

Fellow in Biostatistics or Statistics

EORTC promotes multidisciplinary cancer research in Europe. EORTC research is conducted in over 300 university hospitals in 32 countries. Its network of investigators comprises more than 2500 scientists and clinicians collaborating in 20 multidisciplinary groups.

The EORTC offers a **one-year research fellowship** (renewable to a maximum of 3 years) to conduct research on pooled databases of trials and cohorts from EORTC and partner research organizations. The aim of the project is to develop and validate models to predict patient long term outcomes using modern methods that account for the complex structure of the databases.

- The ideal candidate – under 35 years of age – would have a Master's degree in biostatistics or PhD or equivalent science degree with excellent statistical skills.
- Ability to work independently, under supervision of a senior statistician
- Knowledge and/or experience of survival data analysis is an asset
- Previous experience with the use of SAS is required.
- A very good knowledge of English is also essential.
- The candidate is should also be willing to manage the practical organization of the project in liaison with partner organizations
- The candidate is also expected to contribute to writing scientific communications

The fellowship offers an excellent opportunity to learn the methodology of cancer clinical studies by participating in the activities of the statistics department and being immersed in the activities of an international academic research organization.

Support to the fellow is provided by a multidisciplinary staff including medical doctors and biostatisticians. The fellowship will take place at the EORTC Headquarters in Brussels, Belgium. Please send a curriculum vitae, a letter of intent and two letters of recommendation to:
