tax prepayment levied in that State, while the tax which the holder of such a pension must pay on it subsequently in the Member State where he resides is not taken into account at all for the purposes of calculating the attachable portion of that pension”\(^{143}\).

---

\(^{137}\) *Bachmann*, para. 23; *Commission v Belgium* (C-300/90), para. 16.

\(^{138}\) ECJ, 30 January 2007, Case C-150/04, *Commission v Denmark*, ECR I-1163 (on Articles 39, 43 and 49 EC); 5 July 2007, Case C-522/04, *Commission v Belgium*, (Articles 18, 39, 43 and 49 EC – employers’ contributions). Cf. in particular *Bachmann*, para. 27 and *Commission v Denmark* (C-150/04), paras. 72-74.

\(^{139}\) See Sec. 10(2) no 2 of ITA ; TNS Online, 9 May 1994.

\(^{142}\) ECJ, 9 November 2006, Case C-520/04, *Turpeinen*, ECR I-10685.

44. Although the taxation of pensions forms the major part of the case-law in this area, the Court has also issued judgements concerning the fiscal treatment of other social benefits, such as unemployment benefits, which involved a discrimination under Article 39 EC against frontier workers in respect of whether taxes on wages could be taken into consideration for the computation of unemployment benefits in *Merida*[^144], or in cases of maternity allowances in *Meindl*[^145].

Regarding the income tax regimes applicable to pensions, a rather reluctant attitude of the Member States can be particularly damaging to the effectiveness of EC law. It can hinder the cross-border payment of contributions to pension schemes provided for in other Member States. It can also constitute an obstacle to the cross-border payment of pensions as such. On this matter, the problems arising from the emigration of retired persons, such as double taxation or double non-taxation of pension benefits, remain numerous and difficult to tackle due to the lack of Community-wide coordination in this area, despite the critiques in the doctrine[^146] and the efforts made by the Commission[^147], or even by Member States on a bilateral basis[^148]. Today, many Member States still do not comply with the EC freedoms in that respect, a situation that motivated the Commission to initiate infringement procedures which have already led to compliance by Member States (Sweden) or to judgements stating the incompatibility of national legislation (Belgium and Denmark)[^149], while others are still pending (Germany)[^150]. Some countries comply, such as Finland[^151].

4. Income, losses and wealth from immovable property located in other Member States

45. A third category of cases deals with the taxation of cross-border situations involving immovable property, generally situated in a Member State which is different from the State in which the owner is assessed under the income tax[^152].

[^144]: ECJ, 16 September 2004, Case C-400/02, *Merida v Germany*, ECR I-8471.
[^149]: See *Commission v Denmark* (C-150/04). As a result of *Commission v Belgium* (C-522/04), Belgium modified in 2007 a provision, introduced in 1993 (just after Bachmann), amounting to an exit tax on the capital of a life insurance (Article 364bis CIR), by excluding from the scope of application of this provision the transfer of residence between Member States.
[^151]: As of 1st January 2006; see also the ruling of the Finnish Supreme Administrative Court, 25 May 2007, *TNS Online* 2 July 2007.
[^152]: Relevant cases involving the taxation of income from immovable property concern also company taxation (Case C-451/05, *Elisa*) and the taxation of non-profit organizations (Case C-386/04, *Stauffer*). On a Dutch tax on company transactions involving immovable property, see Case C-1/93, *Halliburton*. On the taxation of a person owning immovable property subsequently to a transfer of residence, see *Van Hilten-Van der Heijden* (no. 33 above, on the transfer of residence).
46. Even if the tax treatment of losses has been the object of a number of well known decisions in the area of corporate taxation, recent decisions of the Court have also dealt with this topic in relation to natural persons and with regard to their immovable property. In *Ritter-Coulais*, the Court held incompatible with the free movement of workers a German law which did not take into account rental income losses (“negative income”) relating to the use of a private dwelling in another Member State for the purposes of determining the rate of progressive taxation, whereas positive income deriving from the use of a dwelling situated in Germany was taken into account for that purpose.\(^{153}\) In *Lakebrink*, the Court confirmed its position in respect of a similar Luxembourg provision.\(^{154}\)

Since the tax treatment of losses from immovable property can be seen as one where “all the tax advantages connected with the non-resident’s ability to pay tax ... are not taken into account either in the State of residence or in the State of employment (…)” and “since the ability to pay tax may indeed be regarded as forming part of the personal situation of the non-resident ...”, *Lakebrink* and *Ritter-Coulais* are thus an application of the Schumacker doctrine.\(^{155}\)

In Luxembourg, a bill has been submitted to Parliament in order to consider global worldwide income (instead of worldwide professional income) to determine the tax rate applicable to local income, thus allowing some taking into consideration of foreign losses.\(^{156}\)

47. Another way of hindering the freedom of movement guaranteed by the EC Treaty is to subject tax incentives for the acquisition of immovable property to the condition that the acquired property be located in the Member State granting the incentive. In two infringement procedures against Portugal\(^{157}\) and Sweden\(^{158}\), the Court ruled that under Articles 18, 39 and 43 EC these Member States could not subject a deferral of taxation on capital gains arising from the sale of a property to the condition that the reinvestment in real property be made on the territory of that Member State, thus excluding real property reinvestments in other Member States.\(^{159}\)

---

\(^{154}\) ECJ, 18 July 2007, Case C-182/06, *Luxembourg v Lakebrink*, para. 26. However, whereas in Ritter-Coulais the national legislation disregarded only the negative income, in Lakebrink the Luxembourg legislation took neither the negative, nor the positive foreign income into account for tax purposes. The Court did not consider this difference relevant (see paras. 20, 24-25).

\(^{155}\) Lakebrink, para. 34. See also the Opinion of AG Léger in *Ritter-Coulais*, paras. 97-99. See also Pending Case C-527/06, *Renneberg v Staatssecretaris van Financien*, OJ C 56, 10.03.2007, p. 20.

\(^{156}\) Draft Bill 5801 of 6 November 2007, TNS Online, 14 November 2007.

\(^{157}\) ECJ, 26 October 2006, Case C-345/05, *Commission v Portugal*, ECR I-10633.

\(^{158}\) ECJ, 18 January 2007, Case C-104/06 *Commission v Sweden*, ECR I-671.

\(^{159}\) In both cases, the Court rejected justifications based on the coherence of the tax system, and on housing policy considerations (see *Commission v Portugal*, paras. 30-35, and *Commission v Sweden*, para. 27). On the justifications for the exclusion of foreign houses from the scope of such incentives, see the Opinion of AG Bot of 28 June 2007 in ECJ, 18 January 2008, Case C-152/05, *Commission v Germany*, paras. 83-94.
Sweden amended its national provision on the deferral of capital gains from immovable property even before the Court decided *Commission v. Sweden (C-104/06)*. The Commission also recently closed an infringement procedure against Belgium regarding a tax relief for owner-occupied and secondary residences limited to houses located in Belgium, which did not go beyond the stage of the reasoned opinion. A re-investment condition exists in Hungary, in Luxembourg; Poland abolished that condition as from 1st January 2007.

48. Similarly, EC law, in particular Article 56 EC, prohibits national measures which subject the taxation of capital gains arising from the sale of immovable property located in a Member State by non-residents in that State to a higher burden than the one which would be applicable to such capital gains had they been earned by a resident of that State (*Hollmann*).

49. Moreover, the Court has applied Article 56 EC to direct taxes on immovable property other than income tax, such as inheritance taxes, in the cases *Heirs of Barbier* and *Jäger* and wealth taxes, in *D.*. These levies can indeed cause potential restrictions to intra-Community investments. In *Heirs of Barbier*, the Court declared incompatible with the free movement of capital a Dutch law which restricted certain debts related to immovable property from being deducted for the computation of the taxable base for Dutch inheritance tax, when the deceased was a non-resident at the time of his death, whilst allowing it for residents. In *D.*, the Court held that Articles 56 and 58 CE could also apply to wealth taxes; however, in that particular case the Dutch legislation in question, which did not grant allowances to non-residents who owned less than 90% of their real estate wealth in the Netherlands, was found compatible with EC law under the Schumacker doctrine.

The Dutch tax authorities apply the *Barbier* doctrine.

5. Other income or expenses in relation to cross-border services

50. A final category of cases includes various situations in which a taxpayer receiving services from a provider established in another Member State suffers a tax disadvantage in comparison with the situation in which the provider of the service would be established in the same Member State as the recipient. These disadvantages can concern either the taxability of certain sources of income or the deductibility of specific expenses.

---

160 Wiman, B., “Pending cases involving Sweden”, in Lang/Schuch/ Staringer (ed.), *ECJ-Recent developments in Direct Taxation 2007*, Vienna, Linde, 2007, p. 231-233. The Swedish law on taxation of income was modified in December 2006, thus before the judgement. However, according to the Commission, “the amended rules do not fully eliminate the restriction on the free movement of persons as stated by the Court in its judgement (...),” and a new infringement procedure has been opened (Commission Press Release IP/07/1162 of 24 July 2007).

162 No difference is made according to the place of re-investment in a permanent home for the sellor (IBFD – Europe – Individual Taxation database – Hungary, point 2.4.1.

163 See art. 102bis LIR.

164 IBFD – Europe – Individual Taxation database – Poland, point 2.4.

165 ECJ, 11 October 2007, Case C-443/06, *Hollmann v Fazenda pública*.

169 The *D.* case is particularly relevant as to DTCs, since the Court refused to consider that the EC freedoms could work out as a most favoured nation clause.

51. An example of the first type of disadvantage is found in *Lindman*\(^{171}\). The Court held that legislation exempting from the calculation of taxable income winnings from Finnish lotteries but not winnings from lotteries established in other Member States was not compatible with the free provision of services\(^{172}\). Likewise, the Court ruled in *Commission v France*\(^{173}\) that France could not subject certain proceeds from investment and life assurance contracts taken out with resident companies (subject to a fixed levy) to a more favourable tax treatment than proceeds derived from contracts taken out with companies established in other Member States (included in worldwide income taxable at a progressive rate). Such a difference was found incompatible with Articles 49 and 56 EC\(^{174}\).

52. As to the deductibility of foreign expenses, the cases *Commission v Germany*\(^{175}\) and *Schwarz*\(^{176}\) both concern school fees paid by parents to private establishments for the education of their children. The Court considered that Germany could not authorize the partial deduction, on certain conditions, of those fees when paid to private schools established on German soil, while refusing it in all cases in respect of fees paid to similar establishment located in other Member States. The German legislation was therefore found to be incompatible with Articles 18, 39, 43 and 49 EC\(^{177}\).

The freedom to provide services also applies, correspondingly, to the “provider” of educational services, i.e. the teacher. In the *Jundt* case, a German lawyer, teaching on a secondary basis in a French university, from which he received expense allowances, successfully challenged German legislation exempting such allowances only when received from a national (German) public university\(^{178}\).

**B. TAXATION OF COMPANIES**

53. Starting with the early *Avoir fiscal* case, the majority of the judgements issued by the Court as to company taxation concern direct tax provisions which hinder the freedom of establishment\(^{179}\). Other cases address the freedom to provide services. A specific section focuses on the much-debated question of the application of EC freedoms to national mechanisms for compensation of cross-border losses and consolidation. The corporate tax aspects of the Court’s case-law on the taxation of dividends and interests, and the application of the free movement of capital and payments in this respect are analysed in C section devoted to the taxation of company shareholders.

\(^{172}\) An infringement procedure has been initiated against Spain for the same type of provision (see Commission Press Release IP/07/1030 of 6 July 2007) and a reasoned opinion was sent to Poland (Commission Press Release IP/06/1360 of 12 October 2006).

\(^{174}\) See also ECJ, 14 November 1995, Case C-484/93, *Svensson and Gustavsson v Ministre du Logement et de l'Urbanisme*, ECR I-3955. In this case the Court declared incompatible with the free movement of capital and the freedom to provide services a French measure granting an interest rate subsidy on building loans restricted to loans by credit institutions approved by France.

\(^{175}\) ECJ, 11 September 2007, Case C-318/05, *Commission v Germany*.

\(^{176}\) ECJ, 11 September 2007, Case C-76/05, *Schwarz and Gootjes-Schwarz v Finanzamt Bergisch Gladbach*.

\(^{177}\) See *Schwarz*, para. 33.

\(^{178}\) ECJ, 18 December 2007, Case C-281/06, *Jundt v Finanzamt Offenburg*.

1. Freedom to choose the form of establishment in other Member States

54. According to Articles 43 and 48 EC, as interpreted by the Court, the freedom of establishment includes the freedom to choose the appropriate legal form in which an economic operator established in a Member State wishes to pursue activities in another Member State. Discriminations or restrictions\textsuperscript{180} which can only arise when two “objectively comparable” situations receive a different tax treatment\textsuperscript{181} can be found in the corporate income tax systems of the Member State, but can also concern other types of taxes imposed on companies, as \textit{Halliburton}\textsuperscript{182} demonstrates. In this case, an exemption from the Dutch tax on transactions between companies relating to immovable property was considered to be contrary to Article 43 EC insofar as it did not apply when the transferring company was incorporated under the law of another Member State.

55. A distinction can be drawn between, on the one hand, rulings concerning national tax measures of the State of the secondary establishment of a non-resident company (the Host State) and, on the other hand, cases which deal with tax measures adopted by the Member State where a company has its primary establishment (the Home State) that hinder the establishment of subsidiaries or branches in another Member State.

The EC Treaty generally requires Member States not to discriminate branches of non-resident companies against domestic companies, provided that they are in comparable situations. Concerning the implementation of this principle into national law, Member States directly involved in the Court rulings tend to take compliance measures, but the same cannot always be said from Member States having a similar legislation. Despite the Court’s case-law, corporate tax systems of the Member States still contain numerous provisions that could be in breach with EC law\textsuperscript{183}.

a) In the Host State

56. In the Host State, the establishment of a non-resident EU company can be effected through the creation of permanent establishments (i.e. branches) or subsidiaries. Contrary to a subsidiary, a branch, although it may constitute an economic entity separate from the head office of the company, is not endowed with a distinct legal personality, but is part of the legal entity identified as the company\textsuperscript{184}. With regard to branches, EC law requires – in respect of certain tax benefits – that the Host State treat a branch of a non-resident company in the same way as it would treat the branch of a domestic company. Concerning subsidiaries, the Host State must treat equally subsidiaries of non-resident parent companies and those of resident parent companies.

\textsuperscript{180} Avoir fiscal para. 22; ECJ 23 February 2006, Case C-253/03 CLT-UFA, ECR I-1831, para. 14; ECJ 18 July 2007, Case C-231/05, Oy A.A, para. 40.

\textsuperscript{182} ECJ, 12 April 1994 Case C-1/93, \textit{Halliburton Services v Staatssecretaris van Financiën}, ECR I-1137.

\textsuperscript{183} In 2004, a Price Waterhouse Coopers study concluded that possible violations of EC freedoms existed in all (then 25) Members States. See Press Release, PWC LLP, 14 October 2004 (available on www.ukmediacentre.pwc.com).

\textsuperscript{184} For the purpose of the study, the terms permanent establishment, a tax treaty term, and branch, a company law term, are used synonymously.
i) Tax treatment of permanent establishments of EU companies

57. In Avoir fiscal\(^\text{185}\) (1986), the first decision in the field of direct taxation, the system of shareholder tax credit was held to be in breach of Article 43 EC, insofar as it was only available to French resident companies but not to French branches and agencies of companies established in other Member States. Although this case primarily deals with a tax mechanism aiming at limiting the economic double taxation of dividends in the hands of the shareholders, it displays, however, a good example of discrimination of branches of non-resident companies.

58. In the Royal Bank of Scotland case\(^\text{186}\), Greece applied to profits earned by a branch of a non-resident company a tax rate higher than the rate applicable to profits earned by a resident company. The Court considered that this difference could not be justified by objective differences between resident and non-resident companies, even though these two categories of taxpayers are generally not comparable as to the extent of their tax liability (worldwide income v domestic source income)\(^\text{187}\). In CLT-UFA, the Court condemned under Article 43 EC German legislation subjecting the profits of a branch of a non-resident EU company to a higher tax rate than the one that would have applied if this company had chosen to establish a German subsidiary distributing its profits in full to its parent company\(^\text{188}\).

Greece amended the provision struck down in Royal Bank of Scotland in such a way that now both resident and non-resident banks are taxed under the higher tax rate\(^\text{189}\). However, in the comparable CLT-UFA case regarding Germany, the German Bundesfinanzhof decided in reaction to the ECJ judgement that profits earned by a non-resident company through a permanent establishment have to be taxed like the wholly distributed profits of a comparable resident subsidiary (“distribution fiction”), which meant the lower of the two tax rates\(^\text{190}\).

59. Furthermore, to ensure freedom of establishment, a Member State must treat equally branches of non-resident companies and resident companies with regard to tax exemptions. The fact that a tax exemption is granted even by virtue of a DTC concluded with a third state outside the EU does not relieve the State from this obligation. In Saint-Gobain\(^\text{191}\), a tax relief provided by the DTC concluded between Germany and the United States was partly denied by Germany to a German branch of a French company, on the ground that the DTC applied only to companies subject to unlimited tax liability in Germany. This practice was held to be incompatible with the right of establishment.

\(^{185}\) Case 270/83, Avoir fiscal (see fn 179).

\(^{186}\) ECJ, 29 April 1999, Case C-311/97, Royal Bank of Scotland, ECR I-2651.

\(^{187}\) Royal Bank of Scotland, paras. 27-29. The Court refers to its case-law relating to the taxation of income of natural persons in Schumacker and Wielockx. Greece complied as of 1 January 1996, replacing the dual rate system with a single 40% rate (TNS Online, 31 May 1999).

\(^{188}\) ECJ, 23 February 2006, Case C-253/03, CLT-UFA v Finanzamt Köln-West, ECR I-1831.

\(^{189}\) See Ernst & Young, EuGH-Rechtsprechung Ertragsteuerrecht, Stollfuß, 2\(^{nd}\) edition, 2007, p. 181.

\(^{190}\) The German Ministry of Finance declared the principles of this decision applicable for all open cases in years where the tax credit method was applicable, that is to say until 2001. See BMF-Schreiben of 14 September 2007 (IV B 7 - S 2800/07/0001) “Steuersatz für Gewinne EU/EWR-ausländischer Kapitalgesellschaften nach dem Körperschaftsteuer-Anrechnungsverfahren; Folgen aus der EuGH-Entscheidung in Sachen “CLT-UFA””.

\(^{191}\) ECJ 14 September 1999, Case C-307/97, Saint-Gobain v Finanzamt Aachen-Innenstadt, ECR I-6163.
Even before the Court delivered its judgement, the German tax legislator extended treaty relief provisions embodied in DTCs to non-resident taxpayers. Following that landmark decision, most Member States also extended their DTCs, usually restricted to residents on their territory, to EU non-residents operating through permanent establishments.

60. Discrimination may also be found in procedural rules. In *Commerzbank*, the Court had to examine UK legislation under which interest on a repayment of overpaid tax was granted to companies with “fiscal residence” in that Member State but was refused to non-resident companies. The Court ruled that the “fiscal residence” criterion, even if it were applied without discrimination on the ground of the location of a company’s seat, would most likely work more particularly to the disadvantage of companies having their seat in other Member States, and held that difference to be discriminatory.

Following the judgement, the UK amended the Income and Corporation Taxes Act 1988 in order to entitle non-residents to receive interest on overpaid tax with effect from 1st October 1993.

61. In most of the above-mentioned cases, the Member State involved tried to justify the disputed tax provisions by referring, for example, to advantages that could balance the disadvantages resulting from the questionable provision, the absence of harmonization of tax law on a Community level, the risk of tax avoidance, the existence of double tax treaties or the objective differences between branches and subsidiaries. However, the Court did not accept any of these grounds of justification. The *Futura Participations and Singer* case concerning the tax treatment of cross-border losses incurred by a branch is an exception in this respect. The Court found that a system subjecting the carry-forward of losses of branches of non-resident companies to the condition that those losses be economically linked with the income earned in that Member State was in conformity with the fiscal principle of territoriality and thus did not entail discrimination. It also upheld the requirement for accounts to be held in the Host State, even though such requirement only applied if a carry-over of losses was claimed.

The Luxembourg tax legislator, whose legislation was at stake in this case, eased the restrictive provisions in order to admit non-residents to prove eligibility for the loss-carry-forward with other means. However, restrictive bookkeeping provisions continue to exist in other Member States, like, for example, in Germany.

---

193 For example, Austria complied. See Kofler, G., ‘Austria’ in Brokelind (2007), p. 59, 80. This does not require that Member States renegotiate their entire DTC network, nor that they adopt a specific provision, or even a circular; the Netherlands issued a Decree IFZ2003/558M of 21 January 2004 (TNS Online, 5 February 2004); for Ireland, see the Finance Bill 2001 of 30 March 2001 (TNS Online 23 May 2001).
ii) Tax treatment of subsidiaries of EU companies

62. Subsidiaries have an independent legal personality and are therefore always "nationals" or residents of the Host Member State. However, subsidiaries of non-resident EU parent companies are sometimes treated differently from subsidiaries of domestic parent companies. This situation has been considered to be incompatible with the EC Treaty freedoms in a number of cases.

63. The Baxter case\textsuperscript{200} concerned French legislation which did not allow the deduction of expenditure for scientific and technical research carried out outside of France (and therefore in other Member States). In the Court’s view, French undertakings will generally carry out research activities in France, whilst undertakings based in other Member States and operating in France through a secondary place of business such as a subsidiary will not, so that this deduction system operates to the detriment of French subsidiaries of foreign companies\textsuperscript{201}. This unequal treatment cannot be justified by the need for effectiveness of fiscal supervision\textsuperscript{202}.

Shortly after the outcome of the judgement, France adapted its legislation on the deductibility of research expenses, so that it is no longer linked to the fact that research has been carried out in France\textsuperscript{203}. At present, Ireland is confronted with a reasoned opinion of the Commission requesting the country to change similar provisions by which patent royalties are tax exempt only if research leading to the patent was carried out in Ireland\textsuperscript{204}.

64. The denial of group taxation benefits in connection with subsidiaries of non-resident EU parent companies can also entail incompatibilities with the freedom of establishment, as the Court stated in respect to UK legislation on advance corporation tax due upon the distribution of dividends (ACT) in the cases Metallgesellschaft/Hoechst\textsuperscript{205} (no. 114) and Franked Investment Income (FII) Group Litigation\textsuperscript{206} (no. 106).

65. Unjustified differences of treatment between subsidiaries can also occur in the application of anti-abuse provisions, such as thin capitalisation rules (see in particular cases Lankhorst-Hohorst\textsuperscript{207} (no. 95) and Test Claimants in the Thin Cap Group Litigation\textsuperscript{208} (no. 96). Other unjustified differences of treatment have been the object of the Court's rulings in the field of intra-group dividends and intra-group payments (see nos. 106 et seq.).

66. In contrast, the Court in Oy AA\textsuperscript{209} upheld a Finnish law allowing a Finnish subsidiary to make a tax deductible financial transfer to a Finnish parent but not to its non-resident EU parent. The Court admitted a combination of two factors, namely the safeguarding of a balanced allocation of powers of taxation between Member States and the need to prevent tax evasion.

\textsuperscript{200} ECJ, 8 July 1999, Case C-254/97, Baxter, ECR I-4811.
\textsuperscript{201} Baxter, para. 12.
\textsuperscript{202} Baxter, paras. 18, 19.
\textsuperscript{206} ECJ 12 December 2006, Case C-446/04, Test Claimants in the FII Group Litigation v Commissioners of Inland Revenue, ECR I-11753.
\textsuperscript{207} ECJ, 12 December 2002, Case C-324/00, Lankhorst-Hohorst, ECR I-11779.
\textsuperscript{208} Case C-524/04, Test Claimants in the Thin Cap Group Litigation (fn 45).
\textsuperscript{209} Oy AA, ECJ, 18 July 2007, Case C-231/05, Oy AA.
The Court considered that allowing a transferor to deduct an intra-group cross-border transfer from its taxable income would result in enabling groups of companies to choose the Member State in which the profits of the subsidiary were to be taxed. That would undermine the system created by a balanced allocation of taxing powers between Member States because the Member State of the subsidiary’s residence, according to the choice of the group of companies concerned, would be forced to renounce its right to tax the profits of that group's subsidiary to the benefit of the Member State of the parent company’s residence. Moreover, according to the Court, the possibility of transferring the taxable income of a subsidiary to a non-resident parent company carries the risk that companies establish purely artificial arrangements in order that income transfers be made to parent companies established in those Member States which apply the lowest rates of taxation, or where the income in question would not be taxed at all.

b) In the State of residence

67. The freedom of establishment does not only restrict the tax competence of the Host State. Since Daily Mail it has become clear that EC law also prohibits the Member State of residence from hindering the establishment of a company incorporated under its legislation in another Member State. Most of the cases concern the establishment of foreign subsidiaries and are often linked to group schemes and the deduction of foreign losses or expenses.

d) Tax treatment of permanent establishments in other Member States

68. Only one judgement addresses the domestic regime of a foreign branch: the AMID case (no. 84) concerns the setting-off of losses incurred by a Belgian company against the profits earned by its Luxembourg branch. This set-off economically subjected the Luxembourg profits to tax in Belgium, which was held discriminatory. Various pending cases also deal with the problems of deduction of losses by permanent establishments (nos. 86 et seq.).

69. Another pending case deserves particular attention as regards the determination of the Member State competent to avoid an undue restriction following from the combined application of the legislations of two Member States. In Deutsche Shell a German resident company allotted capital to its permanent establishment in Italy. The allotted capital was shown both in the Italian balance sheet and in the German head office’s balance sheet in their respective national currencies (LIT and DM). When the permanent establishment was wound up and the allotted capital was repatriated back to Germany, the exchange rate had fallen and the German company suffered a substantial currency loss. This loss, however, was tax-deductible neither in Germany nor in Italy. According to the Court, which finally concludes to the existence of an unjustified restrictive effect, “although it is true that any Member State which has concluded a double taxation convention must implement it by applying its own tax law and thereby calculate the income attributable to a permanent establishment, it is unacceptable for a Member State to exclude from the basis of assessment of the principal establishment currency losses which, by their nature, can never be suffered by the permanent establishment”.

213 Daily Mail, para. 16. See also ICI, para. 21, and ECJ, 13 December 2005, Case C-446/03, Marks & Spencer, ECR I-10837 para. 31.
214 ECJ, 14 December 2000, Case C-141/99, AMID v Belgische Staat, ECR I-11619. See no. 34.
215 ECJ, 28 February 2008, Case C-293/06 Deutsche Shell v Finanzamt für Grossunternehmen in Hamburg.
216 Deutsche Shell, para. 44.
ii) Tax treatment of subsidiaries established in other Member States

70. The Court of Justice has issued various rulings on the taxation of multi-national groups of companies. Some of these cases, such as *ICI*<sup>217</sup>, *Marks and Spencer*<sup>218</sup> *Rewe Zentralfinanz*<sup>219</sup>, and the pending *Lidl Belgium*<sup>220</sup>, refer to the deductibility of foreign losses, and are discussed in nos. 86 *et seq.*

71. Other cases concern the fiscal treatment of intra-group transactions. In the case *X AB and Y AB*<sup>221</sup>, a Swedish group scheme according to which assets could be transferred tax-free between companies belonging to the same group was considered to be contrary to the freedom of establishment, since it did not apply to certain cross-border situations. (See also X and Y no. 94).

72. The Court found furthermore unjustified differences between parent companies on the basis of the State of residence of their subsidiaries in *Bosal*<sup>222</sup> and in *Keller Holding*<sup>223</sup> as to the deductibility of holding and financing costs (see nos. 124 *et seq.*).

73. Anti-abuse rules may also conflict with the freedom of establishment. *Cadbury Schweppes*<sup>224</sup> concerned UK Controlled Foreign Company (CFC) legislation which commended the inclusion in the tax base of a resident company of the profits made by a CFC in a lower tax State. The Court found that companies with a CFC in low-taxation Member States were treated less favourably than resident companies with subsidiaries in the UK or in a Member State which does not apply a lower level of taxation than in the UK<sup>225</sup>. The UK CFC legislation was considered contrary to the freedom of establishment. Nevertheless, it was found to be justified if applied only to wholly artificial arrangements aimed at circumventing the application of the legislation of the Member State concerned.

74. However, the Court considered in *Columbus Container*<sup>226</sup> that CFC legislation does not contravene the freedom of movement when it does not submit to an additional tax burden the economic operator having cross-border activities, as compared to a person operating in a purely national context.

<sup>217</sup> Case C-264/96, *ICI*, fn 67, esp. para. 28.

<sup>218</sup> Case C-446/03, *Marks & Spencer*, fn 213.

<sup>219</sup> ECJ, 29 March 2007, Case C-347/04, *Rewe Zentralfinanz v Finanzamt Köln-Mitte*.

<sup>221</sup> ECJ, 18 November 1999, Case C-200/98 *X AB, Y AB*, ECR 1-8264.

<sup>222</sup> ECJ, 18 September 2003, Case C-168/01, *Bosal Holding*, ECR 1-9401.

<sup>223</sup> ECJ, 23 February 2006, Case C-471/04, *Keller Holding*, ECR 1-2107.

<sup>224</sup> ECJ, 12 September 2006, Case C-196/04, *Cadbury Schweppes*, ECR 1-7995.

<sup>225</sup> *Cadbury Schweppes*, para. 44.

<sup>226</sup> ECJ, 6 December 2007, *Columbus Container v Finanzamt Bielefeld-Innenstadt*. This case concerned a German mechanism providing a switch from the exemption to the credit method in the case of a significantly lower taxation in the State of source.
UK CFC rules were amended with immediate effect as of December 6, 2006: any apportionment of the chargeable profits of a CFC located in a Member State will be reduced by the amount that relates to the “net economic value”, which arises directly to the group in consequence of the activities of employees working for the CFC in that EU territory. Profits of “genuine economic activities” are however excluded from the amount that relates to the “net economic value” and may therefore be subject of a CFC apportionment. These new more complicated CFC rules might be considered as contravening European law. However, the UK Government already announced its intention to overhaul the regime relating to foreign profits and released a discussion document. The new controlled companies (CC) rules should apply to domestic and cross-border situations in order to remove any element of discrimination. German CFC law has been even more restrictive than the UK provisions since it did not allow the taxpayer to demonstrate that the purpose of transaction was not the circumvention of German taxes. The respective provision has been amended with effect from 1st January 2008, so that add-back taxation does not apply, when the tax-payer can prove that the controlled company (resident in another EU or EEA Member State) carries on a “genuine economic activity”. Furthermore, it is necessary that Germany and the respective EU/EEA State concluded an agreement on the exchange of information. The new exception from the add-back taxation shall, however, not apply to the extent the controlled company derives income from other controlled companies or permanent establishments outside the EU/EEA, which might pose problems with regard to the free movement of services. Germany, Denmark and Sweden introduced draft law amending their current CFC legislation. France published lengthy guidelines.

In conclusion, it appears that the Court, when examining tax measures from the perspective of the Host State, requires that the treatment of branches of a non-national company and of subsidiaries of non-resident parent companies be determined as if they were related to resident companies. When the Court decides on measures taken by the Home State, it requires that foreign branches and subsidiaries are to be treated like domestic branches or subsidiaries.

2. Cross-border provision of services

a) In the State of activity

76. The case-law of the Court of Justice on Article 49 EC often addresses situations where companies are hindered in the provision of services in a Member State where they are not residents (“the State of activity”)\(^{237}\). Restrictions in the State of activity may be caused by withholding tax systems or by provisions limiting the deductibility of expenses, not only for individuals (See Gerritse, no. 39) but also for companies.

77. In Germany, non-residents are subject to withholding tax on income from work. It is the responsibility of the income provider, usually a company, to deduct the tax at source. Even if a tax treaty provides for a partial or total reduction in German tax, the tax must be withheld and is subsequently refunded. In Scorpio\(^{238}\) (no. 39) the Court decided that the obligation imposed on resident companies contracting with non-resident service providers to withhold tax only on payments to non-resident creditors and the consequent liability for this tax constituted an obstacle to Article 49 EC\(^{239}\). However, the obstacle was considered justified due to the necessity to secure the taxation of non-residents. Nevertheless, German legislation was considered to be in breach of EC law. It denied for the computation of the withholding by non-residents the right to claim deduction of business expenses that were directly economically linked to their German-sourced income, while permitting the immediate deduction of these expenses for residents\(^{240}\).

78. In Centro Equestre da Lezíria Grande\(^{241}\), the same condition of a direct economic link between the deduction of operating expenses and the income received in the Member State was considered to be compatible with EC law. In line with Gerritse, the Court stated that it was, however, contrary to the freedom to provide services to make the repayment of that tax subject to the condition that the operating expenses exceed half of that income\(^{242}\).

Germany did not implement properly the judgements in Scorpio and Centro Equestre. For that reason, the Commission addressed a Reasoned Opinion to the Federal Republic requesting an amendment of the questionable provisions which preclude an immediate deduction of expenses from the income for certain categories of non-residents\(^{243}\).

\(^{237}\) Danner, para. 29; C-433/04, Commission v Belgium, para. 28 with referral to previous judgements, among others 25 July 1991, Case C-76/90, Säger, ECR I-4221.

\(^{238}\) ECJ, 3 October 2006, Case C-290/04, Scorpio, ECR I-9461.

\(^{239}\) Scorpio, paras. 33-34.

\(^{240}\) Scorpio, para. 49. The Court also held that the requirement of an exemption certificate in order to benefit from a tax treaty zero rate in Germany causes extra administrative costs, which restrict the free movement of services. However, the restriction was held to be justified by the necessity to ensure the proper functioning of source taxation (see paras. 53-61).

\(^{241}\) ECJ, 15 February 2007 Case C- 345/04, Centro Equestre da Lezíria Grande v Bundesamt für Finanzen, ECR I-1425.

\(^{242}\) Following a letter of the Ministry of Finance implementing the Gerritse decision, the legislation in question was no longer applicable at the time of the judgement. The Court considered that this was not relevant for the purposes of assessing the compatibility of the situation of the taxpayer with EC law.

79. The Court of Justice confirmed that recourse to service providers established in other Member States could also be hindered by procedural tax rules. In *Commission v Belgium*, the Belgian law which subjected undertakings in the construction sector both to a withholding obligation on the payments they made to contractors who were neither established nor registered in Belgium and to a limited joint and several liability for their Belgian tax debts was considered a disproportionate infringement on the rights conferred upon them by Articles 49 and 50 EC.

80. However, the same obstacles can be seen from the perspective of the Member State of residence of the recipient of the service provided by the company, since Article 49 EC also protects the (passive) freedom to receive services. In the field of direct taxation, the recipient of a service may be denied a certain tax advantage when the service is rendered by a non-resident. Such discrimination in the State of activity, even if the recipient of the service concerned is an individual, has the effect of discouraging non-resident companies from offering their services in that Member State. In *Lindman*, no. 51, *Safir*, no. 42, *Danner*, no. 42, *Skandia/Ramstedt*, no. 42, *Schwarz/Gootjes-Schwarz*, no. 52 and *Case C-318/05 Commission v. Germany*, no. 52.

b) In the State of residence

81. In the State of residence, Article 49 EC also protects companies which receive services from providers established in other Member States and therefore precludes tax advantages from being limited to domestic services. *Eurowings* concerned the German Gewerbesteuer (trade tax) for which relief was only available if business assets had been leased from another undertaking subject to German trade tax, i.e. resident in Germany. Otherwise, the leasing costs were added back to the taxable income. In that way, German law established a difference depending on whether the provider of the service was established in Germany or in another Member State. The legislation was held to be contrary to the freedom to provide services. Similarly, in *Laboratoires Fournier*, the Court considered that the French legislation limiting the benefit of a tax credit for research expenses to research projects carried out in France was contrary to Article 49 EC, since it differentiated according to the place of establishment of the provider of services and was therefore liable to restrict cross-border activities.

---

244 ECJ, 9 November 2006, Case C-433/04, *Commission v Belgium*, ECR I-10653.
245 *Commission v Belgium*, paras. 31 to 41. Cp. with *Scorpio*, para. 36, which concerns a period when no Community instrument on administrative cooperation existed between Member States.
247 *Eurowings*, para. 44. In this case, the Court clarified that using the Internal market in order to profit from special tax regimes is not an abuse and cannot be used by another Member State to justify less favourable treatment in tax matters.
249 *Laboratoires Fournier*, paras. 16-18.
In France, the judgement has been implemented properly through legislative amendments\(^\text{250}\). On the contrary, Belgian law still subjects a specific profit exemption to the condition that the researcher is employed in Belgium\(^\text{251}\). In Finland, accelerated depreciation is granted only to certain investments in some developing regions\(^\text{252}\). Similar rules also exist in Germany. Ireland is confronted with a reasoned opinion of the Commission requesting it to change similar provisions by which patent royalties are tax exempt only if research leading to the patent was carried out in Ireland.\(^\text{253}\).

### 3. Consolidation and losses

#### 82. The question of cross-border loss compensation has raised difficult specific problems which are directly linked with the structure of the Member States’ tax systems. When companies own several places of business in the same country, all their profits and losses are aggregated in order to determine their taxable income. When places of business are located in different countries, difficulties arise when neither the State of residence nor the State of activity admits the deduction of losses.

#### a) Losses of EU companies with a permanent establishment in another Member State

83. How does the Court address the tax treatment of losses incurred by a company having a permanent establishment in another Member State?

**i) In the State of residence**

84. In \emph{AMID}\(^\text{254}\) was at issue the tax treatment of a loss incurred in the State of residence by a company which had a permanent establishment in another Member State, the profits of which were exempt according to a DTC. According to the worldwide income taxation principle, the company’s Belgian losses were set-off against the profits of its foreign permanent establishment, which were normally exempt according to the DTC. This compensation led economically to Belgian (double) taxation of the Luxembourg profits, since the Belgian loss could not be carried forward to be deducted from future Belgian income. The Court compared companies having all their branches in Belgium with companies with one or more foreign permanent establishments. The Court held that by setting off domestic losses against profits exempted by treaty, the legislation of that Member State establishes a differentiated tax treatment as between those two categories incompatible with EC law\(^\text{255}\).

Belgium has not yet modified its tax legislation. However, the tax authorities comply with the ruling, even though in a very narrow reading\(^\text{256}\).
85. A similar situation regarding an individual was solved in the same way\textsuperscript{257}. In \textit{Mertens}, the loss incurred by a Belgian resident in the exercise of his professional activities in Belgium had been set off against the profits from another professional activity in Germany, despite the fact that this profit was exempt from taxation in Belgium according to the DTC between the two countries. The Court pointed out “\textit{that the unfavourable tax treatment ... is the direct result of the application of the Belgian legislation, not of an inevitable disparity between the Belgian and German tax legislation}”\textsuperscript{258}. In the absence of justification, the Court ruled that the provisions in question contravened the free movement of persons.

86. The company’s Home State can also create an unfavourable tax treatment for losses incurred in the Host State of a permanent establishment. In \textit{Stahlwerk Ergste Westig}\textsuperscript{259}, a German company had two loss-making permanent establishments in the United States. Germany refused the deduction of the US losses from the profits taxable in Germany. The company claimed that this was contrary to the EC Treaty and especially to the free movement of capital. The Court, however, decided in an Order that such a situation involves the right of establishment which cannot be invoked in relations with third countries.

A similar question arises in the pending case \textit{Lidl Belgium}\textsuperscript{260}, which concerns a German company that has been denied the deduction of losses from a permanent establishment in Luxembourg on the grounds that, according to the Luxembourg-German DTC, income from such a permanent establishment is not subject to taxation in Germany. Moreover, in the pending case \textit{Krankenheim Ruhesitz}\textsuperscript{261}, the Court of Justice has to decide whether freedom of establishment allows a Home State to disallow the deduction of losses incurred by a foreign branch in a case where the loss cannot be effectively deducted in the other State.

\textsuperscript{257} ECJ, 12 September 2002, Case C-431/01, \textit{Mertens v Belgian State}.
\textsuperscript{258} \textit{Mertens}, para. 36.
\textsuperscript{259} ECJ, Order of 6 November 2007, Case C-415/06, \textit{Stahlwerk Ergste Westig v Finanzamt Düsseldorf-Mettmann}.
\textsuperscript{261} Reference for a preliminary ruling from the German Bundesfinanzhof lodged on 21 March 2007, \textit{Finanzamt für Körperschaften III in Berlin v Krankenheim Ruhesitz} (Case C-157/07), OJ C 129, 09.06.2007, p. 5.
The “Amid situation” can occur in worldwide tax systems, where, on the one hand, the globalisation of income leads to the setting-off of the domestic loss with foreign (exempt) income, with no carry-forward of the exempt income used for the compensation or, on the other hand, in tax credit systems when no carry-over or refund is provided for excess tax credit resulting from the global income being decreased by a domestic loss.

As regards tax credit systems, various countries comply with the AMID ruling: the Netherlands, where domestic losses are set-off against foreign profit, but with a carry-over of the amount of foreign profit that does not give right to relief262. However, a tax credit system with no refund or carry-over of excess tax credit applies in Slovenia, Spain, Portugal263 and the Czech Republic. A similar breach of EC Law might also occur under certain circumstances under the Irish264, French265, Finnish, Polish, Bulgarian, and Luxembourg systems266.

The “Amid situation” does not occur in those Member States where exemption means excluding from the tax base any foreign result, be it positive or negative. This is the case, for example, in Germany, Finland267, Poland268, and also in Denmark which recently partially abandoned its worldwide taxation principle with the consequence that a domestic loss cannot anymore be set-off against foreign permanent establishment profits. This was also the case in Luxembourg, until a domestic decision construed the Treaty exemption in a narrow sense269, allowing for compensation of foreign losses with domestic income; one must probably consider, in line with the Amid ruling, that no offsetting of domestic losses is allowed against foreign profits.

The restrictive concept of exemption leads to prevent setting-off foreign losses against head office profits. This situation is at present challenged by the Commission as regards Germany270.

**ii) In the Host State**

87. In *Futura Participations and Singer*271, the questions referred to the Court dealt with the treatment of losses in the Host State. Under Luxembourg tax legislation, the carry-forward of losses for branches of non-resident companies was subject to two conditions. First, the losses had to be economically linked to the income earned by the taxpayer in Luxembourg. Second, the taxpayer had to keep and hold accounts according to Luxembourg law.

---

262 Articles 31-33 of the Besluit Voorkoming Dubbele Belasting 2001. For a situation where a non-resident is refused the carry over of losses against income from another category, considered as non-discriminatory compared with resident situation, see: Hoge Raad, no. 43517, concl. P.G. of 7 December 2007, and Hoge Raad, 7 December 2007, no. 43258 deciding in the same way.

263 This country applies a “per country” tax credit system.

264 Recently, Ireland introduced a “pooling” system authorizing excess tax credit for one country to be credited against Irish tax on branch profits in other countries where foreign tax is not sufficient to cover the Irish tax (Section 826 and Schedule 24 9FA TCA 1997).

266 In non-DTC situations, the credit method applies.

267 This is only the case when the exemption is provided for by a DTC.

269 Tribunal Administratif Luxembourg, 19 April 2005, no. 17.820 confirmed by the Cour Administrative, 10 August 2005; see also in Austria a similar situation.

271 Case C- 250/95, *Futura Participations & Singer v Administration des contributions*, fn. 61.
Regarding the first condition, the Court ruled that a Member State does not encroach upon the freedom of establishment by insisting that there be an economic link between the losses to be carried forward and the income earned in the Member State in question: such a system is in conformity with the fiscal principle of territoriality and does not entail discrimination.\textsuperscript{272} However, with regard to the second condition, the Court considered that a Member State cannot oblige a non-resident taxpayer to keep accounts complying with national rules to justify the carry-forward of losses; it must allow that taxpayer other means for proving eligibility for the carry-forward.

**b) Intra-group losses and transfers (consolidation)**

88. Most countries restrict the setting-off of losses to the taxpayer who has incurred them\textsuperscript{273}. A change in the ownership or control of a company, or a restructuring (e.g. a merger) can thus restrict or eliminate the right to the deduction of such losses. Moreover, as a rule, a loss incurred by a company within a group cannot be set off against the profits of another company within the same group, whether or not it is established in the same country\textsuperscript{274}, except by application of specific tax provisions on group consolidation\textsuperscript{275}. Group taxation regimes generally apply only to resident subsidiaries, with some exceptions (i.e. Denmark, France and Italy), and a number of jurisdictions expand the scope of the regime to domestic permanent establishments of foreign corporations (e.g. Austria, Finland, Germany, Italy, Luxembourg, the Netherlands, Spain, Sweden and the UK)\textsuperscript{276}.

**i) Loss offset within EU multinational groups**

89. On the relation between the right to compensate losses within a group and the State of establishment of the subsidiaries, the Court has decided two cases, which both deal with the UK “group relief regime”.

90. **ICI** was the first case regarding loss offset between companies. Together with another UK company, ICI formed a consortium through which the two companies beneficially owned the shares of a holding company, the sole business of which was to hold shares in subsidiaries operating in many countries. One of those subsidiaries located in the UK incurred losses. ICI tried to set off its part in these losses against its chargeable profits for the corresponding periods by way of tax relief. The tax relief was denied on the basis that, under UK legislation, group relief could be refused to a UK group, as regards UK losses to be set off against UK profits, if a majority of the subsidiaries of the group were outside the UK, even if a number of them were within the EU. The Court of Justice held that such legislation constituted an unjustified inequality of treatment under the Treaty’s provisions on freedom of establishment and rejected all the justifications proposed by the UK\textsuperscript{277}.

\textsuperscript{272} Futura Participations and Singer, para. 22.
\textsuperscript{274} This is a fundamental difference between group structuring through subsidiaries compared to permanent establishments pertaining to a single legal entity. In this later case, as far as the [worldwide] taxation principle applies, all the profits and losses must be aggregated.
\textsuperscript{275} On the existing and possible systems of “consolidation”, see Masui, (2004).
\textsuperscript{276} “This is a new trend among European countries especially since 2000”. Masui, Y., (2004), pp. 53-54.
91. Academic commentators of the ICI decision have read it as implying that the losses of a subsidiary established in a Member State other than the one of the parent company must be taken into consideration within the framework of a consolidation regime.\(^{278}\) The Court of Justice dealt with this question in *Marks and Spencer*\(^{279}\). Marks and Spencer, incorporated in the UK, established a number of subsidiaries in the UK and in other Member States. In the UK, Marks & Spencer claimed group tax relief in respect of losses incurred by its subsidiaries in Belgium, France and Germany. That claim for relief was rejected on the ground that group relief could only be granted for losses recorded in the UK.

The Court of Justice considered that losses incurred by a resident subsidiary and losses incurred by a non-resident subsidiary were treated differently for tax purposes, which amounted to a restriction on the freedom of establishment. Nonetheless, according to the Court, such a restriction is generally compatible with the EC Treaty, since it pursues a legitimate objective and is justified by imperative reasons in the public interest.\(^{280}\) The Court recognized the need to preserve the allocation of the power to impose taxes between Member States so that it makes “it necessary to apply to the economic activities of companies established in one of those States only the tax rules of that State in respect of both profits and losses”. In this context, “to give companies the option to have their losses taken into account in the Member State in which they are established or in another Member State would significantly jeopardize a balanced allocation of the power to impose taxes between Member States, as the taxable basis would be increased in the first State and reduced in the second to the extent of the losses transferred”. The Court also held that Member States must be able to prevent a double deduction of losses, and acknowledged the need to minimize the risk of tax avoidance schemes whereby losses could be transferred to companies established in those Member States which apply the highest rates of taxation.\(^{281}\)

However, the Court held that in the case at hand the restrictive measure went beyond what was necessary to attain the objectives pursued, since the non-resident subsidiary had exhausted all possibilities in its Home State to deduct or carry forward its losses.\(^{282}\)

92. As a result of the Court's case-law, a Member State cannot limit the group relief for losses incurred on its territory by a resident company which is a member of a group, simply because that company has subsidiaries in other Member States. Moreover, insofar as the loss cannot be carried over in the Home State of the subsidiary, the Home State of the parent company, when it grants a group relief regime, must allow that foreign loss to be set off against profits realized on its territory.

\(^{279}\) ECJ (Grand Chamber), 13 December 2005, Case C-446/03, *Marks & Spencer*, *ECR* I-10837.

\(^{280}\) *Marks & Spencer*, para. 51.

\(^{281}\) *Marks & Spencer*, paras. 45-49. It is worth noting that these three justifications are accepted together by the Court, which is innovative as the Court usually considers justifications separately.

\(^{282}\) *Marks & Spencer*, paras. 54-56. Cf. also AG Poiares Maduro, paras. 49, 82.
The ICI decision obliged the UK to grant its group tax relief also when the UK group has subsidiaries in other EU Member States. The UK also had to modify its legislation following the Marks and Spencer decision in order to allow loss relief to parent companies for the losses of subsidiaries established in another Member State, when those losses were unrelievable in that Member State. It is questionable whether the requirement that “every step... is taken” to secure that the loss is taken into account (abroad) and the requirement that “the time at which the determination is to be made is the time immediately after the end of the current period”, which in practice reduces considerably possibilities of setting-off, are in line with the Court ruling and with the principle of effective remedy that must be afforded to claimants.

As to the other Member States, there is no uniformity in the tax treatment of intra-group losses in the EU. Some Member States apply a consolidation regime that allows the set-off of losses from foreign EU subsidiaries. For example, the Austrian group regime, applicable since 2005, allows the deduction of losses from foreign subsidiaries for the year in which they are incurred. However, this regime is limited to first-level subsidiaries and does not allow setting-off losses of foreign sub-subsidiaries. Furthermore, recapture is provided when the foreign subsidiary is liquidated.

Latvia broadened its tax group relief regime to include foreign subsidiaries located in an EEA country and permanent establishments; a “no possibility” test has also been introduced which probably will give rise to practical difficulties or claims. In Slovenia, the group regime introduced in 2005 which in groups could only be formed by two resident companies has been abrogated as from 1st January 2007. Cyprus grants loss offsetting only to resident companies and to permanent establishments of non-resident companies that elect the resident companies treatment.

---

283 New Section 403F ICTA 1988 and new Schedule 18A, ICTA 1988 introduced via para. 4 of Sched. 1 Finance Act 2006 and para. 7 of Sched. 1 Finance Act 2006. The UK Government estimates the Exchequer’s cost at £ 50 m a year, which it considers sustainable so that it does not consider the option to abolish the group relief. See Regulatory Impact Assessment of 8 March 2006 for Corporation Tax – Extension of Group Relief published on the homepage of HM Revenue & Customs http://www.hmrc.gov.uk/.

284 The Institute of Chartered Accountants in England & Wales has already sent its comments to the EU Commission on this issue. On some still open points following the ECJ ruling, see: Court of Appeal (UK), 20 February 2007.

285 Sec. 2 Abs 8 Einkommensteuergesetz (German Income Tax Code). With a recapture mechanism.

286 Under these two points the Austrian regime seems to be incompatible with EC law, see Stefaner, M.C., “Implication of Marks & Spencer on Austria’s Group Tax Regime”, TNI, January 23, 2006, p. 275-276. The author also points out a difference between domestic and foreign subsidiaries as to the shareholding requirement.

288 New CITA rule introduced in 2005 (TNS Online, 13 June 2005).
The Danish\textsuperscript{289} and the Italian\textsuperscript{290} consolidation regimes also seem to be in line with the Marks and Spencer decision. In France, although the consolidation regime\textsuperscript{291} is normally limited to French resident companies and French permanent establishments of foreign companies, the “consolidated income regime” granted upon ministerial approval\textsuperscript{292} allows setting-off losses from foreign subsidiaries and foreign permanent establishments. Some aspects of this regime might be contrary to EC law as interpreted by the Court in Marks and Spencer\textsuperscript{293}. Ireland also made amendments to enact Marks and Spencer\textsuperscript{294}. Other Member States do not allow the set-off of losses from foreign subsidiaries. For instance, the “integration regime” in Luxembourg is optional and allows concerned companies to group or set-off their tax results during the period for which the regime applies. It only deals with entities (companies and permanent establishments) which are taxable in Luxembourg\textsuperscript{295}. Thus, no compensation of losses from foreign subsidiaries is allowed while such setting off exists as regards domestic subsidiaries\textsuperscript{296}. Furthermore, the Luxembourg \textit{Cour Administrative} recently considered that the limitation of the integration regime to groups having their parent company or a permanent establishment in Luxembourg, while refusing the regime in the case of a non-resident EU parent company with no permanent establishment in Luxembourg, was in accordance with the non-discrimination clause in DTCs; the Court refused to refer the case to the Court of Justice on the basis of the freedom of establishment\textsuperscript{297}.

\textsuperscript{289} Denmark modified considerably its consolidation regime in 2004. A mandatory “local tax consolidation” applies to all group-related resident companies and Danish branches of non-resident companies. Cross-border consolidation remains optional, on an “all or none principle”, whereby all or none of the foreign entities are included in the consolidation. Losses from an entity are set-off against profits of the others, the result of each entity being determined separately. The “all or none” principle aims at avoiding inclusion in the consolidation of loss-making companies only. Permanent establishments are included in the consolidation in order to prevent companies from setting-up permanent establishments rather than subsidiaries abroad. The decision to form a cross-border tax consolidation group is binding for a ten years period. A recapture exists in case of early dissolution of the group or at the termination of consolidation.

\textsuperscript{290} In Italy, the consolidation regime is available to resident companies, including the Italian permanent establishment of a foreign company acting as the controlling company. A similar regime applies to foreign group companies, on an “all or none” basis, Article 117 et seq. TUIR.

\textsuperscript{291} Articles 223 A to 223Q of the French Income Tax Code (CGI).

\textsuperscript{292} Articles 203(5) CGI and Ann. II, art. 103-123 CGI.

\textsuperscript{294} See new Section 411 and Section 420C TCA and Guidance notes from Irish Revenue: Section 420C Notes for Guidance TCA 1997. In force as from 1\textsuperscript{st} Jan. 2006.

\textsuperscript{295} This is also the case in Austria, and could be challenged under EU law: see Stefaner, M.C. (2006).

\textsuperscript{296} Article 164bis LIR ; Circ. LIR no. 164bis/1 dated September 27, 2004.

\textsuperscript{297} Cour Administrative Luxembourg, 19 April 2007, no. 21979C.
Under the German Organschaft regime, parents and subsidiaries must be German resident companies. They can conclude for a minimum period of five years298 a “profit and loss pooling agreement” whereby the controlling parent covers the losses of the controlled company. In the same way, the Dutch “fiscal unity regime”299 is limited to resident companies. Dutch AG Wattel is of the opinion that a referral has to be made to the Court300. The Portuguese tax relief regime is also limited to resident companies; no change has been made since Marks and Spencer301. Similarly, Finland restricts its group contribution regime to resident companies. Interestingly, in the Oy AA case (discussed above no. 66), the Court ruled that Article 43 EC does not preclude a regime whereby an intra-group financial transfer from a subsidiary in favour of a parent company is restricted to resident companies. The Finnish regime was thus considered compatible with EU law on this aspect302. In a situation similar to Marks and Spencer, the Finnish Supreme Administrative Court recently refused the deduction of a contribution by a Finnish subsidiary of a Finnish parent company to its UK sister company as regards what could be considered as “final” losses. The Court seems to rely on the Oy AA case to deny deductibility for the reason that losses were final303. It could be wondered what the Court would have decided in a situation where a Finnish parent would claim the deduction of a contribution to a finally insolvent foreign subsidiary (Marks and Spencer situation).

Finally, the legislation of the Member States that did not adopt any consolidation regime, like for example, Belgium, Hungary, the Czech Republic, Estonia, are – maybe paradoxically, since less “company-friendly” – fully EU compatible on this aspect. Such a consideration can explain why Slovenia chose to abolish its consolidation regime: it did not want to face uncertainty regarding tax revenues in the event of an extension of this regime to foreign companies304.

**ii) Deduction of losses from intra-group participations**

**93.** A further question is whether a parent company which is allowed to deduct from its tax base in its State of residence the loss incurred on the shares of a subsidiary located in the same State should be allowed to do it in respect of shares in a subsidiary located in another Member State.

This question mainly deals with the concept of taxable income (i.e. what is included or excluded from taxation), since a subsidiary is usually allowed to carry over its losses against its profits in its State of residence.

---

298 Anticipated termination of the agreement leads to retroactive cancellation of the group regime.
299 Art. 13c, 13d and 15 Dutch Law on Corporate Tax.
300 Hoge Raad (NL), Opinion A.G Wattel. Of 4 July 2007 in the case BB3444, CPG 43484 (see website). See also, i.e. Rechtbank Arnhem, 7 July 2006, no. 05/4260 rejecting the taxpayer’s claim that the fiscal unity regime was not in line with EU freedoms.
301 Art. 63-66 CIRC.
302 Finnish Supreme Administrative Court, 31 December 2007, SAC 2007:93: the Court follows the ECJ’s judgement.
In *Rewe Zentralfinanz*\(^{305}\), the Court considered that the denial of the deductibility – in the State of the parent company – of write-downs on shares of a subsidiary located in another Member State, while such deductibility was granted in the case of the shares of a domestic (German) subsidiary, constituted a restriction of the freedom of establishment\(^{306}\). Several justificatory arguments were rejected by the Court. In particular, in response to the argument based on the “rule of symmetry” between the right to tax the profits of a company and the obligation to take into account the losses incurred by that company, the Court held that “... *a difference in tax treatment between resident parent companies according to whether or not they have subsidiaries abroad cannot be justified merely by the fact that they have decided to carry on economic activities in another Member State, in which the State concerned cannot exercise its taxing powers ...*”\(^{307}\). The Court rejected an analogy with Marks and Spencer, since “[s]uch a separate treatment of, first, the losses suffered by the subsidiaries themselves and, secondly, the losses incurred by the parent company cannot, on any basis, amount to using the same losses twice”\(^{308}\).

Under German tax law in force since 1 January 2001, write-downs are no longer permitted irrespective of whether they concern internal or cross-border participations. However, the Court’s decision may still have an impact for individual taxpayers (since similar rules are still applicable in Germany for individuals) to the extent that individuals own the shares as part of their “business property” for German income tax purposes. In this respect, a potential restriction of the freedom of establishment or (possibly) the free movement of capital may effectively arise depending on whether or not the shareholding confers a definite influence over the company’s decisions and allows the shareholders to determine its activities\(^{309}\).

### iii) Intra-group transfers

94. Restrictions may also arise in relation to the tax treatment of intra-group transfers of assets\(^{310}\). In *X and Y*\(^{311}\), a case involving the Swedish intra-group transfer scheme, the Court considered that the deferral of tax due on capital gains arising from the transfer of assets at “undervalue” (i.e. below market value) without consideration to a Swedish company in which the transferor directly or indirectly held shares could not be refused when the transferee was a foreign company or a Swedish company held by a foreign company in which the Swedish transferor himself has a holding. The risk of tax evasion – by a transfer to a foreign or foreign-held company and a move of the transferor abroad – could not be inferred from the mere transfer. In any event, this risk existed also in respect of transfers to a Swedish company.

\(^{306}\) *Rewe Zentralfinanz*, para. 36.

\(^{307}\) *Rewe Zentralfinanz*, para. 43. See also Opinion AG, para. 32.

\(^{308}\) *Rewe Zentralfinanz*, para. 48. The *Rewe Zentralfinanz* ruling is in line with the decisions in *Bosal* and *Keller Holding*.

\(^{310}\) These restrictions are partially addressed by the Merger Directive (90/434/EEC).

\(^{311}\) ECJ, 21 November 2002, Case C-436/00, *X and Y v Risskatteverket*, *ECR* I-10829.
iv) Intra-group loans (thin capitalisation rules)

95. Finally, restrictions on the right of establishment can come up in relation with the treatment of interest payments from companies to non-resident shareholders. Under thin capitalization rules, when a loan is supplied to a subsidiary by a parent company as a substitute for equity, the interest paid on the loan will not be deductible and will be treated as a dividend. This may happen not only when the interest is excessive, but also when the subsidiary would not have obtained such a loan from a third party.

Under German tax law, the deduction of interest paid by a German corporation to a foreign parent company was denied except when the loan could have been obtained from a third party. Lankhorst-Hohorst was a subsidiary in Germany of a Dutch company. The Dutch parent of that Dutch company had granted Lankhorst a loan, subordinated to the claims of other creditors and accompanied by a letter of support, as a substitute for a more expensive bank loan. Lankhorst-Hohorst was in a loss-making situation. The German tax authorities argued that no third party would have granted such a loan and denied the deduction of the interest. The Court held that the difference in treatment between non-resident and resident parent companies was in violation of the right of establishment.

96. Subsequently, in the Test Claimants in the Thin Cap Group Litigation case, UK thin capitalisation rules were at issue. Contrary to what might be inferred from the Lankhorst-Hohorst ruling, the Court held that such rules may be an effective tool in preventing the diversion of profits. Nevertheless, on the basis of the freedom of establishment, the Court also held that such rules would be compatible with EC law only in so far as they applied to purely artificial arrangements entered into for tax reasons alone.

312 Sec. 8a of the German Corporation Tax Law.
313 ECJ, 12 December 2002, Case C-324/00, Lankhorst-Hohorst v Finanzamt Steinfurt, ECR I-11779.
314 Case C-524/04, Test Claimants in the Thin Cap Group Litigation (fn 45).
In reaction to the judgement, Germany abolished discrimination of cross-border thin capitalization by extending the disadvantage, namely the treatment of interest payments on loans as covert dividend, to purely domestic activities. The change is purely cosmetic and does not address the substantive problem that interest disallowed and taxed in Germany may be taxed again in the residence country of the recipient, which is not the case in an all-German situation.

In a similar way, after the French Conseil d’Etat had found French thin capitalization rules to the sole detriment of foreign parents to be incompatible with the non-discrimination clause of some double tax treaties, France decided with effect from 1 January 2007 to disallow deduction of interest paid between related companies even when the beneficiary of the payment is resident. In Portugal, with effect from 1 January 2006, thin capitalization rules are no longer applicable to non-resident entities resident in an EU Member State. Prior to that date, domestic rules were to be interpreted in the light of the Court rulings. Spanish rules were amended with effect from 1 January 2004.

Thin capitalization rules applying indiscriminately to interest paid by and to both domestic and foreign taxpayers have also been introduced by the Netherlands. However, this is an indirect consequence of Court case-law, namely the Bosal decision, which caused the Netherlands to amend the Dutch Corporation Tax Act in order to extend the deduction of interest applicable to domestic participation to foreign participations, a measure that could not be undertaken without adopting necessary anti-abuse provisions.

In Portugal, thin cap rules do no longer apply to EU resident entities as from 1st January 2006.

97. It is worth adding that, if the situation concerned a lender established in a third country the right of establishment would not apply, nor would EC law. In Lasertec, a Swiss parent company granted the loan to a German subsidiary in which it held two thirds of the capital. Deduction of the interest paid was denied on the basis of the debt of capital rates. The Court held that the restriction of capital movement was an unavoidable consequence of the restriction on the freedom of establishment and that therefore the freedom of establishment was the governing provision. However, this provision could not be relied upon with regard to relations with a third country.

315 Sec. 8a German Corporate tax law (KStG).
316 Conseil d’Etat, 30 December 2003, Andritz.
318 For a Court decision applying Lankhorst-Hohorst: see Spanish Central Economic-Administrative Court no. 00/2396/2004.
320 TNS Online, 2 November 2006. See also Administrative and Tax Court of Lisbon which ruled that pre-2006 thin cap rules limiting the deduction of interest paid to EU Parent companies were incompatible with Articles 43, 49 and 56 EC, id.
C. TAXATION OF COMPANY SHAREHOLDERS

98. The issues concerning the taxation of company shareholders are mainly related to the potential (and often actual) risk of economic double taxation of distributed income. Although most Member States have found solutions which mitigate the economic double taxation of such income, these national solutions vary according to the political choices of the various Member States, and therefore problems may arise when corporate income crosses national borders.

99. Concerning dividends, a distinction should be drawn between outbound dividends (i.e. dividends paid by a domestic corporation to foreign shareholders, individuals or corporations) and inbound dividends (i.e. dividends paid by a foreign EU corporation to domestic shareholders, individuals or corporations). With regard to this distinction, the issues raised before the Court concern the equal treatment of outbound dividends paid to foreign and domestic shareholders and of inbound dividends from foreign and domestic sources which are paid to domestic shareholders.

100. Moreover, other questions have been addressed by the Court, such as the taxation of capital gains and the deduction of costs related to participations.

1. Tax treatment of outbound dividends

a) Withholding tax on outbound dividends

101. Traditionally, the State of the company paying a dividend will impose a withholding tax. Sometimes the withholding is waived in favour of domestic shareholders, especially parent companies. In most cases, the withholding tax rate is reduced by DTCs, depending on the person of the shareholder (parent company or not). The DTC generally provides that the State of residence of the shareholder will grant a tax credit for the foreign withholding. However, to a foreign parent, the tax credit will often be ineffective to relieve double taxation:

- if the residence country exempts foreign dividends, no tax is due so that no credit is given;
- if the residence country grants both a direct tax credit for the withholding and an indirect tax credit for the underlying corporate tax due in the source country in respect of the dividend, the credit will often exceed the amount of national tax due and such excess credit will be lost.

102. The Court has recently issued a number of important judgements on the compatibility of withholding taxes on outbound dividends with EC law. In *Denkavit Internationaal*[^1], France levied a withholding tax on dividends paid to foreign parents. Dividends paid to domestic parents were not subject to such withholding and moreover economic double taxation of such dividends was eliminated by a 95% exemption in the hands of the parent. The parent company established in another Member State would therefore be taxed more heavily than a domestic parent company. The Court found in this case that there was a restriction of the freedom of establishment. In fact, although the DTC between the countries of the subsidiary and the parent companies provided for a tax credit in the parent company's country (here, the Netherlands) to take into account the withholding tax, the restriction was not eliminated as the dividend was tax-exempt in the Netherlands, so that no credit was effectively granted.

[^1]: From, in most cases, 25% to 15% or even 5 or 0% in favour of parent companies.
103. In *Amurta*[^324], the Court was faced with a similar situation but in the absence of sufficient shareholder influence. The case was analysed under the free movement of capital and not under the right of establishment. The Court found that the free movement of capital was restricted and that the difference in the treatment of non-residents and residents could not be justified. Indeed, the Court held that once a country taxes residents and non-residents on dividends distributed by a resident company, it puts them in a comparable situation and the coherence of the tax system does not justify such a difference in treatment, as there is no link between the exemption for resident companies and a compensatory tax which they would bear. It was alleged that Portuguese law and the DTC between Portugal and the Netherlands provided for a credit of the withholding tax at source in the State of residence. The Court responded that, although a Member State may not rely on a tax benefit granted unilaterally by another Member State to justify a violation of Community law, it may, however, achieve conformity with Community law by treaty provisions, subject to the scrutiny of national Courts.

The *Denkavit International* decision had ramifications across Europe. Member States had already begun to amend their tax legislation in anticipation of the ruling. However, compliance by Member States varies. France complied by waiving the withholding in favour of companies established in the EU or in the EEA, holding 5% of the shares of a French company and deprived of the possibility to credit the withholding in their State of residence[^325]. The Netherlands complied by extending the withholding waiver in respect of dividends distributed to shareholders which would have been eligible for the Dutch participation exemption to parent companies resident in other EU Member States, but, surprisingly, not in EEA States[^326]. The waiver also benefits foreign exempt legal persons, such as pension funds, which would be exempt if they were Dutch. The withholding tax systems of countries such as Germany, Italy[^327] or Spain will also require amendments. Iceland also abolished the existing 15% withholding tax on dividends paid to non-Icelandic resident companies[^328].

The Commission on its side has initiated procedure against numerous Member States:

- Austria and Germany: Reasoned Opinion[^329];
- Italy and Finland: request for information[^330].

The Italian Finance Bill for 2008 should lead to amendments of Italian legislation so that the rate of the withholding tax on outbound dividends would be reduced to 1,375% (corresponding to the tax paid on domestic dividends) on the condition that the recipient be a company or entity resident in the EU or the EEA or a company or entity resident in a State included in the list of countries granting exchange of information and subject to corporate income tax in its State of Residence[^331].

[^325]: Instructions no. 67 of 10 May 2007, 4 C-7-07 and no. 89 of 12 July 2007, 4 C-8-07 (CGI, Article 119 bis 2).

[^327]: 27%, subject to a refund of 4/9ths

[^328]: TNS Online, 16 April 2007.

[^330]: Ibid.

[^331]: For dividends accrued starting from the financial year 2008.
Regarding outbound dividends and non-resident individuals, the Finnish Central Tax Board recently granted an advance ruling on the fact that withholding tax on dividends received by non-residents may not be more burdensome that taxation of a resident recipient when the two are in a comparable situation\(^{332}\).

- Belgium, Spain, Portugal, the Netherlands, Luxembourg and Latvia\(^{333}\).

The Commission has also opened infringement procedures against nine Member States on the particular issue of foreign investments by pension funds (portfolio investment)\(^{334}\). Recently, an Estonian court decided on the compatibility of domestic rules on dividends paid to a non-resident UCIT and refused to refer the case to the Court\(^{335}\).

b) Tax credit for dividends

104. In \textit{Fokus Bank}\(^{336}\), the EFTA Court, which interprets the Agreement on the European Economic Area with regard to the EFTA States (Iceland, Liechtenstein and Norway), was faced with the issue of a tax credit granted to shareholders in respect of corporation tax paid by the distributing company: such a credit is granted in Norway to resident shareholders, but not to non-resident shareholders. Contrary to what the Court of Justice would later hold, the EFTA Court considered that this differential treatment was in violation of the free movement of capital (Article 40 EEA), as it deterred non-residents from investing in Norway.

105. In the two following cases, the issues stemmed from the system then in force in the UK to prevent economic double taxation. A shareholder receiving a dividend was entitled to a partial tax credit on account of the tax paid by the distributing company which accordingly had to pay “advance corporation tax” (ACT, abolished in 1999). When the recipient of the dividend was another company, it could apply the ACT against the ACT due on its own distributions and a UK final shareholder would be granted a tax credit.

However, when a non-resident company received a dividend from a company resident in the UK, it was in principle not entitled to a tax credit, except if a DTC so provided. The ACT was nevertheless payable by the distributing company.

When a UK parent company held at least 51% of a UK subsidiary, both companies could make a group income election. In that case, no ACT was payable by the subsidiary upon distribution of a dividend. The parent company was not entitled to a tax credit. ACT was payable only when the parent company redistributed the dividend.

106. In \textit{Metallgesellschaft/Hoechst}\(^{337}\), the Court found that the denial of the group income election to foreign parent companies constituted an unjustified restriction of the freedom of establishment.

\(^{333}\) Only as regards dividends to EEA countries for Luxembourg. Also see Commission Press Release IP/07/06 of 22 January 2007 and Press Release IP/06/1060 of 25 July 2007. As to Latvia, changes have been announced (see TNS Online, 9 March 2007).

\(^{334}\) See Commission cases 2006/4102 (Czech Republic), 2006/4103 (Denmark), 2006/4106 (Spain), 2006/4095 (Lithuania), 2006/4108 (Netherlands), 2006/4093 (Poland), 2006/4104 (Portugal), 2006/4105 (Slovenia), 2006/4107 (Sweden) and Commission Press release IP/07/616 of 7 May 2007.

\(^{335}\) Tallinn Administrative Court, 10 May 2007, appealed. The Court mainly considered Estonian and non-resident UCITS as non comparable.

In fact, according to the ACT regime, UK subsidiaries had to pay ACT on dividends paid to non-resident (EU) shareholders while no ACT was due on dividends paid to resident shareholders. This system led to a cash-flow disadvantage detrimental to non-resident shareholders.

The UK House of Lords awarded compound interest in order to compensate for this ACT-related timing disadvantage, but refused to extend this case-law to non-EU residents.\footnote{House of Lords, 23 May 2007, \textit{Boake Allen Ltd \& Ors v Revenue and Customs} [2007] UKHL 25, published on the website of the Parliament \url{http://www.publications.parliament.uk/}. The case was mainly decided on the ground of the DTC non-discrimination clause. However, regarding the free movement of capital, the House of Lords ruled that even if the domestic provisions constituted a restriction, Article 57 EC disapplied the application of Article 56 EC.}

\textbf{107. ACT Group Litigation}\footnote{ECJ, 12 December 2006, Case C-374/04, \textit{Test claimants in Class IV of the ACT Group Litigation v Commissioners of Inland Revenue}, \textit{ECR} I-11673.} raised various questions concerning the ACT regime (see no. 105). According to the Court, the fact that a resident parent company which received a dividend was entitled to a tax credit, whilst – except under certain DTCs – a non-resident parent company was not, did not constitute a restriction on the freedom of establishment or on the free movement of capital. In effect, as regards the mitigation of economic double taxation of profits in the hands of a subsidiary and a parent company, a non-resident parent company is not in the same situation as a domestic parent company: it is for the State of residence of the parent company to avoid double taxation. It is not compelled to do so, except when the Parent-Subsidiary Directive\footnote{Council Directive 90/435/EEC on the common system of taxation applicable in the case of parent companies and subsidiaries of different Member States, \textit{OJ} L 225, 20.8.1990, p. 6.} applies. To impose the duty to avoid double taxation upon the subsidiary’s State of residence would deprive this State from the right to tax profits which arise in its territory.

The Court of Justice, furthermore, considered that the UK, in granting by treaty the right to a full or partial tax credit to parent companies resident in the Contracting States alone, did not unduly restrict the freedom of establishment of parent companies resident in States to which no such treaty applied. In the absence of tax harmonization, in particular in the field of elimination of double taxation, Member States are free to allocate fiscal jurisdiction amongst themselves by means of bilateral agreements.

The UK ACT regime was abolished already in 1999 and replaced by a system of quarterly installment payments of corporation tax.\footnote{\url{http://www.hmrc.gov.uk/stats/corporate_tax/introduction.pdf}.}

\textbf{2. Tax treatment of inbound dividends}

\textbf{108.} The treatment of inbound dividends has also been scrutinized by the Court. These cases often address the compatibility with EC law of national mechanisms, aimed at avoiding or mitigating economic double taxation of dividends in the hands of the shareholders, but restricted either to resident shareholders or to dividends distributed by resident companies. A further group of judgements specifically addresses the issue of intra-group dividends between parent companies and subsidiaries which are located in different Member States.

\textit{Boake Allen Ltd \& Ors v Revenue and Customs} [2007] UKHL 25.
a) Branches and economic double taxation of dividends

109. A national tax regime of dividends can discriminate between branches of non-resident companies and subsidiaries of domestic companies. The first case brought before the Court of Justice in the field of direct taxation concerned the “avoir fiscal”\(^{342}\), a tax credit granted to French resident shareholders equal to half the dividend received, as a partial relief from corporation tax paid on the distributed profits\(^{343}\). This credit was denied to non-residents and in particular to French branches of foreign insurance companies. It was extended to non-residents, but never to branches, by some DTCs concluded by France. The Court found this denial to be in breach of the Treaty provision securing freedom of establishment, whether by creation of a branch or a subsidiary\(^{344}\).

110. The favourable tax regime for dividends applicable to residents can also find its source in a DTC. In Saint-Gobain, a tax relief provided for in a DTC concluded between Germany and the United States was partly denied to a German branch of a French company, on the ground that the DTC applied only to German companies and companies subject to unlimited tax liability in Germany. The Court held that the Member States must grant to permanent establishments the same advantages as to resident companies.

As from 1994\(^{345}\), even before the judgement was delivered, German law extended to permanent establishments both the dividend exemptions granted by DTCs\(^{346}\) and the indirect credit on account of foreign corporation tax paid by a subsidiary on distributed profits\(^{347}\). The discriminatory provision concerning wealth tax was also repealed\(^{348}\).

b) Differential taxation of shareholders based on company residence

111. Member State laws can also be found to be incompatible with EC requirements with regard to the introduction of distinctions in the tax treatment of their (resident) shareholders as concerns the State of residence of the company in which those shareholders have their holding. In Verkooijen\(^{349}\), the Court found a Dutch exemption only available for dividends received from a domestic company to be contrary to the free movement of capital.

112. Discrimination can also occur as regards a difference in the tax rate on foreign and domestic inbound dividends, as the Court held in Lenz\(^{350}\). The case concerned Austrian legislation, which provided that dividends from domestic corporations were taxed at a reduced rate while dividends from foreign shares were taxed at the ordinary rate of income tax.

113. One method to avoid double taxation of dividends consists in granting the shareholder a credit corresponding to all or part of the corporation tax paid by the distributing company. In Finland, the shareholder of a Finnish company was granted such a credit, corresponding to the Finnish corporation tax rate.

345 Law to Maintain and Improve the Attraction of the Federal Republic as a Site for Business of 13 September 1993, BGBl I, p.1569.
346 Sec. 8b (4) German Corporate tax law (KStG).
347 Sec. 26(7) KStG.
349 ECJ, 6 June 2000, Case C-35/98, Staatssecretaris van Financiën v Verkooijen, ECR I-4073.
350 ECJ, 15 July 2004, Case C-315/02, Lenz v Finanzlandesdirektion für Tirol, ECR I-7063.
The credit did not apply in respect of foreign dividends. In *Manninen*[^351^], the Court held that the denial of the credit in respect of dividends from other Member States constituted a restriction on the free movement of capital.

**In reaction to the Court’s judgement, Finland abolished the tax credit regime[^352^], as did France[^353^], the United Kingdom and Germany.**

114. The same conclusion was reached in *Meilicke*[^354^] in respect of the German tax credit granted to shareholders of domestic corporations, corresponding to the (lower) corporation tax rate on distributed profits (30%).

**Following the decision, Germany in order to limit the foreseeable claims for tax refunds has changed its procedural law[^355^].**

115. However, an unfavourable tax treatment of foreign dividends is not always contrary to the EC Treaty. In *Kerckhaert-Morres*[^356^], the Court found that Belgian law was not contrary to the free movement of capital as it did not discriminate between Belgian dividends and dividends from other Member States. Even if Belgian individual taxpayers receiving foreign dividends bear a foreign withholding tax burden plus Belgian taxation on the net dividend at the rate of the Belgian withholding tax, whereas Belgian taxpayers receiving Belgian dividends will only bear the Belgian withholding tax, resulting in a higher net dividend, the same rate of tax applies in Belgium to both classes of income. The situation in *Kerckhaert-Morres* is thus different from the one found in the *Verkooijen*, *Lenz*, or *Manninen* cases, where the State of residence treated foreign dividends differently from domestic dividends, denying to the former a tax benefit granted to the latter.

**The European Commission does not seem to share that view and has decided to bring Belgium to the Court[^357^].**

116. Dividends could also come from a non-EU Member State. In *Holböck*[^358^], the Court held that the free movement of capital was applicable to dividends received by an Austrian shareholder from a Swiss company[^359^]. In this case, however, the restriction created under Austrian law could be upheld under Article 57 EC, grandfathering provisions in existence in 1993.

[^353^]: See Finance Law 2004. On 21 December 2006, the Administrative Lower Court of Versailles ruled that the French legislation on the “avoir fiscal” tax credit and the precompte was not compatible with the free movement of capital principle and ordered for a refund of EUR 156 million. *TNS* Online (21 February 2007) mentions a possibility for the French State to have to refund between EUR 3 and EUR 5 billion.

[^358^]: ECJ, 24 May 2007, Case C 157/05, *Holböck v FA Salzburg-Land*.

[^359^]: An investment creating lasting and direct links between a person and an undertaking falls within the category of direct investment, which is inspired from the nomenclature of capital movements set out in Annex I of the Council Directive 88/361/EEC of 24 June 1988 for the implementation of Article 67 of the Treaty [Article repealed by the Treaty of Amsterdam], *OJ* L 178, 8.7.1988, p. 5.
117. Investment in a third country was also discussed in A and B.\(^{360}\) Sweden had enacted a special regime for companies with “concentrated shareholding” (i.e. companies in which 50% of the shares are held by less than five individuals). Dividends of such companies were taxed as income from capital only up to a given return on the capital invested, including a fraction of any salaries paid to employees, provided that they were employed in Sweden or in another Member State, but not in a third country. The Court held that the freedom of establishment did not apply to the creation of a branch in a third country and that the free movement of capital could not apply, since the restriction was merely an unavoidable consequence of the restriction of the right of establishment.

118. In the recent A case, however, the Court considered that the freedom of capital was restricted by a Swedish legislation exempting a shareholder in respect of certain dividends, provided that the distributing company is established in a EEA State or a third State with which a DTC providing for the exchange of information has been concluded. Nevertheless, the national provision at stake was considered justified, because in the relations with third countries, a Member State cannot verify with the same degree of reliability that the conditions for the granting of the exemption are met as in intra-Community relations.\(^{361}\)

119. Finally, the question of the tax treatment of intra-group dividends has also been addressed by the Court. In Franked Investment Income (FII) Group Litigation,\(^{362}\) the Court had to examine various differences in the tax treatment of foreign and domestic inbound dividends received by UK parent companies in relation with ACT (see no. 105), some of which were found incompatible with EC law.

These cases led to the demise of imputation systems in the Union (see no. 113). They were generally replaced by systems under which part of the dividend received by an individual shareholder is subject to tax. This is the case in Finland. The UK Government published in June 2007 a discussion document proposing a.o. an exemption regime for foreign dividends received by large companies.\(^{363}\) However as regards inbound dividends received by UK-resident individuals, the tax credit should be extended to dividends from non-UK companies.\(^{364}\) France on its side finally withdrew the whole tax credit for dividends, which formerly had been extended to French permanent establishments of non-resident companies in application of the Avoir Fiscal case.\(^{365}\)

As regards exemption, the Austrian Independent Tax Senate stated that a minimum holding requirement for the exemption of dividends received from a foreign company while there is no such requirement for domestic dividends is in breach of the free movement of capital and thus this opinion also extends to dividends received from non-EU or non-EAA based companies.\(^{367}\)

\(^{360}\) ECJ, 10 May 2007, Case C-102/05, Skatteverket v A and B, ECR I-3871.

\(^{361}\) ECJ, 18 December 2007, Case C-101/05, A, paras. 60-64.

\(^{362}\) Case C-446/04, Test Claimants in the FII Group Litigation, fn 206.

\(^{364}\) These changes will have effect from 6 April 2008. See UK Budget of 21 March 2007 published on http://www.hmrc.gov.uk/budget2007/master-notes.pdf, p. 97.

\(^{365}\) Law no. 2003-1311 of 30 December 2003, art. 93.

\(^{367}\) 13 January 2005. Based on the “acte clair” doctrine, the case was not referred to the ECJ.
The Commission is challenging the Greek regime which exempts dividends received by individuals from resident companies while taxing dividends paid by non-resident companies; according to the Commission the credit granted for the foreign corporate tax can lead to a higher tax burden due to the progressive tax scale applicable to individuals.

3. Tax treatment of acquisition, holding and alienation of shares

120. Shareholders of EU companies which are resident in other Member States can also suffer disadvantages that are not directly related to the taxation of dividends. These disadvantages can concern, amongst others, the acquisition or the holding of shares, the possibility of deducting the costs related to participations, the tax treatment of capital gains arising from the alienation of these shares, and the tax treatment of interest received from a company in which they have a holding.

a) Acquisition and holding of shares

121. Shareholders of EU companies which are resident in other Member States can be excluded from tax advantages linked to the acquisition of shares. In *Weidert-Paulus*, Luxembourg law granted tax relief up to LUF 60,000 for the acquisition of shares in Luxembourg companies, but denied that relief in respect of foreign participations. As regards shares owned in Belgian companies by the taxpayer, the denial of the relief was held to be contrary to the free movement of capital.

122. The mere ownership of foreign shares cannot be taxed in a discriminatory manner. In *Baars*, Dutch law provided for an exemption for wealth tax applicable to substantial holdings in Dutch companies but not in foreign companies. The Court considered that in respect of a 100% holding of a Dutch resident in an Irish company, this disallowance was contrary to the freedom of establishment.

123. Next to wealth tax come inheritance duties. The *Geurts and Vogten* case addressed the inheritance tax law of the Flemish Region of Belgium which exempted from inheritance tax shares in family undertakings employing at least five workers in Flanders. The Court ruled that the freedom of establishment prohibits such legislation insofar as the exemption condition is not satisfied by employing workers in other Member States.

b) Costs related to participations

124. Discrimination can arise with regard to the possibility of deducting the costs connected with participations in foreign companies. For example, under Dutch law, interest and costs linked to participations could be deducted only if they were incurred in connection with profits taxable in the Netherlands, i.e. when the subsidiary was Dutch or had a permanent establishment in the Netherlands. The Court in *Bosal* saw in this limitation a restriction on the right of establishment which hindered the creation of subsidiaries in other Member States.

---

371 Art. 7 (2) and 3 (c) Luxembourg Wealth Tax Law 1964.
Indeed, even though the Parent-Subsidiary Directive allows Member States to provide that charges relating to a holding may not be deducted when the Directive applies to relieve double taxation of dividends, Member States must exercise this right in accordance with the EC law.

The implementation of the judgement in the Netherlands by amending the Corporation Tax Law in 2004 was closely linked with the adoption of thin capitalization rules\(^{376}\). See above no. 96.

125. In *Keller Holding*\(^{377}\), the Court was confronted with a German law denying the deduction of expenditure linked to dividends received from a subsidiary located abroad and exempt from tax under a DTC\(^ {378}\). Keller Holding, a German company, was barred from deducting the fraction of its financing costs corresponding to its Austrian subsidiary, because the foreign dividend was exempt, whilst a dividend of German origin would have been taxable, but subject to a credit for the underlying German corporate income tax, which has the effect of an exemption\(^ {379}\). The Court held that denying the deduction in respect of legally exempt foreign dividends whilst allowing it in respect of economically exempt domestic dividends was a restriction on the right of establishment.

The implementation into German law required several amendments of the relevant legislation. Initially, Germany amended the provisions to the extent that exemption for profits in the form of foreign dividends was extended to internal situations. However, a difference remained when the costs did not exceed a certain percentage of the dividend: in this case, cross-border situations were still treated less favourably. Hence, Germany had to re-amend its legislation. Under current law, 5% of all dividends, both domestic and foreign, are treated as non-deductible business expenses and actual holding costs are fully deductible\(^ {380}\).

c) Capital gains on shares

126. Shareholders can be liable to tax on the capital gain realised on a sale of their shares. Under Belgian tax law, capital gains were taxed when they were realized by individuals selling a substantial holding to a foreign company, whilst they were not taxed when selling to a Belgian company\(^ {381}\). In *De Baeck*\(^ {382}\), the Court found that this difference in treatment was contrary to freedom of establishment if the seller’s holding conferred on him an influence in management, and that the difference was contrary to the free movement of capital otherwise. Although Belgium did not so far amend its statute, the tax administration no longer applies the taxation when the sale is in favour of a company established in the European Union or the EEA\(^ {383}\).

---

\(^{376}\) Decree of 9 February 2004, TNS Online 4 March 2004. See also Court of Appeal of Amsterdam (1st February 2006) which concluded to the application of Bosal to costs relating to sub-subsidiaries within the EU and extend this statement to situations non-covered by the Parent Subsidiary Directive on the base of the free movement of capital (TNS Online, 22 February 2006). The same solution applies to situations before 1 January 1992 in application of the free movement principle (Supreme Court, 1st April 2005, TNS Online, 7 April 2005); the Court that art. 67 has no direct effect.

\(^{378}\) Sec. 8 b(1) German Corporation Tax Law 1991.

\(^{379}\) Sec. 36 (2) (3) German Income Tax Law 1990.

\(^{382}\) ECJ, 8 June 2004, Case C-268/03, *De Baeck v Belgische Staat* (Order), ECR I-5961.

Similarly, in *Commission v Spain*[^384], a Spanish law which granted a differentiated relief for capital gains on shares according to their quotation on Spanish regulated stock exchanges or on other exchanges was found to be in violation of the freedom to supply services and of the free movement of capital.

**127.** In *Grønfeldt*[^385], the Court examined a German law, which was amended to tax capital gains on shares as soon as the taxpayer held a 1% participation (as opposed to 10% participation formerly). This new law applied as of the start of the 2001 financial year to participations in foreign companies and as of the start of the 2002 financial year to participations in domestic companies[^386]. This differentiation was held to be contrary to the free movement of capital and could not be justified by reasons linked to the prior reform of the tax treatment of domestic dividends in Germany.

**128.** In some instances the treatment of a gain made on the disposal of shares can differ according to the residence of the taxpayer, following the application of international conventions. *Bouanich*[^387] addressed the consequences for a French resident shareholder of the repurchase by a Swedish company of its own shares. Under Swedish tax law, that transaction may generate to Swedish residents capital gains taxable at 30% after deduction of the acquisition cost, whilst the same income is characterized as a dividend for non-residents and is taxable without any deduction. The Court held that this difference of treatment was incompatible with the free movement of capital. However, under the French-Swedish DTC, as interpreted in the light of the OECD’s commentaries on the Model OECD Convention[^388], a French resident is allowed to deduct from the price received the nominal value of the repurchased shares and is taxed at 15% on the difference. The Court acknowledged that the DTC must be taken into account: it left it for the national judge to determine, in view of both the cost of acquisition and the nominal value of the shares, whether equality was thus reinstated.

In the course of the procedure, Swedish law was amended in order to eliminate the discrimination. To both resident and non-resident taxpayers, the tax base will be the difference between the sales proceeds and the acquisition cost of the shares[^389]. However, the income is still categorized as a capital gain to residents and as a dividend to non-residents. Thus, if the repurchase results in a loss, a resident taxpayer may offset it against capital gains otherwise realized, whereas the non-resident taxpayer may not, since his income is considered to be a dividend[^390].

**129.** Capital gains are often taxable in the country of residence and at the moment of the disposal of the shares. This situation can lead EU residents to transfer their residence before selling their participations in order to benefit from a more favourable tax regime. In *de Lasteyrie*[^391] a French provision under which unrealized capital gains on important shareholdings were taxable at the time of transfer of the taxpayer's residence was found contrary to Article 43 EC.

[^384]: ECJ, 9 December 2004, Case C-219/03, *Commission v Spain*, not published in ECR.
[^385]: ECJ, 21 December 2007, Case C-436/06, *Grønfeldt v Finanzamt Hamburg-Am Tierpark*.
[^388]: OECD Commentary, Article 13.31.
Even if under certain conditions, the payment of the exit tax could have been deferred, the Court found that the taxpayer was, by establishing himself abroad, subjected to a tax on an unrealized gain which he would not have had to pay had he stayed in France.

130. In N\textsuperscript{392}, the Court examined the Dutch exit tax legislation in the case of a taxpayer holding 100\% of the shares of a company. The Court found that the freedom of establishment was indeed hindered, but only to the extent that the deferral of the tax until actual disposal was made subject to a security for payment and a decrease in value, subsequent to departure, was excluded in the computation of the gain. The Court found the principle of assessment with deferred payment in line with the allocation of taxing powers according to the principle of territoriality\textsuperscript{393}.

According to the Court’s case law, Germany amended its exit tax for individuals\textsuperscript{394} after the Ministry of Finance tried to render it compatible with EU law by an administrative order\textsuperscript{395}. Similarly, France, although it has complied with the Lasteyrie judgement as to individual taxation\textsuperscript{396}, maintains for the deferral of corporate taxation a general requirement that the shares received in exchange for the contribution of the branch of activity must be kept during three years. This condition seems to go beyond permissible anti-abuse rules that must, according to the Court, be applied following a case-by-case standard\textsuperscript{397}. Austria\textsuperscript{398} and Denmark\textsuperscript{399} modified their law according to the judgement.

\textsuperscript{392} ECJ, 7 September 2006, Case C-470/04, N v Inspecteur van de Belastingdienst, ECR I-7409.

\textsuperscript{393} N, para. 46.

\textsuperscript{394} Sec. 6 of the German Foreign Tax Act has been modified in December 2006 by the "Gesetz über steuerliche Begleitmaßnahmen zur Einführung der Europäischen Gesellschaft und zur Änderung weiterer steuerrechtlicher Vorschriften (SEStEG)" (07.12.2006 BGBL. I S. 2782, 2007 S. 68) The exit tax has been amended for the case, where the holder of the shares moves to another EU Member state. The payment of the tax is deferred to the moment, when the shares are effectively sold or the shareholder moves outside the EU. Germany decided to modify its legislation after the Commission launched an infringement procedure.

\textsuperscript{399} Danish Law L199 of 30 March 2004, TNS Online, 19 May 2004.
III. TOWARDS THE EUROPEANIZATION OF DIRECT TAX SYSTEMS

A. ADAPTATION OF NATIONAL TAX SYSTEMS

131. The Court’s case law, especially on the EC freedoms, has a large impact on the exercise by Member States of their sovereignty. National direct tax systems must be framed in accordance with the requirements set up by EU law as interpreted by the Court.

1. Residence as a legitimate criterion to apply different tax rules

132. In line with international practice, the fiscal systems of the Member States are based on the distinction between residents and non-residents. As long as residence in a given Member State, and not "EU residence", is the relevant criterion for tax purposes, the tax systems shall keep causing fragmentation of the Internal market. Under international tax practice, residence is considered as a connecting factor more appropriate than nationality in order to found fair and efficient taxation based on the ability-to-pay and equity principles.

This is reflected by DTCs practice. Residents may be taxed on their worldwide income and the tax burden is fixed taking into consideration the fact that they benefit from the State welfare. Non-residents are considered to be in a different situation and are therefore taxable only on the income sourced in that State, taking into consideration that such State has no taxing power on the non-residents’ foreign income. However, under DTCs the actual taxing of worldwide income only takes place in States which have opted for the credit method, not in those who favour the exemption method; in the latter case the actual taxation is limited to the domestic territory.

133. The Internal market is inspired by the idea of a single area within which movement is free. In this respect, national measures that would hinder taxpayers engaging in cross-border activities with other Member States are often incompatible with EC law. The Treaty freedoms are also specific expressions of the non-discrimination principle voiced by Article 12 EC. As such they prohibit Member States to discriminate nationals of other Member States as against their own nationals.

In tax matters, this principle has been adapted to differences of treatment between residents and non-residents, since such differences are likely to constitute indirect or disguised discrimination. The most classical example of direct taxation provisions incompatible with the Internal market occurs when a Member State grants a tax advantage to residents, but denies it to non-residents who are in a comparable situation. The Court has made numerous applications of this principle, such as the Schumacker ruling concerning the taking into account of the personal situation of the non-resident taxpayer earning almost all his income in the State of activity (no. 35), or the Gerritse and Conijn decisions on the right of non-residents to deduct expenses incurred in direct relation with the income earned in the State of activity (no. 39).

As to corporate taxation, the freedom of establishment enshrines the right to choose the form of establishment (Article 43 EC). It thus prohibits Member States to treat branches and subsidiaries of non-resident EU companies less favourably than resident companies as to the tax rate (Royal Bank of Scotland, no. 58), the right to interest on overpaid tax (Commerzbank) or as to a tax deduction of research expenses carried out in other Member States (Baxter, no. 63).

401 Note that the USA also refer to the criterion of nationality.

402 While at the origin limited to economic activities, the freedom of movement is now recognized to all EU citizens (Article 18 EC, introduced with the Treaty of Maastricht).
Another clear-cut situation incompatible with the EC freedoms occurs when persons engaging in genuine cross-border activities are denied tax advantages in their country of residence which they would have been granted if they had operated in a purely national context (De Groot, no. 38 Laboratoires Fournier, no. 81).

134. Nevertheless, the EC freedoms do not require Member States to apply the same tax treatment to residents and non-residents across the board. Member States can indeed in many cases assume that tax advantages similar to those which they confer to their residents should be granted to non-resident taxpayers by their own State of residence. As to personal taxation, this is the case for the taking into account of the personal and family situation when the taxpayer does not earn a substantial part of its income in the Member State concerned. As to corporate taxation, losses of a subsidiary with a parent company resident in another Member State are deemed to be taken into consideration in the State of residence of the subsidiary. It is only in exceptional circumstances that the parent company’s State of residence has to admit the deductibility of losses incurred by the subsidiary resident in a different Member State (Marks and Spencer, no. 91).

135. It remains unclear to what extent the EC Treaty limits Member States in adopting different income tax systems for residents and non-residents as regards taxable events, tax base, tax rates or tax assessment. In several Member States, non-residents are indeed subject to a withholding tax on the gross amount of income earned in that State. According to the Court, the withholding system can constitute a restriction on the EC freedoms, but can often be justified (Gerritse, Scorpio, no. 39). Withholding taxes on dividends can also contravene the EC freedoms, when they apply only to non-resident shareholders (Denkavit Internationaal, no. 102).

136. Another issue in the field of direct taxation concerns the possibility for the Member States to differentiate between non-residents of different Member States among each other, i.e. to grant the resident treatment only to residents of certain Member States but not to all of them. Currently, an infringement procedure is pending against Ireland on the taxation of investment income sourced in the UK, which could lead to a judgement of the Court.

137. As to residents of third countries, Member States remain at liberty to regulate the applicable tax treatment, except in cases where the free movement of capital – and only that freedom - is at stake. This happens, in particular, for outbound investments by EU residents in third country companies, as the Holböck case (no. 116) shows. However, numerous exceptions, such as the “grandfathering clause” of Article 57 EC and justifications for the restrictions on this freedom, such as the effectiveness of fiscal supervision (A, no. 118), are allowed by the EC Treaty.

---

403 Scorpio, paras. 36-38.
404 Some commentators conclude that whilst it is prohibited to discriminate by unilateral measures, it would be lawful to do so by means of international conventions (Wathelet, M., “Tax sovereignty of the Member States and the European Court of Justice: new trends or confirmation?” in Hinnekens, L. and Hinnekens, Ph. (ed.), A vision of taxes within and outside European Borders, Festschrift in honor of Prof. Dr. Frans Vanistendael, Kluwer Law International, 2008, p. 905.
405 See also infra on the most-favoured nation clause in DTCs.
406 Commission Press Release IP/07/445 of 30 March 2007. Normally, Ireland does not tax income received by non-residents from money invested abroad if the interest is left on the foreign bank account. Excluded from this rule is income sourced in the UK. Ireland thus treats such income less favourably than income arising elsewhere in the EU, what the Commission considers contrary to the free movement of capital.
407 Sometime the restrictive effect of a national legislation on the free movement of capital is an unavoidable consequence of the restriction on freedom of establishment, which does not apply in relations with third countries. See ECJ, Lasertec (fn 321).
Accordingly, taxation on the basis of residence by Member States is not fundamentally jeopardized by the application of EC freedoms. However, uncertainties continue to exist as to the tax status of non-resident taxpayers.\(^{408}\) The Schumacker doctrine (no. 35) indeed, according to which the personal and family circumstances of a non-resident worker must be taken into account by the State of source when he derives a significant part of his overall income in that State, seems clear as to its principle but appears more difficult to implement in practice. As “Community law contains no specific requirement with regards the way in which [Member States] must take into account [these] personal and family circumstances …, except that the conditions governing the way in which [this Member State ] takes those circumstances into account must not constitute discrimination, either direct or indirect, on grounds of nationality, or an obstacle to the exercise of a fundamental freedom guaranteed by the Treaty”\(^{409}\), the Court has not derived from the Treaty any obligation for Member States to generally adopt the same tax system for residents and non-residents. There is thus need for initiatives towards better coordination between Member States.

2. Adoption of tax incentives

The area of tax incentives is often related to the prohibition of State aid (Articles 87 and 88 EC)\(^{410}\). However, the EC freedoms as interpreted by the Court can also be seen as limitations to the power of the Member States to freely define the scope of application of such incentives. In fact, tax incentives may not be used as tools to favour domestic operations and transactions to the detriment of cross-border ones. This principle is applicable to all kinds of taxes, including inheritance and gift taxes, and, within the scope of application of income taxes, to every type of incentives. It should be recalled that tax systems as a whole are apt and used to operate as general incentives (determining when such systems become harmful tax competition is a politically highly controversial problem).

As to individuals, Member States willing to encourage the acquisition of housing (Commission v Sweden and v Portugal, no. 47) or of shares (Weidert-Paulus, no. 121), or to foster the transmission of family enterprises (Geurts and Vogten, no. 123), the education of the youth (Schwarz/Gootjes-Schwarz, no. 80) or the constitution of private pensions (amongst others, Commission v Denmark, no. 42) are bound to cover all intra-EU situations.

As to legal persons, the tax treatment of foreign charities by Member States is also under tight scrutiny of the Commission: infringement procedures have been launched against Belgium, Ireland, Poland (which complied) and the United Kingdom\(^{411}\).

The application of the EC freedoms may certainly entail serious financial consequences for the Member States or even for the federal and local bodies in the carrying out of sensitive national policies such as housing and education. As seen in the implementation of the Court’s case-law by Member States, the costs of the extension of beneficial tax regimes to all EU residents, which would be the most logical manner to comply with the EC Treaty could lead on the contrary to the abolition of those tax incentives even within the domestic context, which would result in an overall worsening of the taxpayers’ situation.

\(^{409}\) De Groot, para. 115.

\(^{411}\) See Commission Press Releases IP/06/1879 of 21 December 2006 (Belgium), IP/06/1408 of 17 October 2006 (Ireland and Poland) and IP/06/964 of 10 July 2006, (United Kingdom).
Moreover, from the Member States’ prospective, this limits the option for the deployment of national policies. In order to avoid such an undesirable result, better coordination at the EU level seems appropriate.

142. Concerning company taxation, national tax incentives for research and development have been examined by the Court (Baxter, no. 63, Laboratoires Fournier, no. 81). This area is particularly important as regards the EU objectives of the Lisbon agenda. Recommendations on an improved EU coordination, both concerning the EC freedoms and the prohibition of State aid, have already been issued by the Commission in a Communication, which also synthesised the Court’s case-law. Nevertheless, there might be further room for European coordination in that field.

3. Fight against tax evasion and fraud

143. Another sensitive issue in the area of direct taxation concerns the competence of the Member States to adopt anti-abuse rules that aim specifically at fighting cross-border tax avoidance or fraud. The notion of “anti-abuse rules” is very wide. Anti-abuse rules generally limit the incentives for economic operators to establish themselves in or to use foreign structures situated in low taxing jurisdictions; such measures thus often conflict with the freedom of establishment.

144. It follows from the Court’s case-law that anti-avoidance mechanisms that restrict movements and transactions between Member States are often incompatible with the EC Treaty. For example, an intra-EU transfer of residence may not trigger specific actual tax liability in the State of origin, such as a tax of unrealized capital gains (de Lasteyrie, no. 129, N., no. 130).

145. As to corporate taxation, CFC and thin capitalization provisions applicable only to companies established in other Member States constitute a breach of the freedom of establishment, whatever the effective level of taxation existing in those Member States. They could however remain in force only insofar as they target “wholly artificial arrangements intended to escape the national tax normally payable” (Cadbury Schweppes, no. 73; Thin Cap, no. 96). The principles of the Internal market require that (genuine) economic activities could be carried out on the entire territory of the EC as if it were a single market. However, one must not forget that differences in taxation on the same income are in themselves restrictions to a genuine Internal market. Nevertheless, EC freedoms do not guarantee to residents of a Member State the right to benefit from the lower taxation in other Member States without becoming residents there.

412 See for instance, outside the tax area, how the Court’s decision impeding the Austrian universities to limit the benefit of free education to Austrian nationals has resulted in the increasing of the tuition fees for all students, whether Austrian or EU nationals (ECJ, 7 July 2005, Case C-147/03. Commission v Austria. ECR, I-5969). Similar problems exist in the French-speaking part of Belgium. However, the Commission seems to have partly accepted the Member States justifications to these restrictions, at least in the medical sector. See Commission Press Releases IP/07/1788 of 28 November 2007 and IP/07/76 of 24 January 2007.

413 COM (2006) 728. On the present situation in the EU Member and some third countries, see the IBFD study “Tax treatment of research and development expenses”, Dec. 2004, on the DG TAXUD website (see fn 17).

414 For example, Controlled Foreign Corporations (CFC) rules, adopted by most of the Member States, mitigate the risk that their residents, whether natural or corporate persons, use corporations established in other States in order to reduce their tax liability in their State of residence. Such rules have as a common characteristic to subject an income earned by the CFC in the hands of the shareholder as if it were a distributed dividend. See Malherbe, J., de Monès, S. Jacobs, F., Silvestri, A., et al., “Controlled Foreign Corporations in the EU after the Cadbury-Schweppes”, 36 Tax Management International Journal, 2007, p. 607.
The State of residence is thus allowed to introduce mechanisms targeted at avoiding that, by pretending to exercise their right under EC law, resident taxpayers substantially diminish their tax burden in comparison with taxpayers who have not entered into cross-border activities (Columbus Container, no. 74).

146. These anti-avoidance mechanisms specifically applicable to cross-border situations are to be distinguished from measures taken by Member States in favour of resident taxpayers but excluding cross-border situations from their scope. Such restrictions of tax advantages to internal situations certainly constitute a difference of treatment but could nevertheless be justified by the “safeguarding of the balanced allocation of the power to impose taxes between Member States and the prevention of tax avoidance” (Oy AA, no. 66). Indeed, EC law cannot be interpreted as granting (corporate) taxpayers the right to freely decide in which Member State they ought to be taxed. In harmonized direct tax areas, anti-abuse provisions also enable, in a similar manner, Member States to restrict the benefits of the (favourable) tax regime laid down by the Directives.415

147. On the contrary, according to the Court, Member States remain free to adopt anti-avoidance mechanisms limiting the use of foreign structures located in third countries, since the freedom of establishment does not apply outside the territory of the EU, and the hypothetic restrictive effect of such mechanisms on the free movement of capital has often been considered by the Court as an “unavoidable consequence of the restriction of the freedom of establishment” (Lasertec, no.97; Thin Cap GLO, no. 96 and Fidium Finanz416). Similarly, it seems that Member States are allowed to take measures to retain their taxing rights (on the basis of nationality) in the case of transfer of residence to a third country fiscally more attractive (Van Hilten–Van der Heijden, no. 33). Nevertheless, the free movement of capital (Article 56 EC) applies in relation with third countries even if the Court seems to accept broader justifications to restrictions in relation with third States (A).

148. As the Commission pointed out in a recent Communication, coordination between Member States in that area is necessary, not only for exit taxes, but for anti-abuse measures in general.417 In an intra-Community context, unilateral approaches could even worsen the overall situation of taxpayers, for instance in cases where a Member State, in order to formally comply with the non discrimination principle, instead of renegotiating its DTCs, pretends to extend an anti-abuse rule to purely domestic situations (as, for example, Germany did after Lankhorst-Hohorst, no. 95). Moreover, the possible application of Article 56 EC in relation to third countries together with the risk that a lack of coordination would erode the tax base of the Member States could foster the need for better coordination.

4. Transfer of taxing powers to regional and local authorities

149. The decentralization processes in some Member States, like Spain, Italy or Belgium, may have unexpected consequences. In these States rather important autonomous powers have been transferred to regional or even local authorities.

415 According to some academics, these anti-abuse provisions are redundant with the justifications to the restrictions to the EC freedoms as interpreted by the ECJ. For example, on the Merger Directive and redundancy, see Terra/Wattel (2005), p. 571.
416 ECJ, 3 October 2006, Case 452/04, Fidium Finanz, ECR I- 9521.
In order to allow these authorities to properly exercise their powers, financial means have also been transferred, among which, besides conditional and unconditional direct financial transfers, also tax legislative powers and the corresponding tax revenues. These taxing powers are also used as tools to implement regional or local policies, i.e. as economic instruments to stimulate investments, activity and employment.

150. However, on the one hand, in the area of direct taxation, i.e. personal and corporate income taxes, the transfer of important tax powers to local and regional bodies raises serious issues of compatibility with the EC State aid regime (Articles 87 and 88 EC), the main issue being their potentially selective (i.e. limited to certain undertakings) character 418.

151. On the other hand, these transfers could render it necessary to set up intra-State apportionment criteria as to the delimitation of these “new” tax competences and to create a concept of regional or local residence. In a purely national context, these criteria would be used to –lawfully- “discriminate” between regional or local residents. This would be seen as a normal consequence of the political and constitutional choice made by the authorities of the Member State to adopt a federal or decentralized structure, which inevitably leads to the application of different rules to different parts of the country.

152. However, in the light of Geurts and Vogten (no. 123)419, it is still unclear whether the application of EC law could jeopardize the very reason why these taxing powers have been transferred to intra-State bodies, i.e. the possibility to develop autonomous policies only in respect of a part of the national territory 420. The question needs to be put whether the decentralization processes in some Member States are compatible with a greater approximation or coordination of the national tax systems, not only from a political point of view, but also from a purely legal perspective. As the Court stated, EC law requires indeed a uniform application of its provisions by the Members States, which cannot be hindered by administrative or even constitutional obstacles due to the institutional structure of the Member States421.

B. ALLOCATION OF TAXING POWERS BETWEEN MEMBER STATES

153. Not only does the Court’s case law affect the tax treatment by a Member State of situations and types of incomes that fall under its competences, but it also obliges the Member States to “look at the broader picture”, by taking into account the manner in which other Member States exercise their tax powers, and in some cases, to take active measures to avoid the negative consequences arising from the simultaneous application of tax rules of two or more national tax systems. In this perspective, it is not surprising that EC law also affects the legal instruments used by the Members States to allocate taxing powers between themselves, i.e. double taxation conventions. However, foreign tax law systems/developments are normally not discussed when fiscal bills are presented or debated. Insofar a (preferably common) code of conduct adopted by national parliaments would be useful with the aim of explicitly addressing the impact of proposed measures on relations with other States and in particular on the existing DTCs.

418 On fiscal State aid, see ECJ, Case C-88/03 (fn 30) and Di Bucci, V., “Direct taxation – state aid in form of fiscal measures”, in Sanchez Rydelski, M. (ed.), The EC State Aid Regime Distortive Effects of State Aid on Trade Competition & Trade, London, Cameron May, 2006, p. 73.
419 See also the Opinion of AG Saggio of 1 July 1999 in the joined Cases C-400/97, C-401/97 and C-402/97, Guipúzcoa e.a., ECR I-1073.
421 See for example ECJ, 4 May 2005, Case C-335/04, Commission v Austria, para. 9.
1. EC Treaty freedoms as limits of the Member States treaty making power in respect of double taxation conventions

154. DTCs are part of the national law of the Member State for the purpose of the application of EC law. Beside general provisions about their application and general definitions, DTCs mainly provide for “distributive rules” sharing the taxing power between the Contracting States by limiting their respective taxing rights towards each other with a view of avoiding double taxation. When this distribution is not exclusive, additional provisions in order to eliminate double taxation by means of exemption or tax credit are introduced (Article 23 of the OECD Model Convention). Since these conventions allocate taxing powers and thus (potential) revenue between States, incompatibilities between some of their provisions and EC law can modify the extension of these taxing rights as regards certain types of income and thus modify the balance negotiated by the contracting States.

155. As decided in the Saint-Gobain case (no. 59 and 110), “Member States are at liberty, in the framework of [double taxation conventions], to determine the connecting factors for the purposes of allocating powers of taxation...”\textsuperscript{422}. In this allocation, it is not unreasonable for the Member States to base their agreements on international practice and the model convention drawn up by the OECD, so that, as these rules allow different options, the connecting factor may be different for various types in the same class of income\textsuperscript{423}.

156. However, when it comes to exercising the allocated jurisdiction thus confirmed, Member States “may not disregard Community rules”\textsuperscript{424} and, more particularly, must respect the principle of national treatment of nationals of other Member States and of their own nationals who exercise the freedoms guaranteed by the Treaty\textsuperscript{425}. According to the national treatment principle, a Member State which is party to a DTC, even signed with a third country, is required to grant to permanent establishments of non-resident companies the benefits provided for by that DTC under the same conditions as those which apply to resident companies. This was applied, for instance, to an exemption of dividends (Saint-Gobain)\textsuperscript{426}.

157. The fact that, in allocating powers of taxation among themselves, Member States choose various connecting factors “cannot in itself constitute discrimination prohibited by Community law”\textsuperscript{427}.

158. The Court is concerned by results. The Member States thus have the choice as to the methods, but must achieve elimination of any restriction of an EC freedom. Notably, they must permit the taxpayers in the States concerned to be certain that, as the end result, all their personal and family circumstances will be duly taken into account, irrespective of how those Member States have allocated that obligation amongst themselves in DTCs\textsuperscript{428}. If different systems of taxation apply to residents and non-residents because of a DTC, the Court, rather than to reject the differentiation altogether, mandated the national court to look at the result so as to make sure that non-resident shareholders are not treated less favourably than resident shareholders\textsuperscript{429}.

\textsuperscript{422}Saint-Gobain, para. 56; Gilly, paras 24 and 30; Denkavit Internationaal, para. 43.
\textsuperscript{423}Gilly, para. 31.
\textsuperscript{424}Saint-Gobain, para. 58 ; De Groot, para. 94.
\textsuperscript{425}De Groot, para. 94 ; Saint-Gobain, paras. 57-58.
\textsuperscript{426}Saint-Gobain, para. 59.
\textsuperscript{427}Gilly, para. 53.
\textsuperscript{428}De Groot, para. 101.
\textsuperscript{429}Bouanich, para. 56.
Concerning the access to tax advantages provided in bilateral conventions, a question not yet treated by the Court is whether under free provision of services or free movement of capital EU taxpayers could be entitled to such benefits even if they are not resident (or have a permanent establishment) in one of the Member States that are party to the convention, i.e. their only connecting factor with one of these States is the fact that they have invested or performed a service there.

2. Existence of a DTC as a limit to EC Treaty freedoms

Another question regards the possibility for a Member State to invoke a DTC in order to justify a difference of treatment which otherwise would infringe EC law. Since *Avoir fiscal* (no. 53), the Court has generally ruled that the freedom of establishment is unconditional and cannot be limited by a tax treaty with another Member State. DTCs could neither hinder the application of secondary legislation, as the Court ruled in *Athinaïki Zythopoiía* (no. 22), concerning the Parent-Subsidiary Directive, save for the exceptions provided by the legislation itself (*Océ van der Grinten* no. 22).

However, the Court’s case-law concerning the taxation of cross-border dividends seems to mitigate this view. In *ACT Class IV* (no.107) for instance, the Court said that a Member State does not infringe EU law if, in a DTC, it extends its tax credit for residents to non-resident recipients of dividends and at the same time imposes a withholding on the amount of the dividend and grants a credit. The reason was that as the State of source is not obliged to grant the credit to non-residents, it may also vary its treaty policy. Moreover, according to *Amurta* (no. 103) and *Denkavit Internationaal* (no. 102) a withholding tax on dividends in the source Member State provided by a DTC, even though found discriminatory because dividends paid to a domestic shareholder are not subject thereto, could be considered permissible if the DTC which authorizes it also organizes a tax credit in the residence Member State, provided that the parent company is effectively able to set off the tax in that other Member State so that the withholding tax is neutralized. Thus, in some situations, the State of source becomes dependent on how the State of residence exercises its taxing power.

Nevertheless, the Court pointed out that it would be sufficient for the withholding tax to be considered compatible with EU law if the tax credit was granted unilaterally by the Member State of residence.

---

430 *Avoir fiscal*, para. 26. Furthermore, freedom of establishment does not permit Member States to subject those rights to a condition of reciprocity imposed for the purpose of obtaining corresponding advantages in other Member States. On anti abuse-rule, in the *Thin Cap Group litigation* case (fn 45), the ECJ found that the fact that DTCs admitted the principle and organized the effect of the British rules on re-characterization of interest in dividends was not sufficient to prevent any criticism: it found that the United Kingdom had not demonstrated that any increase of tax in the source Member State was offset by a reduction in the residence Member State. It accordingly admitted the system only to the extent that it applied to purely artificial arrangements and admitted without undue administrative burden evidence to the contrary.

431 *Athinaïki Zythopoiía*, para. 32 “... the rights conferred on economic operators by ... the Directive are unconditional and a Member State cannot make their observance subject to an agreement concluded with another Member State.”

432 *Océ van der Grinten*, paras. 84-89.

433 *Denkavit Internationaal*.

434 *Amurta*.

435 *Amurta*, para. 78.
Moreover, the State of source cannot justify the withholding on the grounds that “in accordance with the principles laid down under international tax law and as the [Bilateral Double Tax] Convention provides, it is for the State in which the taxpayer is resident, and not for the State in which the taxed income has its source, to rectify the effects of double taxation”\textsuperscript{436}. This judgement comes closer to a two-country-approach, by which the legal assessment is based not only on the situation in one State, but also by taking into account the effects in another Member State.

163. Conversely, as the Court stated in \textit{Elisa}\textsuperscript{437}, the absence of applicable DTC provisions, in particular as to the exchange of information, between the State of source and the State of residence could not in itself justify the non-respect of EC Law.

164. Thus, according to the Court’s case-law, a DTC as such is no justification for restricting the EC Treaty freedoms. However, a restriction in one Member State of a freedom may be admitted if its effects are neutralized by a DTC which produces compensating effects in the other Member State. Nevertheless, uncertainties remain as to issues that have not (yet) been addressed by the Court, in particular in situations involving more than two (Member) States, the so-called \textbf{polyangular situations}\textsuperscript{438}.

3. EC Treaty freedoms as intra-Community most favoured nation clauses

165. Could a Member State grant in a DTC certain benefits to residents of one Member State, while in another DTC denying the same benefit to the residents of the other Member State? In the \textit{D}, case (no. 49) it was asked whether the EC freedoms could have the same effect as a \textbf{most-favoured nation clause} and extend to all EU-residents the advantages granted by a Member State on a bilateral basis to residents of another Member State. The Court has decided that a bilateral DTC inherently applies to the residents of the two Member States concerned so that residents of a third Member State were not in the same situation; it found that the benefit at stake was not separable from the remainder of the Convention, but was an integral part thereof and contributed to its overall balance\textsuperscript{439}. In \textit{ACT CLASS IV}, the Court came to the same conclusion after scrutinizing DTCs made by the United Kingdom with other Member States, of which certain granted a tax credit and others did not: it found that this difference was not discriminatory but “by contributing to the overall balance of the DTCs in question, were an integral part of them”\textsuperscript{440}.

\textsuperscript{436} Denkavit International, para. 51. Previously, the ECJ had, in De Groot (para. 100) in what seems to be an \textit{obiter dictum}, considered that a Member State’s legislation could limit deductions based on the taxpayer’s personal circumstances and thus encroach on a freedom provided it finds, in the absence of a DTC, that the other Member State unilaterally grants advantages based on such personal circumstances.

\textsuperscript{437} ECJ, 11 October 2007, Case C-451/2005, Européenne et Luxembourgeoise d’Investissement SA (ELISA) v Directeur général des impôts, Ministère public.

\textsuperscript{438} Pistone, P., “Tax Treaties and the Internal Market in the New European Scenario”, \textit{Intertax}, 2007, p. 75; see also Workshop on “EC Law and Tax Treaties” organized by the EU Commission in Brussels on 5 July 2005, available on the DG TAXUD website (see fn 17).

\textsuperscript{439} Numerous authors have criticized the Court’s decision and reasoning. See a.o. Pistone, P., “National treatment for all non-resident EU nationals : looking beyond the D decision”, \textit{Intertax}, 2005, p. 412 ; Schuch, J., "Critical notes on the European Court of Justice's D case decision on most-favoured-nation treatment under tax treaties", \textit{EC Tax Rev.}, 2006 p. 6 and the quoted doctrine ; van Thiel, S., “Why the ECJ should interpret directly applicable European law as a right to intra-Community most-favoured-nation treatment”, \textit{Eur. Tax.}, 2007, p. 263 (Part 1) and p. 314 (Part 2) and “A slip of the European Court in the D case (C-376/03): denial of the most-favoured-nation treatment because of absence of similarity”, \textit{Intertax}, 2005, p. 454.

\textsuperscript{440} \textit{ACT Class IV}, para. 90.
The issue whether a benefit is separable from the rest of the DTC or not thus appears to be a factual issue to be decided on a case-by-case basis, so that there remains the possibility to invoke some kind of most favoured nation treatment if the benefit is found to be separable.

166. In practice, that case-law allows a Member State to reduce the withholding tax on dividends or interest to a level varying according to the contracting Member State. A dividend paid from Member State A to Member State X might thus be charged at 10% while the same dividend paid to Member State Y would be charged at 5 or 0%.

167. The case-law on DTCs leaves many questions unresolved, which causes uncertainties from the point of view of the taxpayers and of the Member States. The Court’s contribution to the creation of a “European international tax law”, could nevertheless open a path towards a more coherent web of DTCs. A CCCTB would automatically eliminate this problem for the companies falling within its scope of application.

C. AVOIDANCE OF DOUBLE TAXATION WITHIN THE EU

168. According to Saint-Gobain, EU law applies to double taxation conventions, at least as far as the exercise of the power of taxation so allocated by convention is concerned, obliging the EU contracting country to grant national treatment by virtue of EU principles to EU non-residents. Another question is whether Member States are bound by EC law to conclude these conventions in order to remove international double taxation. International double taxation results from the simultaneous subjection to (at least) two different tax jurisdictions. Under international law, there is no obligation to eliminate or avoid international double taxation, even though such situation collides with the principle of taxpayers’ equality.

1. Avoidance of international - juridical - double taxation

169. International juridical double taxation occurs when two different States apply the same tax on the same tax base to the same taxable person.

170. According to the Court, double taxation may result from “from the exercise in parallel by two Member States of their fiscal sovereignty”. It is up to the Member States to conclude international conventions in order to prevent double taxation, since “Community law, in its current state ..., does not lay down any general criteria for the attribution of areas of competence between the Member States in relation to the elimination of double taxation within the Community” and since apart from the existing legislation, “no uniform or harmonization measure designed to eliminate double taxation has as yet been adopted at Community law level”.

171. This rather formalistic approach is not followed in other areas of Community law where situations of double taxation are likely to occur. In the VAT field, for example, where the present case-law of the ECJ exclusively deals with matters of interpretation of provisions of secondary legislation (Directive 2006/112/EC, replacing the former Sixth Directive), the Court considers that the avoidance of double taxation is an objective of the harmonization.

443 Saint-Gobain, para. 57-58.
445 See the second recital of the 8th VAT Directive.
According to the ECJ, double taxation infringes on the principle of fiscal neutrality inherent to the common system of VAT established by the Directives on the basis of Article 93 EC\textsuperscript{446}. In the area of \textit{social security}, which shows a number of questions parallel to those regarding taxation, the path chosen by the European legislator in order to implement the free movement of workers has been one of coordination and not harmonization (Art. 51 EC). As a consequence, national rules organizing the social security system remain – at least in theory – not affected by EC intervention, while the latter focuses more on “bridging the gaps” that could arise when people exercise their freedom of movement, i.e. move from one national social security system to another. An EC regulation has therefore replaced the existing bilateral conventions between the Member States. Double “taxation” in the form of the double payment of contributions is considered incompatible with the EC regulation, and in particular with the principle of the unicity of the applicable legislation. According to this principle, a person is always covered by one - and only one - national social security system, for which she pays contributions and from which she receives benefits.

\textbf{172.} Thus, there is a departure between some case-law of the Court in the field of social security or of VAT, which seems to point in the direction of condemning juridical double taxation, and direct tax, where such juridical double taxation has not yet been said to be prohibited. This departure might be connected with the fact that both in VAT and in social security secondary legislation has implemented the principles of the EC Treaty. Although a general obligation under European law to eliminate or avoid international double taxation has not yet been considered to stem from the Treaty by the ECJ, one can well argue that double taxation between Member States is unlawful as it compromises the Internal market, i.e. that double taxation is implicitly prohibited by the existence of the Internal market\textsuperscript{447}. This point of view can be reinforced by the abolition of Article 293 EC by the Treaty of Lisbon.

\textbf{2. Avoidance of economic double taxation}

\textbf{173.} In an international context, double taxation often occurs when a subsidiary in a country distributes dividends to its shareholders in another country. Within the EU, such double taxation between associated companies established in different Member States is eliminated through the application of the Parent-Subsidiary Directive within its (limited) scope. However, the Directive does not apply to dividends paid to non associated shareholder companies, to individual shareholders or to shareholders in third countries.

\textbf{174.} Outbound dividends are paid out of profits which have usually borne corporate tax at the level of the paying company. For the foreign shareholder receiving the dividend, it is treated as income having its source in the country of the paying company; under domestic law and DTCs, a withholding tax is often imposed by the source State upon payment to the foreign shareholders. When the source State grants a credit to resident shareholders in respect of dividends in order to compensate the corporate tax paid by the distributing company, it is not obliged to grant that credit to non-resident shareholders who are not subject to tax on dividends in that State\textsuperscript{448}.

\textsuperscript{446} ECJ, 27 September 2007, Case C-146/05, \textit{Albert Collée v Finanzamt Limburg an der Lahn}, para. 23; 27 September 2007, Case C-409/04, \textit{Teleos e.a.}, paras. 24 and 25.

\textsuperscript{448} \textit{ACT Group Litigation}. Cp. with \textit{Fokus Bank}. Nevertheless, in the case of intra-group dividends, if, upon distribution, part of the corporation tax of the distributing company is due in the form of an advance corporation tax and if a domestic parent can avoid the levy of this charge by a group election, this possibility must also be available to a foreign parent established in another Member State (\textit{Metallgesellschaft/Hoechst}).
As regards withholding tax, the Treaty appears not to be respected when such a tax is levied on outbound dividends paid to non-residents whilst no significant taxation (withholding tax and participation exemption) applies to dividends distributed to resident companies or individuals.

This is not modified by the fact that a DTC would provide for a tax credit to be applied in the State of residence of the shareholder when a parent company is unable to set off tax in that other Member State in the manner provided for by that convention (Denkavit Internationaal, no. 102). The fact that the State of the receiving company unilaterally grants a full tax credit to avoid double taxation of dividends does not allow the State of the paying company to tax the dividends paid to non-resident shareholders although it prevents economic double taxation of dividends distributed in its territory (Amurta, no. 103). Such measures might however be justified by the application of a DTC (ACT Group Litigation, no. 107; Denkavit Internationaal, Amurta).

This could be seen as a departure from internationally accepted standards, which leave to the State of residence the duty to mitigate the double taxation that has arisen from the exercise by the source State of its tax sovereignty449, but it is in line with the system of the Parent-Subsidiary Directive450. If the source State cannot withhold tax on dividends paid to a foreign parent (often with foreign individual shareholders), why could it withhold tax on dividends paid directly to foreign individual shareholders?

175. As to inbound dividends, the tax system must not result in the penalization of shareholders who have invested in other Member States. Therefore, if the State of residence grants a tax credit in respect of corporation tax paid by its domestic company, it must extend that tax credit to corporate tax paid by companies in other Member States in respect of the dividends received (Manninen, no. 113; Meilicke, no. 114). It follows from Manninen that the tax credit must be based on the amount of corporate tax paid in the State of source451, so that the impact in terms of revenue for the State of the shareholder is directly dependent on the level of the tax rate in the State of source. It implies a budgetary shifting of revenue from one Member State to another; this situation may conceivably result in a claim of the crediting Member State against the other one.

When a Member State abolishes its tax credit system both for domestic and cross-border dividends, it complies with the requirement of non-discrimination provided for by the Treaty. However, this reinstatement of economic double taxation is detrimental to the good functioning of the Single market.

176. Similarly, if an exemption or a reduction of the tax rate (which economically also aims at remedying economic double taxation of dividends) applies to individual shareholders in respect of domestic dividends, it should be extended to dividends arising in other Member States (Verkooijen, no. 111; Baars, no. 122; Lenz, no. 112). According to the Court, if a Member State avoids economic double taxation in respect of domestic dividends, it must achieve the same result in respect of dividends from other Member States, but it may apply an exemption method to domestic dividends and a credit method to foreign dividends. However, disparities added to the application of the two methods should be eliminated (FII Group Litigation, no. 119).

---

451 Manninen, paras. 46, 53, 54.
Member States are therefore bound to avoid economic double taxation in cross-border situations insofar as they avoid economic double taxation in domestic situations. This implies extending the regime to outbound dividends which are taxed in the State of source and to inbound dividends in all cases, albeit under different methods. As a rule, except if a DTC applies, the assessment of the compatibility of the legislation at stake with EU law cannot be made dependent on the tax treatment of the same income in another Member State.

177. The case-law of the Court has in some circumstances as result to uphold situations in which cross-border transactions are taxed more heavily than domestic transactions. This was the case in Kerckhaert-Morres (no. 115) where the Court considered that, if a country taxes domestic and foreign dividends at the same rate, as Belgium does, it does not have to grant double tax relief in respect of a withholding tax levied abroad.

178. It is clear that the present situation is an obstacle to investment in foreign shares, as shown in some more or less successful systems of dual stock exchange listings coupled with “twin shares”452. Further EU coordination, in the spirit of the Commission Communications453, or even harmonization in the area of individual dividend taxation would help opening up the financial markets. Furthermore, these disadvantages could burden originally domestic shareholders who become foreign shareholders by virtue of cross-border mergers or who lose the benefit of the Parent-Subsidiary Directive because their entrepreneurial investment is diluted to become a mere portfolio investment due to a take-over by a large undertaking.

3. Choice between capital export and import neutrality

179. Taxation of international activities raises the question of the division of taxes on capital and income amongst States. Traditionally, it is suggested that these questions must be solved by reference to the principles of equity and economic efficiency454, which must be combined with the international tax principles according to which the State of source has jurisdiction to tax income or capital having its source on its territory while the State of residence has jurisdiction to tax the worldwide income or capital of its residents if it so wishes455.

180. Equity relates to the idea of an equivalent treatment between categories of taxpayers. In an international context, equity can be considered from the viewpoint of the State of residence or of the State of source. The foreign income or capital must be taxed at the level of the State of residence or of the State of source. Economic efficiency relates to the optimal allocation of factors of production resulting in the highest possible productivity. Both equity and economic efficiency entail eliminating or reducing international double taxation.

452 It is unfavourable for a Belgian investor to receive Dutch-source dividends and conversely. When a Dutch and a Belgian banks merged into “Fortis”, they devised a sophisticated system, which obviously only works for Belgian and Dutch investors and immediately shows its limitations: “The Twinned Share Principle of Fortis is truly unique. It implies that a single unit represents a share in two legal entities, each with a different nationality. Shareholders have voting rights in both parent companies and may choose to receive a wholly Belgian-sourced or a wholly Dutch-sourced dividend” (http://www.fortis.com/governance/media/pdf/fortis_governance_statement_UK.pdf, p. 13). The Belgian-French bank “Dexia” had a similar system, but abandoned it.

455 Worldwide taxation is not mandatory to the State of residence that can choose to tax only the territorial income or capital (as for example France as regards corporate income tax).
Equity in the State of residence means that all taxpayers with the same amount of income (or capital) pay the same amount of tax wherever their income originates from. This “capital export neutrality” (CEN) is reached by worldwide taxation combined with the imputation of taxes paid abroad. On the contrary, equity viewed from the State of investment (or State of source) supposes that investors of all origins are treated in a same way in the State of investment and that foreign investments bear the same level of taxation in the country of investment as local ones. Reaching that “capital import neutrality” (CIN) requires the State of residence to exempt foreign income.

181. Traditionally, CEN is presented as economically more efficient than CIN. This postulate is questionable. Imputation systems (CEN) are dependent on the level of taxation in the State of source. When this level is higher than in the State of residence, the latter has to accept the imputation of an amount of taxes higher than the tax it raises on the foreign income. Indirectly, the State of residence subsidizes the State of source while the State of source could have an incentive to increase its tax rates; this would be economically inefficient.

In order to avoid such subsidizing, some States of residence limit the imputation of the foreign taxes to the amount of their taxes relating to the foreign income (so-called “ordinary tax credit”). This increases the total tax burden on the foreign source income in all cases where the rate is higher in the source country than in the State of residence. This also obviates CEN which aims at taxing at the same level foreign and domestic income. Limited CEN leads to restrictions to investments in countries having higher tax rates and thus to inefficient allocation of resources.

182. It must also be noted that when the foreign rate is higher than the one in the State of residence, no taxation occurs in the latter, the tax revenue being wholly allocated to the source country. This has the same effect as a CIN system. In such conditions, investors have an incentive to operate through subsidiaries so as to deter taxation. On the contrary, lower rates in the State of source allow the State of residence to “recover” a part of the total tax burden. In other words, from a pure tax point of view, there is no interest for investors from a CEN State to invest in a lower taxing country.

183. From the viewpoint of the State of residence, CEN has as advantages an equal treatment of domestic and foreign investments income, an increase of revenue in case of lower taxation in the State of source, and a disincentive effect for investors to invest abroad when the tax rates are higher in the foreign country.

As regards CIN, it is argued that this system necessarily leads to territoriality, i.e. to taxation by the State of residence of the sole income or capital located in its territory; in that view, foreign income or capital as well as foreign losses would be outside its tax jurisdiction. This leads to hindering foreign investments in favour of investments in the State of residence, thus to possible economic inefficiency. From a systemic point of view, it is doubtful whether a territorial system is equivalent to a worldwide taxation system with exemption of the foreign income.

456 Cf. a.o. R. and P. Musgrave (1986). This postulate has founded the international tax policy of the USA.
Worldwide taxation supposes the integration of the foreign result, positive as well as negative; the exemption aims at eliminating the double taxation, thus deals only with positive foreign results. Technically, there is no obstacle to combine offsetting foreign losses with a “recapture” mechanism.

184. A correct comparison between CEN and CIN should take account of external elements such as the costs of infrastructure financed by taxes (the level of which relates to the level of taxation) or the redistributive effect of the tax system. Under efficiency analysis, taxes are considered as a cost. However, the portion of tax revenues used for redistributive purposes cannot as such be treated as a cost. Redistribution should be reflected in the quality of life of the country which in turn has an impact on the return on investment opportunities. CEN in this context appears to be inefficient as it discourages investments in higher tax rates countries and fails to redistribute taxes to all individuals who benefit from infrastructure costs and redistribution.

185. It has often been asked whether the Court’s case-law serves better the purpose of either one of the two objectives. Since CEN and CIN only highlight certain characteristics of systems aiming at eliminating double taxation and since the Court has decided that prevention of double taxation was not a taxpayer’s right, the case-law can by definition not further one system rather that the other. The Court checks domestic tax laws for discrimination, not for economic efficiency in preventing double taxation. Consequently, the Court limits itself, whatever the system used in a Member State or selected in a DTC between Member States, to check its compatibility with the fundamental freedoms. It is true that some of the decisions of the Court might be read as encouraging CEN or CIN, depending on the cases. As an example, the Manninen (no. 113) doctrine induces CEN when obliging the State of residence to grant a tax credit corresponding to the amount of the foreign tax; as a reaction, various Member States have abandoned the credit relief which they applied only to domestic dividends and grant an exemption or reduction both for domestic and EU dividends, which indirectly favours CIN. In this sense, the Court contributed to the disappearance in the Union of imputation systems. However, this disappearance is a logical consequence of the Court’s case-law applying non-discrimination provisions.

458 When taxes are used for infrastructure costs, it can be argued that taxation should occur in the place where investment costs are incurred, so favouring CIN. When calculating efficiency in CEN, additional costs incurred by investors in a low tax country in order to compensate lesser infrastructures finally reduce the after-tax return on such investments, with the consequence that investors will prefer not to invest in that country. Suppose a rate of 40% in State of residence (SR) and 30% in State of source (SS). Suppose a pre-tax return of 10. The after-tax return is 6 both in case of investment in SR (10 – 40% = 6) or in SS ((10 – 30%) + (10 – 40% + 30%) = 6). If additional costs of 1 is incurred in SS, the pre-tax returns falls to 9, with an after-tax return of 5.4%, lower than the after-tax return of investment in SR. Under CIN, due to the absence of tax catching up in the State of residence, the same investment could remain attractive.

461 However, some authors have tried to assess the economical foundations of the Court’s case-law. Graetz and Warren (2006, p. 1253) find that “the ECJ’s non-discrimination jurisprudence reveals an impossible quest: to eliminate discrimination based on both the origin and the destination of economic activity” and that “this quest must fail in the absence of harmonized income tax rates and bases among EU Member States”. Similarly, Terra and Wattel (2005, p. 150) criticize the Court for applying an economic approach which equates branches and subsidiaries where measures taken by a Host State are at issue, and by contrast applying a legal approach, comparing foreign subsidiaries to resident subsidiaries when it examines measures taken by the State of Origin.
186. However, most of the case-law in the field of dividend taxation must be read as favouring “capital movement neutrality” from the perspective of non-discrimination principles. Considering, for example, the Denkavit Internationaal case (no. 102), where the State of source has to grant relief for withholding tax on outbound dividends, when such exemption is granted to internal dividends, it is hard to conclude to an application of CEN or CIN; what can only be said is that the solution chosen by the Court aims at avoiding international double taxation and thus favours free movement within the Internal market. Moreover, this capital movement neutrality should be achieved from the viewpoint of both the State of residence and of the State of source, which may seem logically and economically almost impossible to achieve without full harmonization of the national direct tax systems.

187. A predominance of either CEN or CIN cannot either be inferred from the case law of the Court in the field of compensation of losses. It seems that the Court, implicitly at least, considers that losses must be set off once and only once (Amid, no. 84; Marks & Spencer, no. 91). However, setting-off should occur in the first place in the country where losses are incurred; cross-border setting-off on income from the State of residence appears as a subsidiary solution where no setting-off is possible in the State of source (Marks & Spencer). This again shows a tendency to recognize that taxation must take place where the income accrues. This is not fully satisfactory as regards losses because territoriality appears to be economically inefficient and hindering foreign investments. An efficient Internal market would require immediate loss setting-off with an efficient recapture mechanism. Reluctance of Member States to grant such setting-off can be explained by the fact that doing so has a direct impact in terms of tax revenue.

188. As regards individuals, the Schumacker doctrine (no. 35) deserves specific attention: the State of source has to take into consideration personal and family circumstances of the non-resident receiving most of its taxable income in that State. That statement reinforces taxation at the place of source of income, thus CIN. However, this solution leads to disconnect the place where the taxes are paid and the place of residence where the taxpayer normally benefits from tax expenditures in infrastructures and redistribution. What should be reconsidered is not the solution of the Court, but rather the “distributive rule” itself granting jurisdiction to tax the sole taxable income to State of source.

189. The concepts of CEN and CIN are used to generally qualify situations that negatively affect the allocation of investment (and labor). They do not make a distinction according to the source of the distortions, which is actually the crucial question in order to assess whether a situation is compatible with the EC provisions prohibiting Member States to infringe EC freedoms. It appears from the case law that the Court generally focuses its analysis not on the overall situation of the taxpayer, which often involves the simultaneous application of different tax provisions of the same national system (like the corporate and personal income tax rules for individuals shareholders), and even of different national tax systems of Member States, but rather on the provisions of the legislation of the Member State at stake in the proceedings (including the applicable double taxation conventions). Such an approach is in line with the manner in which the freedom provisions are drafted in the EC Treaty. The EC freedoms are indeed prohibitions to the Member States taken individually to either discriminate or restrict.
For the application of EC law, the final results on the taxpayer’s situation are an element of lesser importance than the manner in which the rules of the single Member State involved in the proceedings are drafted and applied. In this prospect, the *Marks and Spencer* decision (no. 91), in which the Court made the acceptability of the restrictive UK rules dependent on the taking into account of losses incurred by a subsidiary in another Member State, looks more like an exception than like a new trend in the Court’s approach\(^{462}\).

### D. Relations Between Member States and Third Countries

190. As a rule, EC tax law only applies in an intra-Community context and thus should not influence the relations between Member States and third countries. However, exceptions exist. According to its wording, Article 56 EC on the free movement of capital and payments is applicable in this context, whereas the other Treaty freedoms may only indirectly affect direct tax matters in third country relations (*Saint-Gobain*, no. 59). As to secondary legislation, the regimes laid down by some directives have been extended, through EU-Member States joint agreements, to some third countries\(^{463}\).

191. Concerning the application of the free movement of capital to third countries residents or nationals, the Court seems reluctant to examine the free movement of capital issues as soon as it finds that another freedom is affected. In the *Holböck* judgement (no. 116), however, the Court recognized that the legislation at stake applied irrespectively of the percentage of the holding and – since the right of establishment was not applicable in relation to third countries – it scrutinized the legislation under the angle of Article 56 EC.\(^{464}\) The EC Treaty freedoms as interpreted by the Court apply only to EU nationals and if they were extended to non-EU nationals, the non-EU nationals concerned cannot be expected to behave reciprocally. This might be one reason because of which the Court for the time being did not pursue the line of the *Holböck* case and has refused in other cases to grant EU law protection to capital movements in third country situations\(^{465}\).

192. Nevertheless, the relations with third States in the field of direct taxation are certainly an area in which EU initiatives will have to be taken, due to the increasingly globalized economy. This subject has been under tight scrutiny from prominent authors during the recent years, and developments are expected. Amongst the issues at stake in this context - and thus the potential problems - one could quote the application of double taxation conventions signed with third countries to all EU residents, the right for the Member States to unilaterally extend the benefits of Community legislation in DTCs with third countries or the tax implications of the agreements signed by the European Community\(^{466}\).

---

\(^{463}\) It is the case for the Savings Directive (2003/48/CE), but also for the Parent-Subsidiary and the Interests–Royalties Directives: Bilateral Agreement II between the EU and Switzerland extends the exemption of WHT on dividends and interest in “parent-subsidiary” relations (as defined by the Agreement) between the EU and Switzerland (art. 15). See Pistone, P., *General Report* in Lang, M./Pistone, P., *The EU and Third Countries. Direct Taxation*, Vienna, Linde Verlag 2007, p. 20.

\(^{464}\) Nonetheless, the ECJ declared Austrian tax rules to comply with the freedom of capital since they were already in force on December 31, 1993 (see para. 41 of the judgement).

\(^{466}\) Lang, M., and Pistone, P.(ed.), *The EU and third countries : Direct Taxation*, Vienna, Linde Verlag, 2007 ; Lyal, R. “Free Movement of Capital and Non-Member Countries-Consequences for direct taxation” in Weber,
E. TAX TREATMENT OF EUROPEAN GROUPS OF COMPANIES (CONSOLIDATION)

193. In most cases, resident taxpayers are taxed on their worldwide income; France with its territorial corporate tax is a noteworthy exception. As regards international structuring of companies, a first point of attention is the possible choice between setting up a foreign branch or a subsidiary; a second point of attention, as regards more specifically foreign subsidiaries, is the possibility to take them into consideration for group consolidation. In this context, specific questions arise in loss situations.

194. As to permanent establishments, the Court held that enterprises having several branches in the same State were comparable with enterprises having foreign branches within the EU so that the off-setting of domestic losses against exempt profits of permanent establishments is in breach of the freedom of establishment as it leads to a higher tax burden. The controversial fact here is that the national law at hand provided for the compensation of losses on the foreign income, just as it was the case for a domestic situation. The difference lies in the fact that the compensation was made with an income that was not taxed in the State of residence, with the consequence of economic double taxation. Thus, first, beyond the comparability test, the Court correctly noticed the economic double taxation; second, the Court’s case-law indirectly leads to territoriality or “per country” method, as it implies that domestic losses cannot be set-off against foreign exempt profits and thus can only be set off against taxable (domestic) profits.

The reverse situation is pending before the Court: is it a breach of the freedom of establishment not to allow the off-setting of the losses of the foreign permanent establishment against domestic profits, whilst in pure domestic situations such compensation occurs, granting to the pure domestic company a “cash advantage” not available to the one acting cross-border?

195. The argument of “cash advantage” has also been put forward as regards group consolidation, i.e. compensation of losses between companies forming a group. The different treatment for tax purposes of losses incurred by a resident and a non-resident subsidiary amounts to a restriction of the freedom of establishment. The domestic group is at a “cash advantage” compared to the cross-border group as losses are immediately deductible, thus reducing the tax burden. However, such a restriction is justified. The Court dampened its statement by saying that the domestic rule went beyond what was necessary to attain the objective pursued, considering the fact that the non-resident subsidiary had exhausted all possibilities in its Member State of residence to deduct or carry forward its losses by itself or by a third party.

467 These terms must be construed here in a broad sense, independently of the technique applied for consolidation.

469 Due to exemption granted by DTCs.

471 Pending case C- 414/06, Lidl Belgium.
196. As a consequence, the State allowing consolidation has to take into account losses of foreign subsidiaries **only if and when all possibilities of carry-over have been exhausted abroad**. Thus, domestic and international groups are not in the same economic position as the first ones have an immediate “cash advantage” not available to the others. Similarly, structuring foreign investment through permanent establishments rather than subsidiaries allows an immediate loss offset and thus an immediate benefit of the “cash advantage”; branches and subsidiaries are no longer treated in the same way. The case-law also leads to paradoxical situations: the loss treatment in the State of consolidation will be closely linked to the loss compensation rules in the State of the subsidiary: the narrower the latter, the broader the former will have to be. This might lead Member States to limit their possibilities for loss carry-over which would hamper economic efficiency.

197. The consolidation perimeter is also a fundamental question to be considered. **ICI (no. 90) prohibits to subject domestic group relief to the condition that the group does not hold shareholdings in foreign, be it EU, subsidiaries. In Marks and Spencer (no. 91) the Court considered sub-subsidiaries of the UK parent company. In Oy AA (no. 66), the Court upheld a domestic rule refusing a domestic subsidiary to deduct a contribution to its distressed parent in another Member State. Cases are being referred to the Court concerning the availability of consolidation to sister subsidiaries in one Member State when the parent company is located in another Member State. Questions referred to the Court are growing in complexity.**

198. In the prospective of achieving the Internal market for multinational companies, **EU-wide consolidation is at the moment the most urgent issue to be considered.** This finding can be supported by the fact that several cross-border problems recently faced by the Court in its case-law, i.e. cross-border compensation of losses, transfer pricing issues, treatment of cross-border participation costs and exit taxes on transfers between associated companies, could be solved by the adoption of a consolidation mechanism at the EU-level. It is thus not surprising that the harmonization project launched by the Commission as to corporate taxation not only refers to a common tax base, but to a consolidated one.

---

472 It must be noted that the ECJ did not examine as such that comparison which however had been suggested to it.

473 Thus, if the State of the subsidiary provides for an unlimited carry-over of losses, the State of consolidation will hide behind the argument that “all possibilities have not been exhausted” as long as the subsidiary exists; on the contrary, if no carry-over is provided for by the State of the subsidiary, the other State will have to grant immediate relief.

474 Carry-over in time, in case of restructuring or change of control.

475 As it would increase the risk for enterprises in loss situation to face excessive tax burden (which can, in some cases amount to their total taxable income).
IV. LIMITS TO THE CASE-LAW METHOD AND NEED FOR LEGISLATIVE INITIATIVES: FINDINGS AND PROPOSALS

199. Any conclusions drawn on the influence of an ongoing process like the case-law of the Court on the direct tax systems of the Member States are necessarily incomplete and provisional. They can indeed only be based on the shifting sands of the judicial process, which resists any attempt to transform a shed of individual decisions into one or more general rules applicable to an indefinite number of situations.

200. However, it may be said that the –quite remarkable- development of the case-law of the Court in direct tax matters is a consequence of the –very original- Community framework as to the division of powers between Community institutions and Member States in this area. From an economic point of view, (direct) taxation is undoubtedly an essential tool to be used in order to achieve the political objective of the Internal market (Article 3 EC). From a legal perspective, it must be acknowledged that the Treaty –and this reflects the opinion of at least some of the Members States- does not explicitly organise the legislative EC competence for attaining the level of harmonization, approximation or coordination in direct taxation that would be required in order to remove the existing tax obstacles to intra-Community trade and industry.

201. The Court’s case-law thus originates in the incapability or unwillingness of the national direct tax systems to provide for adequate recognition of cross-border situations, i.e. to consider for tax purposes that extraneity cannot be regarded as a discriminating factor as such. As we have seen, the case-law of the Court has dealt with all sorts of situations. This is probably due to the most interesting feature of EC individual rights and freedoms, i.e. their open-endedness. There is indeed no restricting measure that cannot be caught by the EC fundamental freedoms. As to the judicial protection of European citizens and businesses, this is undoubtedly an improvement.

202. Nevertheless, the coin has another side which is uncertainty about the exact scope of application of those freedoms and unpredictability concerning the outcome of cases pending before the Court. Moreover, the Court always decides on the basis of an individual situation: the judgement depends thus on the facts that are presented before it and the only way to be sure that a similar but not identical situation will warrant the same decision is often to submit another question to the Court. For instance, one may see the limits of the case-law method when, on a technical distinction, similar CFC rules are condemned in Cadbury Schweppes (no. 73) and upheld in Columbus Container (no. 74).

203. In defence of the Court, it is always difficult to decide a case where no sufficiently precise (EC secondary) legislation has been enacted, and where the (Member States’) applicable legislation often pursues other objectives than the removal of the obstacles to the establishment of the Internal market, or – even worse- the applicable legislation should have the goal of remove such obstacle, like the DTCs, but merely organize the allocation of powers of taxation between two States, without regard to the situation of double taxation in the hands of the taxpayer476.

---

476 See for example the taxation of cross-border dividends under the DTC between France and Belgium.
204. However, there is no convincing argument to level a fundamental criticism of the Court’s attitude and to interpret the Treaty as denying the right for European taxpayers to seek remedy under the EC freedoms. The failed attempt by some Member States to limit the Court jurisdiction in direct tax matters is eloquent evidence that that interpretation cannot be followed.\textsuperscript{477}

205. It is also symptomatic that criticism on the Court has been going in both directions; some reproaching the Court not to sufficiently take into consideration the interests of the Member States, e.g. by further acknowledging the principles of territoriality of the tax systems or of fiscal cohesion, but others regretting the Court to be too reluctant to promote full implementation of the idea of Internal market in tax matters, e.g. by condemning double taxation or applying the most-favoured nation’s principle to Member States’ DTCs.\textsuperscript{478}

206. In this context, it is not surprising that implementation of the Court’s rulings varies amongst Member States, even at the level of domestic jurisdictions. Basically, facing a discriminatory situation, the domestic judge will grant the favourable treatment to the discriminated party, whilst the legislator has a broader choice. For example, after Marks & Spencer, recognizing the right for a consolidation of the trans-national losses within an EU group in certain circumstances, Member States have the choice to extend their consolidation regime to non-resident subsidiaries established on the EU territory or to do away with consolidation altogether. In this choice, of course, revenue consequences can be of paramount importance.\textsuperscript{479}

207. This difference in the implementation of the Court’s case-law among the Member States is not coherent with the idea underlying the role of the Court of Justice, which is to provide a uniform interpretation and application of EC law in all the Member States, as Article 10 EC requires. At this point, a comparison with the situation as to VAT, on the one hand, and social security, on the other hand, as to the role of the EC freedoms can be enlightening.

208. In VAT matters, the existence of a rather extensive and detailed set of harmonized rules in secondary legislation entails that the role of the economic freedoms contained in the EC Treaty (in this case the free movement of goods of articles 25 EC and 90 EC) is limited, although not irrelevant. These freedoms guide the interpretation of the provisions of the Directives. Moreover, they can potentially apply in case of loopholes in secondary legislation\textsuperscript{480} or to national indirect taxes that are not (yet) harmonized, like taxes on vehicles\textsuperscript{481}. The issue of the cases involving VAT is thus generally more predictable than in direct tax matters.

\textsuperscript{477} See the Memorandum presented by United Kingdom and Germany during the Intergovernmental Conference preceding the adoption of the Treaty of Amsterdam (1997).

\textsuperscript{479} Thömmes, O., 'Effect of ECJ decisions on budgets of EU Member States: EC law without mercy?', Intertax, 2005, p. 560.

\textsuperscript{480} ECJ, 5 May 1982, Case 15/81, Staatssecretaris van Financiën v Gaston Schul Douane-Expéditeur BV, ECR 1409; 21 May 1985. Case 47/84, Gaston Schul, ECR 1491; 6 July 1988, Case 127/86, Ministère public et Ministre des Finances du royaume de Belgique v Yves Ledoux, ECR 3741.

\textsuperscript{481} See e.g. ECR, 15 July 2004, Case C-365/02, Marie Lindfors, ECR I- 7183; Weigel (fn 81).
Notable exceptions where the role of the Court has been more creative deserve to be mentioned like the judgements on the compatibility of national taxes with the prohibition of turnover taxes having the same characteristics as the VAT\(^{482}\), and in a minor measure, on the compatibility of national anti-abuse provisions. In this latter case, it is thus not surprising that the same standards are applied by the Court both in direct and indirect taxation\(^ {483}\).

209. However, the path towards greater harmonization in direct taxation seems difficult and slow. The true obstacles are much more political than technical, juridical or economical. Nevertheless, the diversity of Member States tax systems, combined with the application of the EC freedoms by the Court, often lead to damaging consequences for the taxing powers of the Member States themselves, not to mention for the taxpayers.

210. Also social security could inspire the European legislator as to direct taxation, especially as to issues where both areas almost collide, and synchronization (i.e. the horizontal harmonization between two different areas of law) is urgently needed, like the treatment of frontier workers or of cross-border pensions\(^ {484}\). Nevertheless, the essential differences between social security and direct taxation make the hypothesis of a comprehensive EC regulation concerning the allocation of direct taxing powers between Members States very unlikely. In particular, the fact that powers as to social security are allocated by virtue of the coordination made by Reg. 1408/71 and soon by Reg. 883/2004, to one State exclusively greatly differs from the scope of the allocation of taxing powers, that is almost always shared between two or more States in cross-border situations\(^ {485}\). One reason could be that for the Member States affiliation to social security entails both revenues (contributions) and burdens (benefits), while subjectation to tax only consists in revenues. However, using different connecting factors may create deep injustice, since there unquestionably exists a certain “vases communicantes” effect: higher tax rates coincide with lower social security contribution rates and conversely. Moreover, EC regulation on social security only concerns physical persons, i.e. employed or self-employed workers and their family, while an hypothetical comprehensive EC direct tax regulation replacing the existing DTCs between Member States would also have to include legal persons into its scope of application.

211. The area of direct taxation, and in particular corporate taxation, is thus an area torn between non-intervention, coordination and harmonization.

212. Non-intervention is certainly the solution that leaves the most room to the Court. Again, it must be emphasized that it is not a room that the Court has itself created. In this prospective, the phrases “negative harmonization” or “negative integration” can be misleading, because harmonization implies that the “harmonizators” consciously decide to adopt and implement common rules in order to attain a common objective whilst there is no real integration between the national tax systems as a result of the EC judgements, since these systems continue to co-exist without looking alike.

\(^{482}\) Cf. Banca Popolare di Cremona (fn 42).
\(^{483}\) Cf. ECJ, 21 February 2006, Case C-255/02, Halifax plc, Leeds Permanent Development Services Ltd and County Wide Property Investments Ltd v Commissioners of Customs & Excise, ECR I-1609 (VAT); 21 February 2006, Case C-419/02, BUPA Hospitals Ltd and Goldsborough Developments Ltd v Commissioners of Customs & Excise, ECR I-1685 (VAT); Cadbury Schweppes (fn 224); Test Claimants in the Thin Cap Group Litigation (fn 45).
213. **Coordination** aims at allocating the power to tax between the Member States without interfering with their power to decide if and how the income allocated to them is to be taxed. Secondary legislation in this prospective would have the same objective as double taxation conventions between Member States, as it can be seen from the application of the existing Directives in direct tax matters (No. 22). As the Commission has shown in recent communications, better coordination could improve both the Member States’ and the taxpayers’ situations in critical areas, like cross border compensation of losses or exit taxes. Coordination can be achieved either by coordinated unilateral or bilateral (DTCs) measures taken by Member States, by multilateral instruments of international law (multilateral tax convention) or by secondary legislation based on article 94 EC. Several authors have proposed -and even drafted- a multilateral EC convention, but such proposals have never received much attention from the Member States. However, an instrument of secondary legislation would better fit into the institutional framework of the Internal market.

214. Finally, **harmonization** aims at adopting common principles or general rules at the European level and leaves the Member States the task to implement them in their national systems, in order to reach a certain level of uniformity and to remove the obstacles due to the disparity between the Member States’ legislations.

215. The theoretical distinction between harmonization and coordination is not always simple to draw in practice. Concerning for example the Parent Subsidiary Directive, it could be said that the Directive is an instrument of coordination since it allocates the power to tax to the State of the Subsidiary, who is then free to tax it according to its own national rules. However, from the Parent company’s State perspective, the Directive can be regarded as a harmonization tool because, by forcing exemption of a part of the corporate income, i.e. the income derived from subsidiaries located in other Member States, the Directive leads to the indirect result – by application of constitutional constraints and for reasons of economic policy – of exempting most of the intra-group flows of dividends, whether internal or cross-border.

216. The announced proposal on a **Common consolidated corporate tax base** clearly belongs to the harmonization instruments. Such a piece of legislation would certainly enhance European integration and limit the “creative” power of the ECJ. It would make the outcome of its judgements more predictable, and as the Commission already pointed out in 2004, “[a]t the same time, it would in many areas effectively reduce the risk that Member States’ tax laws are declared to be unlawful restrictions to the fundamental freedoms of the Treaty by the European Court of Justice”. Of course, it has to be borne in mind that the CCCTB, if adopted on an optional basis, would apply only –at least in a first phase- to a limited number of companies.

---

486 See the Commission framework Communication on coordination, COM (2006) 823. The abrogation of article 293 EC by the Treaty of Lisbon seems to put an end to the possibility of the intermediary solution between EC and international law chosen for the Arbitration Convention 90/436/EC, i.e., a multilateral instrument based on the EC Treaty but adopted by the Member states in the form of an international convention.

Even if all Member States would agree to join the project, it seems that the CCCTB would remain optional, which means that national systems would continue to govern the taxation of the companies that did not opt for the CCCTB regime.\(^{489}\) Moreover, as the failure of an early attempt to introduce a common imputation system of corporation taxes in the EC\(^{490}\) has shown, harmonization of corporate tax systems cannot be achieved without some kind of compensation mechanism in order to avoid improper shifting of tax revenues between Members States.

**217.** If harmonization of the corporate income taxes of the Member States falls into the scope of the Internal market, full harmonization of the national direct tax systems of the Member States (including thus personal income taxes) is neither practicable, nor necessary. **Personal income taxes** reflect indeed too many other policy objectives to be only seen as mere hindrances to the economic freedoms; their social, political and even environmental dimensions are also to be taken into due consideration.

**218.** Nevertheless, unjustified obstacles to the free movement of individuals could be removed without jeopardizing national policies in the fields of housing, education, protection of the family and the youth, environment, etc. An intermediate solution could be to separate the issues at stake and to harmonize the taxation of companies (CCCTB) and to coordinate, i.e. allocate the taxing powers in respect of, the taxation of income from work (and assimilated, like pensions) according to the same criteria as the ones used in social security, both instruments being under the Court’s jurisdiction. Intra-EU DTC would see their scope reduced to non-harmonized and non-coordinated categories of income (mostly income of physical persons from immovable property and from investment), where the Court would directly apply the EC Treaty freedoms.

**219.** Moreover, coordination or harmonization of direct tax provisions would also prevent Member States from unpleasant surprises as to revenue consequences of Court decisions. In various direct tax cases the question of limiting the judgements’ effects in time was subject to lively discussions by the AGs\(^{491}\) and academics\(^{492}\), since a retroactive effect of the decisions would have had severe economic repercussions in the Member State concerned. However, the Court seems to be careful in limiting time effects\(^{493}\).

\(^{489}\) However, considering the experience of the Parent-Subsidiary Directive, we think that the CCCTB will have a strong influence also on the domestic tax provisions of the Member States and that this will lead to a more thorough harmonization of the national corporate tax systems.

\(^{491}\) See Opinion of AG Geelhoed delivered on 6 April 2006 in Case C-446/04 Test Claimants in the FII Group Litigation, ECR I-11753, paras. 140-146; Opinions of AG Tizzano delivered on 10 November 2005 (paras. 31-63) and of AG Stix-Hackl delivered on 5 October 2006 (paras. 10-67), both in Case C-292/04 Meilicke (fn 354).

\(^{492}\) Furthermore, the conclusions of the two AGs in the IRAP case concerning indirect taxation are relevant for the economic consequences of ECJ decisions. See Opinions of AG Jacobs delivered on 17 March 2005, paras. 130-186, and of AG Stix-Hackl delivered on 14 March 2006, both in Case C-475/03 Banca Popolare di Cremona (fn 42).

\(^{493}\) The Court did so in a number of preliminary rulings regarding indirect taxation, e.g. Defrenne II or EKW, cases involving very large amounts of money. With regard to direct tax matters, for the time being the Court restrained from limiting time effects. See Test Claimants in the FII Group Litigation, paras. 221-225; Meilicke, paras. 32-37. In Banca Popolare di Cremona the Court decided that the tax in question was not contrary to the Directive so that it did not had to examine the question of time limits anymore.
220. Before the *Meilicke* (no. 114) decision for example, the German legislator was perfectly aware of the fact that the German imputation system was contrary to EC law as interpreted by the Court in *Manninen* (no. 115). Thus, it amended the time limits for potential refund claims. For the rest, Germany did not take proactive steps to amend its legislation but awaited the *Meilicke* decision and requested that the Court’s decision have either effect for the future or have effect for fiscal years after the year *Verkooyen* was decided. In fact, allowing Member States to continue to apply non-EC compatible legislation until a decision against their own national law was handed down creates an incentive for noncompliant behaviour. Severe economic consequences might represent the most effective motivation for Member States to render their tax provisions compatible with EC law.

221. In conclusion, the development of the Court’s case-law in direct tax matters is neither surprising, nor contrary to the objectives of the European process and to the balance of powers between European community and Member States. However, the case-law method has various limitations: it is slow, and years can lapse before a case reaches the Court and further years before a judgement finds its way into domestic legislation, years during which the Internal market suffers; it is expensive and leaves it to the taxpayer to fund the shaping of the law; it may even be said to be pervert, since it expects the taxpayers and not the Member States to promote the Community interest. But the main problem is that in the existing framework, it is inadequate: the Court only condemns discrimination and has explicitly declined to condemn double taxation, so that the case-law method would only be adequate if absence of discrimination in tax matters would suffice to remove obstacles to the Internal market, let alone to establish justice and efficiency in cross-border taxation throughout Europe.

222. This raises the question whether a more comprehensive scheme, such as harmonization of corporate taxation or any other EC instrument on the elimination of double taxation, would not effectively serve not only Community objectives, but also Member States’ interests. Member States, not to mention the taxpayers, are indeed not always able to predict with a sufficient degree of certainty which will be the outcome of the cases that concern them. Considering the financial consequences which breaches of EC law can entail for the Member States, including the reimbursement of undue taxes, harmonization may be preferred even for myopic reasons, even though the superior reasons remain that in the Internal market it is both unjust and inefficient to overtax cross-border situations.

---

495 The more radical solution to avoid any problems of EC compatibility of national corporate taxes would be their abolition, by taxing “corporate” income at the level of the shareholder. This was partially realized by the imputation system, which several Member States, like Germany and Finland, applied domestically but refused to extend to foreign corporation taxes (see *Meilicke* and *Manninen*). See Cerioni, L., “A hypothesis for radical tax reform in the European Union – The implication of the abolition of corporate income taxes”, *Eur. Tax.*, 2007, p. 377.

1. GLOSSARY

**Capital export neutrality:** Public concept describing the situation where investors are subject to the same level of taxes on capital or income regardless of the country in which income is earned. This principle is often illustrated by the credit method of relieving international double taxation.

**Capital import neutrality:** Public concept describing the situation where investors are subject to the same level of taxes on capital income regardless of whether they are made by a domestic or foreign investor. This principle is often illustrated by the exemption method of relieving international double taxation.

**Direct tax (as opposed to indirect taxes):** A tax, such as an income or property tax, levied directly on the taxpayer. Direct taxes are generally imposed on income, capital gains capital and net worth.

**Double taxation (juridical double taxation, economic double taxation, international double taxation):** Double taxation is traditionally divided into two kinds:

a. **Juridical double taxation:** it may be defined as the imposition of income taxes in two (or more) States on the same taxpayer in respect of the same taxable income or capital.

b. **Economic double taxation:** refers to situations where a same element of income is taxed in the hands of two or more different taxpayers. This is especially the case for dividends which are taxed initially at the level of the paying company and subsequently at the shareholder level.

c. **International double taxation:** refers to situations where taxes are imposed by two or several different States on the same or different taxpayers. International double taxation occurs, for example, when an individual resident in one State accrues income from its employment in another State: this income is taxable in both the State of residence and the State of source. International double taxation also occurs as regards dividends when the paying company and the shareholders are located in different States.

**Double taxation conventions:** agreements concluded under public international law to eliminate double taxation between Contracting States. They are in most cases bilateral but may also be multilateral involving more than two countries. Tax treaty rules are mainly “rules of limitation of law” whereby Contracting States accept to limit the content of their domestic tax law either by excluding application of provisions of their tax law or by obliging one or both States to grant a tax credit against their domestic law for taxes paid in the other State. Tax treaties mainly contain general provisions (definitions of concept, scope of application), so-called “distributive rules” allocating tax jurisdiction amongst Contracting States, completed by a provision on the methods for elimination of double taxation, and special provisions with regard to non-discrimination, mutual agreement procedure, exchange of information and administrative assistance, entry into force and termination of the agreement.

**Exemption method (see also imputation):** Method aiming at avoiding, unilaterally or under tax treaties, double taxation by excluding the foreign income from the tax basis in the State of residence. The exemption method puts investors from different countries in equal competitive conditions in the State of source.

---

**Fiscal sovereignty:** The fiscal sovereignty is the right for a State to exercise to the exclusion of any other State the tax functions of a State, including both a right to legislate so as to tax according to defined connecting factors and a right to enforce taxation. The right of enforcement is as a rule limited to the State territory. Usually, as regards the right to legislate in the field of income tax, connecting factors are the taxpayer residence or (more rarely) nationality. It is of international tax practice that the State of residence is allowed to tax the worldwide income of its residents (but it is not obliged to do so) while the jurisdiction to tax on non-residents is limited to income having their source within the territory.

**Imputation system or credit method (see also exemption):** Method aiming at preventing or partly eliminating double taxation in the State of residence through the grant of credit for taxes paid in the source State. Under a “full tax credit”, imputation on the tax in the State of residence is granted up to the full amount of tax paid in the State of source, with a possibility of refund or carry-over of the excess amount on the tax to be paid in the State of residence. Usually, the States’ practice limits the imputation of the foreign tax to the amount of tax in the State of residence relative to the foreign income (“ordinary credit”).

**Inbound dividend (as opposed to outbound dividend):** Dividends received by a shareholder A resident in a country A from a paying company B in the country B, considered for taxation from the viewpoint of the State of residence.

**Losses:** Although each country has its single definition, the term may broadly be defined as the excess of expenses (as broadly understood) over revenues for a period, or the excess of the cost of assets over the proceeds, if any, when the assets are sold or otherwise disposed of, or abandoned or destroyed.

**Outbound dividend:** Dividends paid by a company B in a Member State B to a foreign shareholder A in country A considered for taxation from the point of view of the State of source B.

**Permanent establishment:** This term is generally used to refer to a fixed place of business in a particular country through which the business of an enterprise is wholly or partly carried on and which is of a sufficient level to justify that country’s taxation.

**State of residence:** the State wherein the taxpayer has the strongest connection justifying taxation on his worldwide income or domestic-source income, and wherein its ability to pay has to be taken into consideration.

**State of source:** the State where a particular item of income is deemed to originate.

**Subsidiary company:** A company that is directly controlled by another company (the parent company). A foreign subsidiary of a company is a company resident outside the country of residence of the parent company.

**Residence principle of taxation (as connecting factor; opposed to nationality):** International principle according to which residents of a country are subject to tax on their worldwide income or domestic-source income. Indeed, contrary to the State of source which is prohibited to tax foreign income, the State of residence is allowed to tax either the worldwide income or the domestic-source income. Personal and family circumstances have to be taken into account in the State of residence applying worldwide taxation (ability to pay principle).

**Shareholder:** the owner of the shares of a company. Shareholders can be individuals or legal persons.
**Tax avoidance:** It implies that a taxpayer has arranged his affairs in such a way that his tax burden is less than it would otherwise have been, or that no tax is payable because of such arrangement. It refers to the reduction of tax liability by legal means. It has to be distinguished from tax evasion and tax fraud.

The scope of this term may vary from country to country, depending on attitudes of government, courts and public opinion.

**Tax evasion:** Illegally and intentional behaviour in order to escape payment of tax. Criminal penalties often accompany tax evasion.

**Tax fraud:** An intentional wrongdoing on the part of a taxpayer, with the specific purpose of evading a tax known or believed to be owing. Being a form of deliberate evasion of tax, legal sanctions may include civil or criminal penalties.

**Taxable income (gross income – net income; accrual basis – cash basis):** The elements of income which are deemed taxable. Valuation of these elements gives the “tax basis” on which the tax is calculated. The tax basis is usually represented by the “net income” composed of the “gross income” reduced by deductible costs and expenses.

The **accrual basis accounting:** is the most commonly used accounting method, which reports income when earned and expenses when incurred, as opposed to cash basis **accounting,** which reports income when received and expenses when paid.

**Territorial taxation (see also worldwide taxation):** Principle according to which tax is levied by one State only on income deemed to originate in its territory. It is of international tax practice that the jurisdiction to tax on non-residents is limited to territorial income while it can be extended to worldwide income as regards residents.

Territorial taxation also refers to the rule according to which enforcement of tax law is limited to the territory of the taxing country.

**Worldwide taxation (see also territorial taxation):** Principle according to which tax is levied by including income from all sources, i.e. irrespective of their geographical origin. Most countries tax worldwide income of residents.
